

Über dieses Buch

Dies ist ein digitales Exemplar eines Buches, das seit Generationen in den Regalen der Bibliotheken aufbewahrt wurde, bevor es von Google im Rahmen eines Projekts, mit dem die Bücher dieser Welt online verfügbar gemacht werden sollen, sorgfältig gescannt wurde.

Das Buch hat das Urheberrecht überdauert und kann nun öffentlich zugänglich gemacht werden. Ein öffentlich zugängliches Buch ist ein Buch, das niemals Urheberrechten unterlag oder bei dem die Schutzfrist des Urheberrechts abgelaufen ist. Ob ein Buch öffentlich zugänglich ist, kann von Land zu Land unterschiedlich sein. Öffentlich zugängliche Bücher sind unser Tor zur Vergangenheit und stellen ein geschichtliches, kulturelles und wissenschaftliches Vermögen dar, das häufig nur schwierig zu entdecken ist.

Gebrauchsspuren, Anmerkungen und andere Randbemerkungen, die im Originalband enthalten sind, finden sich auch in dieser Datei – eine Erinnerung an die lange Reise, die das Buch vom Verleger zu einer Bibliothek und weiter zu Ihnen hinter sich gebracht hat.

Nutzungsrichtlinien

Google ist stolz, mit Bibliotheken in partnerschaftlicher Zusammenarbeit öffentlich zugängliches Material zu digitalisieren und einer breiten Masse zugänglich zu machen. Öffentlich zugängliche Bücher gehören der Öffentlichkeit, und wir sind nur ihre Hüter. Nichtsdestotrotz ist diese Arbeit kostspielig. Um diese Ressource weiterhin zur Verfügung stellen zu können, haben wir Schritte unternommen, um den Missbrauch durch kommerzielle Parteien zu verhindern. Dazu gehören technische Einschränkungen für automatisierte Abfragen.

Wir bitten Sie um Einhaltung folgender Richtlinien:

- + *Nutzung der Dateien zu nichtkommerziellen Zwecken* Wir haben Google Buchsuche für Endanwender konzipiert und möchten, dass Sie diese Dateien nur für persönliche, nichtkommerzielle Zwecke verwenden.
- + *Keine automatisierten Abfragen* Senden Sie keine automatisierten Abfragen irgendwelcher Art an das Google-System. Wenn Sie Recherchen über maschinelle Übersetzung, optische Zeichenerkennung oder andere Bereiche durchführen, in denen der Zugang zu Text in großen Mengen nützlich ist, wenden Sie sich bitte an uns. Wir fördern die Nutzung des öffentlich zugänglichen Materials für diese Zwecke und können Ihnen unter Umständen helfen.
- + *Beibehaltung von Google-Markenelementen* Das "Wasserzeichen" von Google, das Sie in jeder Datei finden, ist wichtig zur Information über dieses Projekt und hilft den Anwendern weiteres Material über Google Buchsuche zu finden. Bitte entfernen Sie das Wasserzeichen nicht.
- + *Bewegen Sie sich innerhalb der Legalität* Unabhängig von Ihrem Verwendungszweck müssen Sie sich Ihrer Verantwortung bewusst sein, sicherzustellen, dass Ihre Nutzung legal ist. Gehen Sie nicht davon aus, dass ein Buch, das nach unserem Dafürhalten für Nutzer in den USA öffentlich zugänglich ist, auch für Nutzer in anderen Ländern öffentlich zugänglich ist. Ob ein Buch noch dem Urheberrecht unterliegt, ist von Land zu Land verschieden. Wir können keine Beratung leisten, ob eine bestimmte Nutzung eines bestimmten Buches gesetzlich zulässig ist. Gehen Sie nicht davon aus, dass das Erscheinen eines Buchs in Google Buchsuche bedeutet, dass es in jeder Form und überall auf der Welt verwendet werden kann. Eine Urheberrechtsverletzung kann schwerwiegende Folgen haben.

Über Google Buchsuche

Das Ziel von Google besteht darin, die weltweiten Informationen zu organisieren und allgemein nutzbar und zugänglich zu machen. Google Buchsuche hilft Lesern dabei, die Bücher dieser Welt zu entdecken, und unterstützt Autoren und Verleger dabei, neue Zielgruppen zu erreichen. Den gesamten Buchtext können Sie im Internet unter <http://books.google.com> durchsuchen.

This is a reproduction of a library book that was digitized by Google as part of an ongoing effort to preserve the information in books and make it universally accessible.

**THE
BERGMAN ÖSTERBERG
PHYSICAL TRAINING COLLEGE,
DARTFORD HEATH, KENT.**

Trustees:

Sir GEORGE NEWMAN, M.D. (Chairman).
Major WALDORF ASTOR, M.P.
Dr. CHRISTOPHER ADDISON, M.P.
Lord SHAW of DUNFERMLINE.
The Marchioness of SALISBURY.

Principal:

Miss M. H. MEADE, B.A. (Moral Sciences Tripos).

Vice-Principal:

Miss A. WIKNER (Royal Cent. Inst. of Gymnastics, Stockholm).

The College was opened in 1885, and was the first of its kind in England. Students are prepared to be teachers of Scientific Physical Education on Ling's Swedish System. The Course extends over two years. It includes the study of Anatomy, Physiology, Theory of Education; the Theory and Practice of Gymnastics, Massage and Medical Gymnastics, Dancing and Outdoor Games. Students practise teaching in schools in the neighbourhood. The College stands in its own ground of 15 acres, in a beautiful and healthy locality close to Dartford Heath.

The demand for mistresses of physical training holding the Diploma of this College is at present far in excess of the supply.

The course begins in September. Further particulars may be obtained on application to the SECRETARY.

**BERGMAN ÖSTERBERG
UNION OF TRAINED GYMNASIAC TEACHERS.**

Ling's Swedish System.

Aim of the Union: To advance the cause of Physical Education on scientific lines.

In placing members of this Union as Teachers in Schools, careful and discriminating choice is exercised, and the exact requirements of each School specially considered.—PHYSICAL TRAINING COLLEGE, DARTFORD HEATH, KENT.

SOUTHPORT PHYSICAL TRAINING COLLEGE.

Beautifully situated near the Sea in healthy surroundings.

President:

Admiral Lord CHARLES BERESFORD, K.C.B., M.P.

Principals:

A. ALEXANDER, F.R.G.S.; Mrs. ALEXANDER.

The Staff consists of Medical Lecturers and experienced teachers in every branch of Physical Training, including a Swedish Mistress from the Royal Gymnastic Institute, Stockholm.

GIRLS of good education are trained as scientific teachers of Physical Training to qualify them for appointments as Gymnastics, Games, and Health Mistresses in schools and colleges. The course, extending over two years, includes:—Physiology, Anatomy, School Hygiene, First Aid and Sick Nursing, Remedial Exercises and Massage, Swedish Educational Gymnastics (Ling's System), Outdoor Games (Hockey, Net-Ball, Cricket, Tennis, Badminton, &c.), Dancing (including Old English and Morris Dances), Swimming and Rowing, Organized Recreative Games for School and Play-Ground.

Diplomas and Gold Medals are awarded to successful students.

The demand for capable teachers of Physical Training is steadily increasing, and students of this College frequently obtain appointments before completing their training.

HEALTH STUDENTS.

Cases of spinal curvature or general physical weakness are received in residence, and treated under medical supervision.

Before selecting Textbooks, write for particulars or specimen copies of books prescribed for the Examinations contained in

The Oxford and Cambridge Edition.

The Senate Edition.

General Editor of the Series:
REGINALD G. GILL, B.A. (Cantab.), Barrister-at-Law.

FOR EXAMINATION PREPARATION.

QUESTIONS AND ANSWERS ON SHAKESPEARE'S

CORIOLANUS,
MERCHANT OF VENICE,
JULIUS CAESAR.

Each play is treated in the form of **Question and Answer**. Each play contains an **Introduction** by Canon AUGUSTUS JESSOPP, D.D., and an **Appendix** comprising a translation of the Commentary on that play by Prof. G. G. GERVINUS.

The Senate Edition of Shakespeare may be used with any standard text. No other Notes are required. Notes and Text may be open simultaneously ... each vol. 1s.

Other books will be issued as required for the Examinations.

A NEW READER FOR JUNIOR FORMS.

The Senate Edition. GREEK AND ROMAN GODS AND HEROES.

By P. C. SANDS, M.A., late Fellow of St. John's College, Cambridge. The aim of the writer is to introduce to pupils of 12 to 14 years of age the Stories of the Greek and Roman Gods and Heroes, and some account of Greek and Roman beliefs, and so not only to bring them into contact with a most beautiful series of legends but to enable them to understand allusions to classical lore in their later reading. With 8 full-page reproductions of world-renowned pictures and numerous other illustrations. Cr.8vo, cl., 10d.

The Oxford and Cambridge Edition.

The Epistle to the Galatians.

Edited by Rev. F. MARSHALL, M.A. With full comments on the Revised Version, Examination Questions for Senior Candidates ... 1 0

The Oxford and Cambridge Edition.

Shakespeare's Much Ado About Nothing.

Edited by Rev. F. MARSHALL, M.A., and R. G. GILL, B.A. With Notes on Paraphrase, Versification with full examples, Character Sketches, and Examination Questions ... 1 6

The Senate Edition.

"La Guerre," Vol. II.

A French Reader, compiled from articles upon the European War selected from the leading French Newspapers. With Notes on Idiomatic Sentences by TAYLOR DYSON, M.A. ... 10d.

The subject matter of this Reader from its retaining interest, leads the student unconsciously to a better knowledge of modern French construction. Many of the articles are of a conversational nature, and of the greatest value as supplying a means of acquiring a fuller vocabulary and a better knowledge of the subtleties of the language. Volume I is in use at all the great Public Schools.

Complete Educational Catalogue, Specimen Pages, and Guides to the "Local" Examinations Post Free.

HINTS ON FRENCH SYNTAX.

[May be used with advantage with **any** French Grammar.]

The following appears in

LE COURRIER: Bulletin de l'Institut Pédagogique International,
dated March 30, 1912:—

L'auteur disait dans la Préface de la 1^{re} édition: « Mon but a été non de développer, mais d'alléger l'étude de la syntaxe.» Le succès de l'ouvrage, dont on donne la 8^e édition, prouve évidemment que ce but a été atteint.

Les « notes sur la syntaxe » de M. Storr, remarquablement claires et précises, peuvent rendre de grands services non seulement aux Anglais qui apprennent la langue française, mais aussi aux Français qui étudient l'anglais. Nous n'hésitons pas à les recommander aux uns et aux autres.

LONDON: WILLIAM RICE, 3 Broadway, Ludgate Hill, E.C.

OCCASIONAL NOTES.

OUR first Note of 1915 was a tribute to Earl Roberts, who seemed to us to realize even more than Nelson the ideal of Wordsworth's "Happy Warrior." Again instinctively we turn to Wordsworth as the greatest of England's patriotic poets, the best interpreter of the soul of England in this her darkest day, her "exultations, agonies, and love and man's unconquerable mind." As a mystic, a dreamer who dwelt apart, Wordsworth can never appeal but to the few, and even true Wordsworth-lovers like Arnold found in him mainly a soothing voice, a healing power—one who, in an age of weltering strife, put by the cloud of mortal destiny that others fearlessly faced. This is a one-sided view, and we have to thank Mr. A. H. D. Acland for presenting Wordsworth as an ardent citizen, an enthusiastic volunteer, a champion of liberty wherever threatened, "to whom, during another life-and-death struggle, love of country was a passion, and whose highest hope was that our country should stand for a noble national ideal in the world."*

THE last debate in the House of Lords on the teaching of patriotism did not come to very much. The Archbishop of Canterbury and Lord Selborne had no difficulty in demolishing the complaint that nothing had been done to teach children about the War and its causes. With Lord Meath's view that Whitehall should issue instructions to teachers about the inculcation of right feel-

ing we have little sympathy. The thought of seeing on a master's desk a *Manual of the Teaching of Patriotism, compiled by Officials of the Board of Education*, makes our blood run cold. We would much rather leave it to the masters and mistresses. Officialism might stir up the few laggards, but would probably damp the zeal of the forwards. The feeling of the working classes is sound enough, witness Canon Swallow's tribute: "There is as much loyalty and eagerness to serve in the schools of Bethnal Green and Bermondsey as in Eton and Wellington College." Nor do Lord Selborne's platitudes about knowledge and character help us much. A remarkable event, which happened shortly after the evening of the debate, proved how thin such platitudes are. That event was the Merthyr election, which showed that what the nation needs in this particular conjuncture is not character, but knowledge and understanding. Since the working man has understood what the War is, he has been as ready as any one to do his duty. We have heard enough of the false patriotism taught in German schools, the lying professors and the tuned pulpits, and nothing is gained by enforcing these too well founded charges. The Board's advice to teachers to "inspire respect and sympathy for other nations" is more than ever needful. Had we had more respect at least for the virtues of the Germans, and more appreciation of their finer qualities, many things in this War might have been different. And sympathy and respect are impossible without knowledge.

LACK of knowledge is one of our great defects; lack of discipline is another. Observe the following passage from the newspapers:—"Questioned at a meeting of Hampshire agriculturists, Lord Selborne said he already knew that indescribable carelessness had been shown on the part of recruiting officers." These officers are presumably patriotic people, who would fall under no condemnation from Lord Meath and Lord Sydenham but whether their laches has not done more harm to the country than the Welsh coal strike, who shall say? Accuracy is a virtue which is at present at a discount in the schools of to-day. A wrong answer matters little so long as the method of working the sum is right. It is unfortunate that teachers seem so little alive to national defects, and that movements in education are so little directed towards curing them. We do not expect to hear much about discipline and knowledge at the January meetings. We shall probably hear a great deal more about the cultivation of individuality, which is, no doubt, one of the principal ends of education, but is not particularly what the Englishman wants. The Englishman is always ready enough to insist on his individuality; what he needs to learn is how to sink it when necessary, and how to do dull work thoroughly without showing "indescribable carelessness."

IT is satisfactory to learn that, in the case of teachers employed in any school or institution aided by grants from the Board of Education, effective arrangements will be made by which in any appeal from a local tribunal the Board will be consulted and have an opportunity of submitting its recommendations to the Central Committee before a decision is given. Further, as regards teachers who have been attested, the Board of Education will, through its Inspectors or otherwise, be freely con-

* *The Patriotic Poetry of William Wordsworth.* A selection by the Right Hon. A. H. D. Acland (Clarendon Press).

sulted by the Advisory Committees which have been set up to assist the local military authorities in determining whether individuals should be called up or should be regarded as indispensable and not called up. This provision should serve as sufficient protection against the unmanning of elementary schools and of the majority of secondary schools. Might not the same kindly offices be discharged by the Registration Council in the case of private teachers and others not within the purview of the Board of Education?

THE London Chamber of Commerce is appealing for contributions in support of its Commercial Education Department, and the Secretary, Mr. C. E. Town, sends us an open letter treating the relative positions of England and Germany as regards the world's commerce before and during the War. He shows by pertinent instances how in recent years the German has succeeded in monopolizing new fields of trade and commerce, as in the Argentine; and in threatening to oust the Englishman in old fields, as in India, thanks mainly to his superior education and special training. He shows, moreover, how, thanks to our Navy, German trade has decreased almost to the vanishing point—from eleven millions in the United States to £400,000 in the course of a year. This is a trite topic; but he also points out, what is apt to be overlooked, that Germany, apparently engrossed in the War, is all the while pursuing its preparations for annexing the commerce of the world. For example, it has sent seventeen of its professors to the Constantinople University to learn Turkish. It is indeed a remarkable fact that in the twenty years since the Chamber of Commerce instituted its commercial examinations the proportion of foreigners employed in British city houses has decreased from 55 to under 5 per cent., but the Chamber must not claim the whole credit. We have in England already too many examinations, and Bradford, with its humble school for waiters, has shown a more excellent way.

A CURIOUS illustration of the ineffectiveness of our system of elementary education occurs in an article in the *Times*, signed "A Yorkshire Tradesman." One reason, he says, why the last War Loan did not appeal to the working classes was that they failed to understand the terms used in the advertisements—"scrip vouchers," "stock certificates," "consols," "bonds," "percentages." The first two words might well puzzle them, but the others are plain enough. The statement certainly gives food for reflection. Arithmetic is one of the strong points, perhaps the strongest point, in the work of the elementary schools. North country people are generally supposed to be specially good at mathematics. Yet Yorkshiremen could not understand the simple terms on which they were invited to lend money to the country in its need. Distinguished people have charged them with want of patriotism, but a competent authority tells us that what they really lacked was knowledge and intelligence. We do not infer that the Yorkshire teachers are to blame; it is rather the system which cuts education short at fourteen that is at fault. These mechanics probably knew about "consols" and "percentages" when they left school, but they have forgotten what they learnt, and their minds have been made dull and unresponsive by monotonous toil. The moral is the need for continuation schools.

THE Governors of Bradford Grammar School have advertised for a head master at £1,000 a year. We do not consider the figure excessive, but we should like to know what are the next highest salaries paid in the school. The usual rule is that the remuneration of the most highly paid assistant master is fixed at about one-third of that of the chief. The result is inevitable—able men cannot be found for such posts, and the organization of the staff suffers. The head master of a large public school is too often in the position of a general of division without adjutant, quartermaster, or brigadiers. There are no assistants, except perhaps the head of the modern side, who are in any position of real power. Even if men are appointed as superintendents of the lower forms or organizers of the work in certain subjects, they are usually too nearly on a level with their colleagues to be able to assert their authority. Naturally so, seeing that position and salary are so little differentiated. The consequence is frequently chaos. The writer of this note can vouch for one public school where a few years ago some masters on the modern side were teaching languages by the direct method, and others by the old grammatical method. Our War Office has at times been a masterpiece of inefficiency, but not even the War Office has ever allowed the army to use two drill books at the same time.

AN interesting correspondence has been going on in the *Times* on the subject of commissions for school-boys. "A Public-School Master" led off by arguing that it was a mistake to take boys away from school at seventeen and seventeen and a-half, and put them into a position for which the great majority were not fit; Canon Swallow, in answer, spoke of "the school for discipline in the trenches"; Mr. Fletcher, of Charterhouse, had a word to say about the youngsters who had been invalidated home; Canon Waterfield followed on the same lines; Canon Wood, however, thought we kept our boys in leading strings too long, and quoted the practice of earlier times, and Major-General Tulloch backed him up. It is noticeable that ex-head masters supported the youthful aspirants and acting head masters opposed them. It makes us think that their natural dislike to losing their best boys counts for a good deal in the attitude of the latter. It seems to us a question on which no general rule can be laid down. Many lads of seventeen are fit, physically and morally, for strenuous work and responsibility; many are the reverse. Much also depends on the amount of training a youngster gets before going to the front, and on this point practice varies, and we imagine must vary, a great deal. Adherence to a fixed rule would no doubt save head masters some trouble, but we had always imagined that hard-and-fast regulations were just what public-school masters disliked most. The leaving age in a German *Gymnasium* is (or was) much higher than in an English public school. On the other hand, E. E. Bowen, of Harrow, a leading authority, held that boys stayed too long.

LOOKING at the question broadly, and without any particular regard for the conditions of the moment, we have no doubt that many boys are kept at the public schools too long. Very much to the point was an article by another "Public-School Master," which recently appeared

Commerce after the War.

Commissions to Schoolboys.

The Results of Elementary Education.

The Boy in Action.

in the *Westminster Gazette*, the text of which was a sentence in a letter from an old pupil: "We can soldier much better than we could ever work." The pupil might have put it more broadly: "We can act much better than we could ever learn." The master states it in psychological terms: "Such boys are quick and intelligent when it comes to the sort of thought which has to be immediately transformed into bodily action, or directing those actions on the part of others." And he goes on to argue that the best curriculum for such boys would be the study of agriculture, or engineering and military tactics, that they should learn foreign languages for practical purposes only, and read English literature for culture, not for scholarship. The general principle is, we believe, quite sound. The boy of whom the writer speaks is a characteristic English type, and a most valuable element in our race. It is this kind of lad who has made, and is making, the Empire. He demands our attention just as much as the budding scholar or scientist. He is fine raw material; we ought to make the very best of him. We would add that the problem is raised not merely by the difficulty so many boys find in studying books; it depends quite as much on the law of mental development, that to every human being there comes a moment when the capacity for learning is exhausted, and an imperious demand for action takes its place. It may be fourteen, sixteen, eighteen, but, except to the few who are students by nature, it is bound to come, and then the schoolmaster's work is over.

THE Vice-Chancellor of Leeds University contributes a pregnant article to the last Educational Supplement of the *Times*. He begins with a tribute to the great merits of German education. It is refreshing to find one man who is courageous enough, amidst all the cheap denunciations of the press and platform, to insist on the merits of the German system, while he is clear-headed enough to understand its defects: one educational leader who sees the beam in our own eye as plainly as he sees the mote in our neighbour's. On the intellectual side, says Dr. Sadler bluntly, British education is feeble compared with German, though less markedly so in Scotland than elsewhere in the Empire. Our weaknesses are the absence of an exacting standard in the training of the mind, uninstructedness of parental opinion, failure to develop second-rate intelligence (the opposite is a strong point with the Germans), inertness of mind towards science, and neglect of the social virtues, of infant life, and of thrift. Our fundamental need is a strong statesman devoted to educational reform, with a great body of public opinion behind him. The problem is how to get intellectual keenness into English life without interfering with the Englishman's energy, pluck, and independence of character. It is a weighty utterance, coming as it does from one whose knowledge of British and German education is probably greater than that of any man living.

WE have been analysing the list of speakers announced for the combined Conference of Educational Associations at the University of London, and the results are rather curious. The names of forty openers are given on the program. Of these only eight appear to be teachers in schools. The others are University professors, officials, secretaries of societies, lecturers in train-

ing colleges, and "miscellaneous." We have discovered the names of three assistant masters, one assistant mistress, and one head mistress of an elementary school. Possibly our analysis is not correct to the last figure, for there are a few names which are unknown to us, and to whom no description is appended, but it cannot be far out. Eleven chairmen or presidents are also announced. Of these two appear to be schoolmasters, one of whom is an art master and the other the principal of a private school. Amongst the remainder are a bishop, a canon, a lieutenant-general, two professors, two education officials, a retired colonial statesman, and an architect. Of the heads of public secondary schools we can find no trace.

WE have frequently insisted on the value of fresh air in the schoolroom for teachers no less than for taught. Teachers, going year by year over the same old ground, continually in contact with immature minds, and brought little into touch with the outside world, are only too likely to become "groovy," wooden-minded, and oblivious of public opinion. They need all the intellectual stimulus they can get, and addresses and lectures by eminent men are a valuable form of stimulus. We have not the slightest desire to shut the doors of our Conferences against bishops and generals, still less against professors and officials. We have never held the hard and narrow view that education is the business of teachers and of no one else. But when we see that of the persons in the front row at what is supposed to be a meeting of the scholastic profession about four-fifths are laymen, we are inclined to ask what has become of the teachers, and their claim to the authority of a learned profession. Their function in the rooms of the University of London will be apparently to "make a house." They will be there like good children—to be seen and not heard. Their position amounts almost to an abdication. The general public may be pardoned if they judge from the program that the Conference is not a professional gathering, but merely a means of providing a platform for various distinguished persons who are "interested in education." This is not the way for teachers to win respect for their craft or for themselves as a body. What would be thought of a meeting of the British Medical Association at which only one invited speaker in four was a physician or surgeon? We fear that in too many cases societies think more about a good "draw" and a large audience than about a businesslike discussion.

THE issue of a report by the Modern Language Association—or, strictly speaking, two interim reports—on the teaching of European history is a timely contribution to the discussion of a very important question. The authors do not, indeed, attempt to review the whole problem, but limit themselves to suggesting lines on which the modern language teacher can co-operate with the teacher of history, in whose hands the general responsibility for the subject must remain. The question is a complicated one, and here we can add only one or two remarks. First, we would say that no teaching of a foreign language which does not lead up to a knowledge of the foreign nation, its history as well as its literature, can be considered to have attained its end, except where the aim is purely utilitarian. In many schools probably little can be done to teach this history,

Dr. Sadler on
the Future
of Education.

Teaching of
Modern History.

The Conference
of Educational
Associations.

but where children stay at school till seventeen or eighteen something ought to be possible. Next, we must not attempt too much. It is strictly a case of cutting our coat according to our cloth. A systematic study of French or German history will rarely be possible. We should rather concentrate our efforts on great epochs, leading men, and the movements which have moulded the nation. Lastly, we need not be afraid of abridging English history to make room for some of that of other nations. There is much in the current textbooks which we could well spare. Complete ignorance about Perkin Warbeck, the Main and Bye Plots, the broad-bottomed administration, and even John Wilkes, would be a cheap price to pay for some knowledge of the Seven Years' War and the French Revolution.

WHETHER the language teacher agrees or not to leave the main responsibility to the history specialist, there is one point on which he ought to be emphatic. The history of a foreign country must be taught from the point of view of the people of that country, not from the English point of view; as a thing in itself, and not as an adjunct to our own story. To take an illustration. A boy usually hears a little about the Seven Years' War in the course of reading English history. But he hears about it only because this country was mixed up in it. England remains in his mind the centre, whereas the real thing needful is that he should be transported into a world of which Prussia is the centre, and that his mind should be concentrated on the Continental struggle. It is quite useless merely to tell him that the Continental struggle was extremely important. Generalities of that kind make no serious impression. The one thing that will make him feel its importance is detailed study, which will give him some sense of proportion. Nor must the language teacher forget that the spirit of a foreign nation can never be caught by reading English books. In history, as in literature, you can transfer fact and thought from one language to another, but you cannot transfer feeling—it dissolves in the process. Danton's orations in the Assembly, Frederick's speeches to his generals lose half their flavour when translated into English.

SCIENCE NOTES.

Mathematical Association. THE Annual Meeting of the Mathematical Association will be held on the afternoon of Wednesday, January 5, at the London Day Training College. Prof. A. N. Whitehead will deliver his Presidential Address, taking for his subject "The Aims of Education: a Plea for Reform." He will also present a paper on "The Allowance for the Earth's Rotation in the Theory of Projectiles." Mr. Palmer will describe the results of his inquiry into the degree of accuracy that may be expected in simple arithmetical work in boys' schools. It will be interesting to compare Mr. Palmer's results with Dr. Ballard's work on *Norms of Performance in Simple Arithmetic*. Dr. Ballard's investigations were made in London elementary schools.

Mathematical Tables for School Work. AT the above meeting, Mr. A. Lodge will invite discussion on the use of tables and on the desiderata in a book of tables intended for school use. This is a question which directly concerns teachers of physics and chemistry, and it is a pity that the time of meeting clashes with the visit of the Science Masters' Association to Messrs. Baird & Tatlock's glass works. There would

appear to be two aspects to the question—(1) the teaching of principles underlying the construction of the tables, (2) the use of the tables as a tool. Probably the first object—the understanding of tables—is best achieved by getting pupils to construct a few tables for themselves. In considering tables as tools, we would ask for tables of squares and reciprocals of numbers, as well as for logarithmic and trigonometric tables. We would have five-figure logarithms, co-logs, and antilogs. A conversion table for radians and degrees is wanted, and the trigonometrical functions should be given for each 10 minutes of angle, with an extra page giving each minute from 0° to 2° . Both natural and logarithmic functions should be supplied. There should also be a couple of pages, giving at one opening the principal constants used in mensuration, physics, and chemistry, with their logarithms. *Paterson's Tables* (Oxford University Press) might well serve as a model of typography, and we believe all the desiderata could be included in four dozen pages.

War-work in Schools. WE referred last month to the forthcoming discussion by the science masters of the modifications in the teaching of science in schools which may be desirable in order that war requirements may be met. We are now informed that Mr. C. L. Bryant has had opportunities of discussing the matter at the War Office, where the Director of Military Training welcomed the idea of giving to future officers some instruction during school in such topics as explosives, telephones, protection from poison gases, range-finding, &c. There appears every likelihood of useful schemes being devised and put into practice.

Science in Girls' Schools. WHILE it is probable that the effect of war on the boys' public schools will be to enhance the position of science, there is some danger that in girls' schools the science work may suffer. Certain Local Authorities, including the London County Council, are insisting upon reduction of teaching staff as a measure of War economy. We hear of a large school where this retrenchment will mean a class of thirty-five girls for laboratory work. Even if the improbable assumption be made that the laboratory is large enough, and the supply of apparatus sufficient, for such a number, all experienced teachers will agree that practical instruction of so large a number by one teacher must necessarily lose much of its educational value. Practically the class must be drilled, and heuristic teaching becomes impossible. In this connexion it is interesting to note that the Government of Ontario has just published a work on laboratory accommodation, in which it is stated that while England reckons twenty pupils to one teacher for laboratory work, the practice in the United States is to reduce the number to sixteen. We fear that for the sake of a small immediate saving, the training in science of girls in secondary schools will be seriously prejudiced.

How it Matters. THE general public and the daily press are not sufficiently aware that girls need science teaching. Perhaps the fact that much of the work is labelled "Botany," combined with recollections of a troublesome terminology used solely (in bygone days) for classification, has hindered appreciation of the work of the modern science mistress. "Botany" to-day means an introduction to the science of life—means that future mothers and teachers are learning the fundamental truths about nutrition, reproduction, and development which truths lie at the root of hygienic practice. At least in the case of the girls who specialize in science, the school work opens the way to broader horizons, gives practice in disciplined thinking, and increases the nation's not too great supply of doctors. In nearly every branch of research women have made discoveries, some of which are of world-wide importance. Many discoverers have attributed their success to an interest begun at the age of fifteen or sixteen, and it is impossible to gauge the harm which may be done by weakening the science teaching in girls' schools.

MR. JAMES BATES, Lecturer to the Royal Academy of Music, gave, on December 11, in the Duke's Hall, a lecture-demonstration on "The Phonetic Treatment of English Vowels and Consonants in Singing." The performers were a choir of fifty girls from the Wycombe High School, and the execution of songs and part-songs by English composers proved, in the most agreeable way, the lecturer's contention that, by scientific voice training, it is possible to secure a good tone, pure pronunciation, and distinct articulation. We hope that the audience, which consisted mainly of teachers of singing in schools, have taken the lesson to heart.

NOTES ON EDUCATION.

By "AN OLD FOGEY."

ANOTHER year, you remind me, has left its "shadow on the dial" since last I wrote to you, and your reminder finds me apathetic and doubtful—afflicted by a feeling akin to indifference towards the important questions discussed in your columns. Old men, one of the wisest among teachers tells us, ought to withdraw themselves from all civil and military negotiations, and live "at their own discretion without any obligation to any certain office!" In this remote village, where the casual observer might well imagine to-day to be but a repetition of ten thousand yesterdays, we are only beginning to realize our partnership in the Great War. We were slow to understand its concern for us; slower still to comprehend the necessity for personal service and sacrifice. It could hardly be otherwise. Our good people for generations have lived in the security of complacent peace. The slow current of their lives has been troubled by nothing more violent than a political agitation or a religious revival. They have been standing at ease, and the word of command fails to move them. Perhaps, however, "command" is not *le mot juste*; the call has been indirect and indefinite—an appeal rather than a mandate, a suggestion to act in an unfamiliar and uncomfortable way on behalf of abstractions. This, as far as I have been able to discover, is the general attitude of my careful neighbours. The heritages of freedom and of Empire are matters of course; they are natural rights, and not hard-won privileges. As to the price our fathers paid for them, we never learnt or have clean forgotten. That they can be menaced we do not seriously believe, and the idea of losing them is absurd! Having done so well in the easy past on the system of "do as you like" and "go as you please," we are unable to realize the need or the might of organized efficiency.

* * *

REQUIRED by ingenious leaders for so many years to hold in admiration and envy the pedagogic achievements of Germany, I am now told that admiration has been misplaced and envy ill founded. Enthusiasts and experts seem to be in much the same plight as the well intentioned prophet of magnanimity and peace, Lord Haldane. The educational system of our enemies, it seems, is diseased. Obedience to authority is a German virtue connoting suppression of all freedom in thought or action. It is the discipline of the drill sergeant as compared with the "higher and nobler discipline of self-control" which is the cardinal virtue of English education. The plague spot in German education may be, as Dr. Sadler tells us, its growing acceptance of the doctrine that might is right; that the end-all and be-all of a State is power, and that the State can do no wrong. The authority of the State, it may be, has misused schools for the propagation not of the gospel of humility, contentment, and goodwill, but of pride, conquest, and national aggrandizement. These things, however, if they be true, as in part they are, do not justify the conclusion that what Bishop Welldon describes as "organized efficiency" is a condition to be condemned and avoided, and the "happy-go-lucky," "wait-and-see" method a condition to be admired and perpetuated.

* * *

NOTHING, perhaps, as Dr. Sibly says, can compensate a nation for the loss of what Heine called the new religion of his time—"freedom." But, to maintain its freedom, a great nation may be obliged to regulate its affairs on a scientific basis, to organize its forces efficiently. Fifty years ago, when Matthew Arnold urged the necessity for State intervention in the domain of secondary education, he pleaded, as a preliminary, for a rationally planned and effective civil organization. He remarked: "Unlike in other things, Austria, Rome, and England are alike in this, that the civil organization of each implies at the present day a denial or an ignor-

ance of the right of mind and reason to rule in human affairs. At Rome this right is sacrificed in the name of Religion, in Austria in the name of Loyalty, in England in the name of Liberty. All respectable names, but none of them will, in the long run, save its invoker if he persists in disregarding the inevitable laws which govern the life of modern society."

* * *

I HAD occasion to refer to "Higher Schools and Universities in Germany" in connexion with a document which has agitated my colleagues during the past year. It is known as Circular 849. Since Matthew Arnold's illuminating *Essays* were written we have travelled a considerable distance along the road he advised. In 1888 we secured a civil organization; in 1899 a Minister, although not a Ministry, of Education; in 1902 primary and higher education became definitely a civic responsibility. A system of public secondary schools, to which he attached so much importance, has been inaugurated. Circular 849, I understand, proposes to organize the efficiency of these schools; to substitute for innumerable external examinations a single test which shall measure the work of a school at a particular period rather than the individual capacity of the pupil. Concurrently the test provides an examination upon which a certificate may be given to scholars of fifth-form capacity after not less than a three years' course. The proposal is received with grave suspicion by the adherents of "freedom, variety, and elasticity." Even that enlightened association of the associated, the Teachers' Registration Council, declare the present moment to be inopportune "for revolutionizing the educational methods of the country"; at any rate, they add, "in the direction of centralized bureaucratic control." Many years ago our enemies adopted this method of encouraging their higher schools to be of direct and definite service to the State. Of the value of an examination test of the kind proposed, wisely used in conjunction with thorough training, Matthew Arnold had no doubt. But, he said, no nation that did not honestly feel it had made its public secondary schools the best places of training for its middle and upper classes could institute it. Do we believe it is essential to train worthily and thoroughly non-commissioned officers and subalterns for commerce and industry, or do we deem it sufficient to leave the organization of their teaching to tradition or caprice? Are the secondary schools to be instruments in the production of national efficiency or only institutions providing free places for the proletariat and preliminary training for teachers!

* * *

I was asked recently what I thought of an article in one of your contemporaries proposing ways and means of educational revolution. It seems to me, I replied, to have been inspired by a member of the Teachers' Union, and written to gratify the educational levellers of the Trade Union Congress. It reveals, in fact, the confusion of thought, limitation of outlook, and pretentious dogmatism of those whose opinions are formed by the contemplation of labels. Our educational system as it stands (we are told) not only fails to make boys and girls into competent men and women, but so dulls their natural capacity that, before the age of thirty-five, many of them have become "incapable of work, of any form of sustained effort." This is the epidemic disease for which the educational system is supposed to be responsible. What of the remedy? The remedy, it is said, is to be found in the simple process of substituting "secondary" for "primary" education throughout the land! This is to be attained by an amalgamation of the primary and secondary-school systems—the larger proportion of elementary schools, that is, are to develop secondary branches to which children shall be compelled to resort until reaching the age of fifteen or sixteen.

* * *

THE foundations (we are asked to believe) are seriously defective, and it is supposed to be wise to increase the weight of the superstructure. Elementary schools, "as they stand,"

fail to make competent men and women; let us therefore, it is said, extend their operations and change their name. The success, so far as the system succeeds, is due mainly to the teachers; its failure, in so far as it fails, is also due mainly to the teachers. It is not a question of machinery, but of men and women. "There is really only one fundamental problem in . . . education, and that is to find the teacher." Unmeasured condemnation of the system "as it stands" is, for the most part, blatant nonsense. The system produces, or helps to produce, as large a proportion of competent men and women as any other system—or grade, secondary, technical, or higher. If a considerable number of people find their natural capacity dulled, or find themselves incapable of sustained effort, the reason must be sought not in the school, but in other directions.

* * *

WHAT, in fact, is the practical educational purpose divested of labels, codes, regulations, professional interests, and political expedencies? Briefly it is this: to assist all individuals to cultivate and to use for their own and others' benefit such powers and capacities as they may possess. In an ideal commonwealth the material conditions for all people would be equal; the early care and training of the children, in schools and elsewhere, would also be equal. This country, however, is not an ideal commonwealth, and proposals to effect the educational purpose on any such assumption are folly. The broad highway of educational opportunity, common to all, free to all, and traversed by all, is pleasing to contemplate. But it is the conception of "elusive idealism." It cannot be constructed unless the social and economic fabric of the nation is transformed. Legislation, therefore, to effect the educational purpose must be conditioned by the social and economic circumstances of the State.

* * *

We read about the inestimable advantages of education, of the great opportunities now existing, and also of an apparent reluctance of many to seize them. Investigating the matter one may arrive at this conclusion—Education is something of indispensable value to all mankind. Oblivious of its own interests, mankind is reluctant to accept it. Suppose, instead of education, we offered gold! Should we require by-laws to compel our kind to obtain it? Would they hurry from the centre of distribution at the earliest legal moment? Obviously not. They would jostle and crowd to secure the coins. And they would do so not because they wanted the coins to play with, but because the tokens could be exchanged for particular things they valued. To embark upon the perilous venture of applying the analogy, it may be that what we, the professors, the pedagogues, and the experts, are pleased to call education is not recognized by "the people" as of much value, as a token which can be used as a medium of exchange "for their own and others' benefit."

* * *

WHAT, broadly, are the social and economic circumstances of the State which must condition the provision of education? It is a big question for a small paragraph. But official statistics indicate that, with a population of 17,500,000 males, 11,500,000 are employed or employers. Of this total nearly 90 per cent. appear to be engaged in occupations chiefly concerned with manual operations; something over 10 per cent. follow pursuits which, in the main, involve mental work. Both divisions include innumerable degrees and exceptions—manual operations requiring a high development of mental ability, branches of mental work not demanding a particularly high order of acquired knowledge and trained intelligence. In the large army of those employed there is no hereditary title to, or bar against, position or promotion. But while the educational system must provide ample facilities and opportunities for "powers and capacities" distinctive or exceptional in character, to be available for use where they will render the best service to the community, the training sufficient for 90 per cent. will be insufficient for 10 per

cent.; and what is appropriate and necessary for the latter will not be appropriate and necessary for the former.

* * *

THE productive capacity of industrial toilers will not be increased, nor will the intellectual capacity of other workers be promoted, by the "levelling" process—by subjecting all classes to an elementary-secondary school course. What we have to do, if we can, is to render the system of primary education a satisfactory preparation for labour in the field, the factory, and the workshop; to systematize, strengthen, and develop secondary schools so as to produce for commercial and professional employments an adequate supply of thoroughly trained and competent young men and women. Let us endeavour to discover what educational tokens will be of exchangeable value for the many and provide them in the primary schools; let us assign a definite purpose and value to the training in the secondary school. But in the organization of the means to enable individuals to cultivate, and to use, for their own and others' benefit such powers and capacities as they may possess, we must look beyond the schoolmaster. If public education is organized with greater regard for employment, employment must be organized with greater respect for education. The efficiency of the worker will not be increased, as a rule, by prolonging the period of formal training in schools, and by deferring the beginning of industrial training in workshop or factory. But it will be improved if employers are persuaded or compelled to co-operate in the educational purpose. Employers should be required to arrange for the boys between the ages of fourteen and eighteen under their control to attend, as a necessary part of their occupational training, suitable classes on two mornings or afternoons each week. This "revolution" would be more effective, prove of greater practical utility, and be less disturbing to industry than an extension of compulsory schooling to fifteen. It would also establish a relation between education and employment which has hitherto been lacking and would promote national efficiency.

* * *

ANY proposal made in the interests of economy likely to impair the *quality* of educational arrangements should be rejected; any suggestion affecting only the *quantity* should be seriously considered. We attach undue importance to numbers. Thousands of pounds have been wasted in the "vain employ" of assisting young persons to progress from nowhere to nowhere at evening classes. Thousands of pounds have been wasted in providing schooling for children of very tender age. Many evening classes could be discontinued without detriment to the interests of national efficiency; compulsory schooling might, without disadvantage, begin at a later age. The necessity for occupying nine years for the simple process of laying a sure foundation of primary knowledge cannot be defended. Two or three years, beginning at the age of six, in a junior department, and five years in a senior department would be a rational and economical reform of primary-school organization. And who is prepared to say that this change would decrease efficiency?

* * *

NEARLY one-sixth of the children overcrowding primary schools are under six. Considerable economy, therefore, would be the result of raising the present age of compulsory attendance by twelve months. The *Observer*, I see, courageously suggests another method of relieving the growing burden of educational expenditure. It is not an economy, but the revival of an old source of revenue. Free schooling was an unnecessary concession to an imaginary demand. No one wanted it. Educationally, as well as financially, it was a blunder. The direct taxation represented by the small school-fee established a useful relation between the parent and the place where his child was taught. The responsibility invested school attendance with a value which was understood. But, I fear, the general reimposition of school fees would now be, in certain quarters, as unpopular as conscription. No Government with a proper regard for

its title to live and prosper, and with an appropriate respect for the susceptibilities of Trade Unions, could conscientiously propose it.

* * *

WHEN the ice broke and the genial Mr. Pickwick disappeared, Mr. Tupman, by way of rendering the promptest assistance, and at the same time conveying to any persons who might be within hearing the clearest notion of the catastrophe, ran across the country at his utmost speed, screaming "Fire." At this time of doubt and danger, when the ground on which we built securely seems to sink beneath our feet and some of our most cherished conceptions are shaken to the base, we must be prepared for educational Tupmans. But, whatever we may discover to be our weakness, and whatever may be necessary to renew our strength, there is one task which is essential, and which was some years ago lucidly defined by a distinguished statesman. It is the task of inducing the people of this country to bestir themselves "to add to their great natural capacities, to their natural and acquired advantages, and to the self-confidence of their ancient prestige some of that power which the passion for mental labour has conferred on their most formidable rivals, and to resolve that, in school and in University, in bank and in warehouse, in factory and in arsenal, a larger share of time and credit and influence and authority shall be assigned to intellectual effort and intellectual interest."

U. U.

THE PROBLEM OF THE NEW SECONDARY SCHOOL.

THE great increase during recent years in the number of secondary schools of a new type has raised many fresh problems in education. This new type of school has been called into being largely for the purpose of providing elementary teachers, and the problems it suggests are due mainly to the fact that the scholars are drawn from a lower social level than the pupils of the older type of secondary day school and the high school.

The fathers are rarely professional men or heads of commercial concerns. They are artisans, mechanics, miners, small shopkeepers, and day labourers. It does not follow from this that the children are dull or stupid. As a rule they are eminently teachable, but they labour under one grave disadvantage. They have to start with little or no foundation on which to build up a secure structure of knowledge. All the hundred and one ideas are wanting which are half-consciously imbibed by the fortunate child of the middle class in the nursery and during long and delightful holidays, from talks and rambles with well informed and obliging seniors. In many cases there are literally no books at home, and hence no means of escape from a rather hard and prosaic reality. Of course there are compensations, and the son of an intelligent artisan often comes to school with more knowledge of mechanism and rudimentary science than the son of the squire or parson.

But there is, none the less, lack of culture, and this comes home to the teacher chiefly in four ways—first, a general inability to get the core out of matter read; secondly, an extraordinary weakness in the power of expression, whether of thought or of feeling; thirdly, a "plentiful lack" of general knowledge entailing endless explanations in every English and history and geography lesson; fourthly, poverty of imagination, the consequence of narrowness of experience and ignorance of all great literature.

The remedy seems to me obvious. We must make good this defect by laying stress on the humanistic side, and in particular on English literature and history. And the question I would raise is whether these two subjects are allotted a sufficiently important place in the time-table of the new

type of schools. Do they, between them, balance science and mathematics?—for they certainly should at least do that.

I know it will be objected that, if any hours are deducted from science and mathematics, it will be impossible for pupils to take those subjects in the examination which is commonly the goal of their school career—at present generally the Oxford or Cambridge Senior. But this brings me to my next point—the number of subjects taken in that examination. It seems clear that the new secondary school should not attempt to teach so many subjects as the high school. Greek, of course, has gone, and in many cases Latin is not taught to all the children; but in place of these we have a great deal more science than in the old high school, and the result is overwork, with its attendant fiends—dullness and cram.

Nor is this state of things forced on the secondary schools, so far as one can judge, by the demands of the examinations which mean so much here. A candidate may get a Senior Oxford Certificate by passing in five groups, and he may qualify for entrance to a training college at the same time and with the same number of subjects. But a study of the Supplementary Tables of the Oxford Senior reveals the fact that most candidates offer from eight to ten subjects. To be precise, it is necessary to take only (1) arithmetic, (2) English, (3) history, (4) geography, and (5) *either* French, mathematics, science, or Latin. Most candidates take seven of these, and make up the tale with divinity and drawing! My point is that, since the scholars in secondary schools are obviously handicapped at the start, it is unwise to ask as much of them as of the high-school pupils. By all means let the brilliant ones take as much as they can, but, for the great mass, I am sure overwork and bad work are the results of the present system.

The remarks of the examiners at the end of the Oxford Supplementary Tables bear out my contention, I think. These speak of a "tendency to inaccuracy of thought and statement which characterizes to a growing extent the work done in the examination." They warn teachers that "pupils need to be trained to use other faculties besides the memory," and, under the different subject headings, the same tale is repeated—too much memory, too little thought. "A superficial acquaintance" with one science is deprecated, and in mathematics problems are said to be "solved correctly, but often mechanically."

I do not suggest for a moment that science does not provide valuable training for the mind, nor that it should be removed from the time-table to make room for those additional English and history lessons that are so necessary. The mistake is in taking up too many branches of science, and I will quote once more from the examiners' reports: "There is still a large proportion (of candidates) whose knowledge is entirely inadequate; they would be far better employed in learning the elements of their subject than in attempting to hurry over the field required for this examination."

What, then, is the practical solution? For a child fresh from the elementary school it is a mistake to begin simultaneously French, mathematics, and science, and the usual curriculum of the first year seems to him overwhelming. A great deal more reading—reading of English classics, especially the poets, and reading aloud—and a great deal of oral composition might take the place at present occupied by one or even two of these new subjects. Then, in the second year (average age twelve years), even if the full syllabus be started, there should still be a decided preponderance of history and literature. After this, if the balance be that suggested above—i.e. English and history to balance mathematics and science—much will have been done to make good the weak side. Then, in the senior year, strengths and weaknesses being now well known, there should be no attempt to induce any but the most active minded to take the full syllabus. Reading circles and debates might be arranged in free hours for the others. It should be a higher distinction to pass in all the five or six or seven subjects taken than to present ten and fail in five or even three. That such results would follow I am certain, with marked benefit to

both the minds and the bodies of children rescued from the present system of over-pressure.

For consider that at present the average secondary-school boy has his thirty-five lessons a week, and commonly twenty or more preparations also—five and a quarter hours' application at school and two hours at home every day except Saturday; and, where there is Saturday morning school, there is generally Saturday evening preparation too. What wonder that he chooses the easiest path and trusts rather to memory than to reason! What wonder that he seldom opens a book for pleasure! What wonder that the "satisfactory" pupil, under such a system, often tested, proves unsatisfactory from every point of view save that of the examination hall!

EDITH TURNER.

CONFERENCES OF HEAD MASTERS.

THE Conference of Head Masters was held at the Board of Education on Wednesday and Thursday, December 22 and 23; 80 head masters attended. The meetings were private, but the following report appeared in the *Times* of December 24:—

Mr. Francis (Blundell's), seconded by the Head Master of Cheltenham, moved:—

"That in the opinion of this Conference very grave loss to the country is caused by the employment of young students of exceptional mathematical and scientific ability as subalterns in Line battalions."

He said there had been a waste in contracts, rations, pay, and allowances, and in the wholesale employment of married men. There had been waste in calling young medical students to the colours at a time when the hospital and medical staffs were depleted, and in giving commissions to lads of seventeen when officers were ready to hand in such units as the Public Schools Corps, but were kept back by their commanding officer for the sake of the picturesque anachronism, a *corps d'élite*. He had been told, for example, that the Liverpool Scottish had lost more potential officers than could be raised by a normal Woolwich or Sandhurst entry.

The waste was still more serious in the case of young men of exceptional ability, gallant soldiers, no doubt, but a most precious asset of the country not to be gambled away lightly. The place for the man of action was at the Front, that for the man of great literary ability was elsewhere. The place for the young man who had a special gift for science, mathematics, or mechanics was in the laboratory. Our school heroes, leaders of boys, had fallen where they should have fallen, leaders of men. Many of them might have been statesmen of the future, but they needed above all things a country to adorn. But this was eminently a war of science, and the mathematical and scientific ability of the country should be husbanded jealously. He had received many letters from two Cambridge science scholars. They had been claimed for the Munitions Department, but their commanding officer in a service battalion had refused to let them go. We wanted better co-ordination or, rather, more subordination. If the War had taken place eighty years ago men might have read, "Died of dysentery, Second Lieut. Alfred Tennyson," or "Killed in Flanders, Charles Darwin, attached to the R.A.M.C.," had there been such a body. Many of those present must have been haunted by the line, "So that the brute bullet broke through the brain that would think for the rest."

It might be said that with the end of the War the need for such men would be less pressing, but the fact was that the present warfare in the field would be child's play to the grim commercial struggle which the Germans with a far-sighted concentration of purpose compelling our admiration were already organizing. Could we lightly face that industrial Armageddon robbed of the most ingenious and inventive brains of half a generation? One limited list before him contained the names of eighty-five old boys of this type killed and eighty suffering from other casualties. The proportion was startlingly different from the normal one of one killed to five other casualties, but it would be rash to hazard a surmise of its significance. The figures, however, supported the resolution. He would not have troubled the Conference with it but for his failure elsewhere. He had written a letter which appeared in the *Times*, appealed to the War Office and to the leading men at Oxford and Cambridge, but though they had agreed there was some step necessary they would take no responsibility.

The resolution was carried unanimously.

A resolution urging a slight lowering of the standard of Pass Examinations during the War and requesting the War Office to formulate a detailed syllabus of work for older cadets in the Junior Division of the Officers' Training Corps was withdrawn after an address by the Commandant of Woolwich.

On the motion of Mr. Vaughan (Wellington), seconded by Sir John McClure (Mill Hill), it was resolved that the Conference should consider the best means of reducing the expenses of school life and that its members should seize the opportunity of promoting simplicity of living and industry in the English public schools.

THE INCORPORATED ASSOCIATION OF HEAD MASTERS will hold its twenty-fourth Annual General Meeting at the Guildhall on the 4th and 5th inst. The President for the year, Mr. W. W. Vaughan, will deliver his Inaugural Address on Tuesday, at 11 a.m. Sir John McClure will move resolutions drafted by the Federal Council concerning War Economies in Education, and Mr. F. B. Malin (Haileybury) will move that military training in secondary schools should be reorganized under the direction of the War Office. On the Wednesday the Rev. H. J. Chaytor (Plymouth) will move that it is inexpedient to abandon the teaching of German in secondary schools, and the Rev. W. A. Parker Mason (Hulme, Manchester) will move that to every secondary school a paid medical officer be attached to supervise and report periodically to the head master on the health of each pupil. Mr. W. H. Barber (Leeds Modern School) will move that in the First Examination under the Board of Education Scheme (Circular 849) a reasonable amount of attainment in Group 1 and any two of the remaining groups should entitle the candidate to a pass.

CONFERENCE ON JUNIOR SCHOOLS.

AT the invitation of the Froebel Society a Conference has been held to discuss the provision of junior schools. The subject, it may be remembered, was first mooted at the last Conference of the Head Mistresses' Association, and was further debated in the Education Section of the British Association; and there was a consensus of opinion that there was a grievous lack of schools both for boys and girls whose parents intended to carry on their education beyond the elementary stage; but as to how this defect should be made good, whether by private effort or by State aid or intervention, opinions differed widely.

A number of distinguished representatives agreed to serve. The only serious omission in the list is the N.U.T., a body which, if any scheme evolved depends on Government grants, will have much to say on the matter. The Conference has held two sittings at the offices of the Society, and will meet again early this year. The sittings were private.

Representatives.

Head Masters' Conference—The Rev. Lionel Ford, Harrow School.

Head Masters' Association—The Rev. C. J. Smith, Latymer Upper School.

Head Mistresses' Association—Miss Leahy, Croydon High School; Miss Paul, Clapham High School.

Association of Preparatory Schools—Mr. F. Ritchie, Secretary.

Private Schools Association—Miss Millard, Wendover College, Howes Park.

Teachers' Registration Council—Miss James, Froebel Society's representative; Mr. F. Roscoe, Secretary.

Parents' National Educational Union—The Hon. Mrs. Franklin; Miss Parish, Secretary.

Froebel Society—Mr. Montefiore (Chairman) and the following Members of Council: Miss Berryman, Notting Hill High School; Miss Brown Smith, Goldsmiths' College; Miss Escott, Sheffield High School; Mr. H. R. Hall, Hon. Treasurer of the Froebel Society; Miss Lawrence, Froebel Educational Institute; Miss Malin, Froebel Educational Institute; Miss Murray, Maria Grey Training College.

THE INCORPORATED ASSOCIATION OF ASSISTANT MASTERS will hold its Annual General Meeting on Wednesday, January 5, at 2.30 p.m., at Merchant Taylors School, Charterhouse Square. The main resolutions to be proposed are concerning Educational Economy.

JOTTINGS.

IT is hardly credible that H.M. Inspectors still continue to score "plow" and "program" as blunders in spelling, but the fact is attested by the President of the N.U.T., who writes a long article to justify these alternatives and to persuade the Board of Education to sanction as *tolérances* American spellings such as "color," "traveler," "center," "penalise." The tradition of the elders dies hard, and *mumsimus* is one of the last forts of folly.

THE REV. W. H. KEELING has resigned the Head Mastership of Bradford Grammar School in his seventy-sixth year and the forty-fifth of his mastership. Under him the School has increased in numbers from under a hundred to over six hundred, and, though his own training was purely classical, he was one of the first head masters to institute an efficient Modern Side. He also, from the first, welcomed and encouraged the entry of free scholars from the elementary schools. How completely this liberal policy has succeeded is shown not only by numbers but by recent Honour Lists. Thus in the last to hand, we find that Bradford won in 1914 ten open scholarships at Oxford and Cambridge, and in the Joint Board Examination was awarded thirty-nine Higher Certificates, with forty-five Distinctions. Bradford showed its appreciation of his services by conferring on Dr. Keeling the freedom of the City, and the University of Leeds granted him the rare distinction of an Honorary LL.D. degree.

BRADFIELD COLLEGE.—A portrait of the Rev. H. B. Gray, Head Master from 1880-1910, was unveiled on Saturday, November 27, in the College Hall by Lady Stamford. The present Head Master, the Rev. R. D. Beloe, read a letter from the Warden bearing testimony to the signal services that Old Bradfieldians, most of them educated by Dr. Gray, were now rendering to their country. More than a thousand were enrolled in our armies and many distinctions had been won. The War is an Aaron's rod, but it is strange that in the reports of the ceremony no reference was made to the two achievements by which Dr. Gray will be best remembered—the foundation of the Public Schools Emigration League and the Greek Theatre and Play. In all future histories of public schools the name of Gray will live as the true founder of Bradfield, coupled with that of Thring as the founder of Uppingham.

IN reply to a point raised by our reviewer (December, page 728), Mr. J. P. H. Peet has kindly referred us to a letter from W. H. Russell to Captain C. S. Heris (quoted in *Notes and Queries*, March 9, 1895). Sir William Russell writes: "I believe I may claim the authorship or parentage. . . . In a subsequent correction of the *Letters* published by Routledge, 1877, the words are 'thin, red line tipped with steel.' How they happened to be printed in italic I cannot say, but I certainly did not intend them for a quotation. The 93rd were the red line I wrote of at Balaclava."

CAMBRIDGE has one of the largest base hospitals in the kingdom (1,200 beds), and old Cambridge men will find it hard to resist an appeal from the Bishop of Ely, Sir Owen Seaman, and the Vice-Chancellor for renewed support of Cambridge Red Cross Society, the body on which the hospital has depended for all subsidiary services and supplies. Up to June last it had undertaken the transport service between ambulance trains and the hospital, maintained six

convalescent homes, and supplied in six months nearly 40,000 articles of clothing and comforts for the patients. Cheques, crossed "Cambridge Hospital Military Hospitals Assistants Fund," should be sent to the Hon. Secretary and Treasurer, Bernard Tennant, Esq., 14 Clifford Street, Bond Street, W.

THE *Educational Times* announces that until further notice it will be issued only four times a year. It is proposed to continue the mathematical section as an independent publication.

MISS JANE HARRISON has been following the fashion and learning Russian. What most impressed her in the language (we quote from the Cambridge Lecture since published) is the richness of the Russian verb in "imperfectives." We have one such tense in English: "I am going to church" is an "imperfective," expressing the process of actuality, of living in the act. "I go to church" is a "perfective," and states the fact coldly. The Russian verb explains or reflects the psychology of the people.

HERE is matter for the Modern Language Association to discuss at the Conference. Meanwhile we may recall some lines on Greek grammatical nomenclature that appeared in the *Journal* many years ago:

"Polyphloisboisterous Homer of old
Cast all his arguments into the sea,
Though he'd been firmly but courteously told
Perfect-imperfects begin with an e.
'What the digamma does any one care?'
The poet replied with a lordly stare;
And he sate him down by the wine-dark sea
To write a new book of the *Odyssey*."

BEFORE the War broke out the English nation was profoundly ignorant of foreign politics and indifferent to them, except when at some crisis her own interests seemed to be directly involved. In the spring of last year the Council for the Study of International Relations was formed, with Lord Bryce as Chairman. It has since been actively engaged as a centre and clearing house for information, in promoting reading circles, and otherwise stimulating public interest. All desirous of co-operating should communicate with the

General Secretary, Mr. Arthur Greenwood, 1 Central Buildings, Tothill Street, S.W.

A CORRESPONDENT bears witness to the interest aroused by a course of lectures on Our Oversea Dominions arranged for his pupils by the Principal of the Hendon Preparatory School, and urges other head masters to follow his example. The Victoria League (Millbank House, 2 Wood Street) would be pleased to supply the literature needed for the compilation of such lectures, or to suggest the names of competent lecturers.

Educational Pamphlets, No. 31, is the report by two of H. M. Inspectors on a special subjects centre for rural schools. The buildings and premises of a disused grammar school were altered and adapted for the new purpose, the cost being defrayed from the endowment of the ancient foundation. A yearly sum of £115 was also allocated by the scheme for maintenance and salaries. The subjects for boys are gardening, mensuration, Nature study, and handicrafts; for girls, laundry work, cookery, household management—all taught with an eye to practical application. Scholars number 180, drawn from eight schools, boys and girls in equal numbers. All attend one day a week. The cost per scholar is £2. 6s. 2d. Conveyance is a heavy item, and accounts for one-third of the cost. The Inspectors, head teachers, governors of the centre, and parents of the pupils all report the experiment a success. It has stimulated the intelligence of the scholars and their interest in the ordinary subjects, and indirectly it has raised the leaving age. The only weakness noted by the Inspectors is the want of sufficient co-ordination between the work of the centre and of the school. The Board of Education suggest that other trustees of rural charities might well follow the lead of X. Centre. Why is it anonymous?

ON December 30, Dr. William Garnett celebrated his sixty-fifth birthday, and retired from his office of Educational Adviser to the London County Council. Since 1893 he had held the same position under the London Technical Education Board, and when, in 1903, that Board was merged in the L.C.C., he continued his duties under other masters. This is not the place to record his many distinctions.

(Continued on page 24.)

BOOKS FOR THE STUDY OF FRENCH AND GERMAN

Elementary Reader of French History.

Edited, with Notes and Vocabulary, by F. M. JOSSELYN and L. R. TALBOT. 73 pages, with maps. Price 1s. 3d.

This book, while brief, will give pupils a good working knowledge of French history. The style is concise and direct, and provides suitable reading for any form.

Dix Contes Modernes des Meilleurs Auteurs du Jour.

Edited, with Notes and English Paraphrases for retranslation, by H. A. POTTER. 95 pages. Price 1s. 6d.

This collection of complete short stories gives an excellent example of the French language as it is spoken and written to-day.

The English paraphrases for retranslation into French are planned to give an ease and freedom of expression to the pupil, and to cultivate his ability to turn his English thoughts into French.

Daudet's Tartarin de Tarascon.

Edited, with Introduction, Notes, and Vocabulary, by B. CERF. 204 pages, with portrait. Price 2s.

This edition gives the text of Daudet's masterpiece complete. Young people will not fail to enjoy the drollery and irrepressible imagination of this typical product of Provence.

Rostand's Les Romanesques.

Edited, with Introduction and Notes, by H. LE DUC. xix + 101 pages, with portrait. Price 1s. 6d.

A delightful comedy, light in plot, and fascinating by the quality of its fleeting, fantastic, and at times exuberant verse.

The play is given critical consideration; the historical and literary allusions, the vocabulary and terms of expression peculiar to Rostand, and the more difficult French idioms are explained in the notes.

Glück Auf.

Edited, with Notes, Fragen, and Vocabulary, by M. MÜLLER and C. WENCKEBACH. xxiii + 235 pages, illustrated. Price 3s.

This popular elementary German reader aims to introduce the student at once to facts, ideas, and sentiments which are in close relation to German life, and to lead him to a knowledge and appreciation of what is choice and valuable in German literature.

German Reader for Beginners.

Edited, with Word Lists, Questions, Exercises, and Vocabulary, by M. H. HAERTEL. 204 pages, illustrated. Price 3s.

Modern German grammars for beginners often contain a large amount of reading in the form of short stories, but are, by their nature, prevented from presenting longer selections that have continuity of thought and vocabulary. The present collection of Märchen and poems has been prepared to meet this need.

Altes und Neues.

Edited, with Vocabulary, by K. SEELIGMANN. 125 pages. Price 1s. 6d.

A collection of simple yet interesting stories and poems suitable for first or second year reading in German. There are twenty-six selections in all, representing, among other popular German authors, Pröhle, Bohne, Trenkner, Grimm, Hebel, Bürger, Müller, Goethe, Schubert, and Uhland.

This book has proven one of the most successful and usable little readers that have been published for a long time.

Kleist's Prinz Friedrich von Homburg.

Edited, with Introduction, Notes, and Bibliography, by J. S. NOLLEN. lxxii + 172 pages. Price 2s. 6d.

By its historical position, its intrinsic excellence, and its fitness for use as a class text, this work may properly come first in the study of German drama since the death of Schiller.

The present edition is designed for advanced classes, capable of reading and understanding the play as literature.

Complete descriptive Catalogue of Modern Language publications sent on request.

GINN & COMPANY, ST. MARTIN'S STREET, LONDON, W.C.

A SELECTION FROM METHUEN'S LIST

ANCIENT AND MEDIAEVAL ART. A Short History. By MARGARET H. BULLEY. With 40 Illustrations and a Chart. Crown 8vo, 5s. net.

HOME AND STATE: An Introduction to the Study of Economics and Civics. By SUSAN CUNNINGTON, Wiston's School, Brighton, Author of "The Story of Arithmetic," &c. Crown 8vo, 2s. 6d.

OLD TESTAMENT HISTORY FOR USE IN SCHOOLS. By the Rev. W. F. BURNSIDE, M.A., Head Master of St. Edmund's School, Canterbury. Seventh Edition. Crown 8vo, 3s. 6d.

THE LITTLE HOUSEWIFE. By A. M. PHILLIPS and C. L. DEAN. Crown 8vo, 1s. 6d.

A FIRST COURSE IN ENGLISH. By W. S. BEARD. Crown 8vo, 1s. 6d. [Beginner's Books.

A JUNIOR ENGLISH GRAMMAR. By Canon W. WILLIAMSON, B.A. With numerous passages for Parsing and Analysis, and a chapter on Essay Writing. Fifth Edition. Crown 8vo, 2s. [Junior School Books.

JUNIOR ENGLISH. By F. J. RAHTZ, M.A., B.Sc., Senior Lecturer at Merchant Venturers' Technical College, Bristol. Twelfth Edition. Crown 8vo, 1s. 6d.

HIGHER ENGLISH. By F. J. RAHTZ, M.A., B.Sc. Tenth Edition. Crown 8vo, 3s. 6d.

ENGLISH COMPOSITION. By F. J. RAHTZ, M.A., B.Sc. Crown 8vo, 1s. 6d.

A CLASS-BOOK OF DICTATION PASSAGES. Selected by Canon W. WILLIAMSON, B.A. Eighteenth Edition. Crown 8vo, 1s. 6d. [Junior School Books.

ENGLISH LITERATURE FOR SCHOOLS. By E. E. FIRTH, History Mistress at the High School, Croydon, Author of "A First History of Greece." With 4 Maps. Second Edition. Crown 8vo, 2s. 6d. [Junior School Books.

ENGLISH LITERATURE. By F. J. RAHTZ, M.A., B.Sc. Crown 8vo, 2s. 6d.

SELECTIONS FROM ENGLISH LITERATURE. Vol. I (1350-1700). By F. J. RAHTZ, M.A., B.Sc. Crown 8vo, 2s.

SELECTIONS FROM ENGLISH LITERATURE. Vol. II (1700-1900). By H. N. ASMAN, M.A., B.D., Second Master of Owen's School, Islington. Crown 8vo, 2s.

TOMMY SMITH'S ANIMALS. By EDMUND SELOUS. With 8 Illustrations by G. W. ORD. Fourteenth Edition. Fcap. 8vo, 1s. 6d.

TOMMY SMITH'S OTHER ANIMALS. By EDMUND SELOUS. With 12 Illustrations by AUGUSTA GUEST. Seventh Edition. Fcap. 8vo, 1s. 6d.

HEALTH READINGS FOR ELEMENTARY SCHOOLS. By C. J. THOMAS, M.B., B.Sc., D.P.H., University Scholar in Medicine, Member of the Examining Board of the Royal Sanitary Institute. Fourth Edition. Crown 8vo, 1s. 6d.

A JUNIOR FRENCH GRAMMAR. By L. A. SORNET and M. J. ACATOS, Modern Language Masters at King Edward's School, Birmingham. Fourth Edition. Crown 8vo, 2s. [Junior School Books.

NOUVELLE GRAMMAIRE FRANÇAISE, à l'usage des écoles anglaises. By J. G. ANDERSON, B.A., Examiner to London University. Crown 8vo, 2s.

EXERCICES DE GRAMMAIRE FRANÇAISE. By J. G. ANDERSON, B.A. Crown 8vo, 1s. 6d.

BY ROAD AND RIVER. A Descriptive Geography of the British Isles. By E. M. WILMOT-BUXTON, F.R.Hist.S. With 12 Illustrations and 12 Maps. Crown 8vo, 2s.

THE DOMINION OF MAN. Geography in its Human Aspect. By E. PROTHEROE. With 36 Illustrations. Fourth Edition. Crown 8vo, 2s.

STORIES FROM ANCIENT HISTORY. By E. BOWYER, B.A., B.Sc., Assistant Master, Owen's School, Islington. With 2 Maps. Second Edition. Crown 8vo, 1s. 6d. [New Historical Series.

A FIRST HISTORY OF GREECE. By EDITH E. FIRTH, History Mistress of Croydon High School. With 7 Maps. Second Edition. Crown 8vo, 1s. 6d. [Beginner's Books.

A JUNIOR GREEK HISTORY. By W. HORTON SPRAGGE, M.A., Assistant Master at City of London School. With 4 Maps and 4 Plates. Crown 8vo, 2s. 6d. [Junior School Books.

A SHORT HISTORY OF GREECE TO THE DEATH OF ALEXANDER THE GREAT. By W. S. HETT, B.A., Assistant Master at Brighton College. With many Maps. Crown 8vo, 3s. 6d.

STORIES FROM ROMAN HISTORY. By E. M. WILMOT-BUXTON, F.R.Hist.S. Fourth Edition. Crown 8vo, 1s. 6d. [Beginner's Books.

AN INTRODUCTION TO THE HISTORY OF ROME. By H. N. ASMAN, M.A., B.D., Second Master at Owen's School, Islington. With 2 Maps and 14 Illustrations. Crown 8vo, 2s. 6d.

EASY STORIES FROM ENGLISH HISTORY. By E. M. WILMOT-BUXTON, F.R.Hist.S. Eighth Edition. Crown 8vo, 1s. [Beginner's Books.

A JUNIOR HISTORY OF GREAT BRITAIN. By E. M. WILMOT-BUXTON, F.R.Hist.S. Third Edition. Crown 8vo, 2s.

A HISTORY OF GREAT BRITAIN. From the Coming of the Angles to the year 1870. By E. M. WILMOT-BUXTON, F.R.Hist.S. With 20 Maps. Fifth Edition. Crown 8vo, 3s. 6d.

THE PAGEANT OF BRITISH HISTORY. By E. M. WILMOT-BUXTON, F.R.Hist.S. With 2 Plates in Colour and 8 other Illustrations. Crown 8vo, 1s. 6d.

THE ROMANCE OF BRITISH HISTORY; or, Britain's Rise from Savagery to Civilization. By JOSIAH TURNER. With a Frontispiece in Colour and 8 other Illustrations. Crown 8vo, 1s. 6d.

THE GROWTH OF MODERN BRITAIN. An Outline History of the British People from 1530 to 1910. By B. H. SUTTON. With a Frontispiece in Colour and 8 other Illustrations. Cr. 8vo, 2s.

THE DAWN OF MEDIAEVAL EUROPE, 476-918. By J. H. B. MASTERMAN, M.A., Professor of History in the University of Birmingham. With 12 Maps. Third Edition. Cr. 8vo, 2s. 6d.

THE CENTRAL PERIOD OF THE MIDDLE AGE, 918-1273. By B. A. LEES, Resident History Tutor, Somerville College, Oxford. With 10 Maps. Third Edition. Cr. 8vo, 2s. 6d.

THE END OF THE MIDDLE AGE, 1273-1413. By E. C. LODGE, Vice-Principal and History Tutor, Lady Margaret Hall. Third Edition. Crown 8vo, 2s. 6d.

EUROPE IN RENAISSANCE AND REFORMATION, 1453-1660. By M. A. HOLLINGS, M.A. Fourth Edition. Crown 8vo, 2s. 6d.

THE AGE OF THE ENLIGHTENED DESPOT, 1660-1789. By A. H. JOHNSON, M.A., Fellow of All Souls. With 11 Maps. Fourth Edition. Crown 8vo, 2s. 6d.

THE REMAKING OF MODERN EUROPE: From the Outbreak of the French Revolution to the Treaty of Berlin, 1789-1878. By J. A. R. MARRIOTT, M.A. With 10 Maps. Ninth Edition. Crown 8vo, 2s. 6d.

EASY EXERCISES IN ALGEBRA FOR BEGINNERS. Containing 3,500 Original Problems. By W. S. BEARD. Third Edition. Crown 8vo. With Answers, 1s. 9d.; without Answers, 1s. 6d.

EASY EXERCISES IN ARITHMETIC. Containing 5,000 Examples. By W. S. BEARD. Eighth Edition. Fcap. 8vo. With Answers, 1s.; without Answers, 1s. [Beginner's Books.

PREPARATIONS AND EXERCISES IN INORGANIC CHEMISTRY. By W. LOWSON, B.Sc., F.I.C., Assistant Lecturer and Demonstrator, University of Leeds. With many Diagrams. Crown 8vo, 2s. 6d.

THE COMPLETE SCHOOL CHEMISTRY. By F. M. OLDHAM, M.A., Senior Chemistry Master at Dulwich College. With 125 Illustrations. Ninth Edition. Cr. 8vo, 4s. 6d. [Textbooks of Science.

PRACTICAL PHYSICAL CHEMISTRY. By J. B. FIRTH, M.Sc., late Dalton Chemical Scholar, Manchester University; Assistant Lecturer and Demonstrator in Chemistry, Armstrong College, Newcastle-on-Tyne. Crown 8vo, 2s. 6d.

A FIRST YEAR PHYSICAL CHEMISTRY. By T. P. HILDITCH, D.Sc. (Lond.), F.I.C. Crown 8vo, 2s. [Textbooks of Science.

OUTLINES OF PHYSICAL CHEMISTRY. By GEORGE SENTER, D.Sc., Ph.D., Lecturer in Chemistry at Birkbeck College. With many Diagrams. Fifth Edition, Revised. Crown 8vo, 5s. [Textbooks of Science.

PHYSICO-CHEMICAL CALCULATIONS. By JOSEPH KNON, D.Sc., Lecturer on Inorganic Chemistry, Aberdeen University. Crown 8vo, 2s. 6d. [Textbooks of Science.

tions in science and in literature. It is sufficient to note that few officials have had so wide a previous experience. Not only could he speak to the Council as one having authority, but he was always ready to listen to the views of teachers, and to support all demands that he deemed reasonable. It will be no easy task for the Council to find a worthy successor.

THE HISTORICAL ASSOCIATION holds its Annual General Meeting at University College, Gower Street, on the 7th and 8th inst. On the Friday, at 4.30 p.m., Mr. Julian S. Corbett will read a paper on "The Teaching of Naval and Military History," and on the Saturday, at 10.30 a.m., Sir Charles Lucas will read a paper on "The Teaching of Imperial History." In the discussion to follow, Mr. T. Seccombe, Prof. Egerton, and Mr. J. R. Parkin have promised to take part.

THE *Highway*, in a special War Time Comradeship number, appeals to all members and friends of the Workers' Educational Association for aid to carry on and extend the work, especially in base hospitals and convalescent homes. The published correspondence shows how highly solid literature is appreciated. Donations in money or in books should be sent to 14 Red Lion Square, W.C., marked "W. E. A. War Time Fund."

A CORRESPONDENT writes:—I looked on Christmas Eve in the *Morning Post* for a full report of the Head Masters' Conference, but the meeting was not even mentioned. In its stead I found a Lay Sermon by E. B. Osborn, on the text "Forgive not your enemies." That he tells us is the true lesson of the Gospel which should be preached from every pulpit. "Modern Germany is wholly evil." "The bestial brutality of the German mind . . . have (*sic*) been shown *urbi et orbi*." "Across a thousand years of European history the remembrance of their foul and dishonourable warfare extends like the slimy track of a snail." "Germany is Sodom and Gomorrah on the grand scale." "Luther was but a prototype of Bismarck and other bullies," not to be compared with the Genevan humanist Calvin. The pity of it is that this sermon will be quoted in Germany to prove what hypocrites we English

are when we pretend to be scandalized by the utterances of Harnack and Eucken.

THERE is grim irony in the fact that amongst the cargo on the ill-fated "Arabic" was a large consignment of copies of the new edition of Kant's "Perpetual Peace," recently published by Messrs. George Allen & Unwin, Ltd.

"T. E. P." sends three mottoes for Christmas crackers to the *Times*. (1) An M.P. friend told him "with a wink" that his £400 a year was rated as "unearned income." Without the wink the cracker does not go off. (2) Tacitus "speaking of the ancient Germans uses the curious words *nulla cultus jactatio*." For those who have small Latin this might pass, but scholars will find nothing "curious" in the statement that German warriors were distinguished by their arms, not by their uniforms—wore, in modern parlance, plain khaki. (3) The gibe against the Government is intended only for readers of the *Times*.

Oxford Pamphlets, 1914-15, now number eighty-six, and the series is complete. Each is written by a scholar or an expert (for or we might in most cases substitute *and*), and they provide, without prejudice or rhetoric, the information about the War in all its bearings that we are all seeking. They may be had separately at prices varying from 1d. to 6d., or in sections (in stiff covers) price 1s. net. Mr. Humphrey Milford, Oxford University Press, will send particulars on application.

WINCHESTER COLLEGE.—Mr. Fort has resigned the post of Second Master. His long services to the Wykehamical body are too well known to need trite panegyric, but they will not be forgotten. The Rev. A. T. P. Williams, Fellow of All Souls College, Oxford, has been appointed his successor. A covered rifle range, presented by Lady Edward Cecil in memory of her son, killed at the front, was opened by Mr. Rudyard Kipling on December 11.

for best results.

"Florigene" has been successfully and continuously used for many years on Wood, Concrete, and Stone floors of every description, also on Linoleum and Cork Matting in Government and Municipal Buildings, and in all kinds of Schools, &c.

"Florigene" costs little, is easily and quickly applied, and saves time and labour.It is **IMPORTANT TO NOTE** that**ONE APPLICATION** of "Florigene" **ALLAYS** THE DUST and DIRT for **2 to 12 months**, according to traffic, not only during each sweeping (without Sprinkling of any kind) but also throughout all the intervening periods—which is of greater hygienic importance.**These sanitary, labour-saving, and economic advantages are NOT attained by sweeping-powders, or any other method.**

Not sticky—the ordinary daily dry sweeping alone required—Scrubbing being optional.

"Florigene" is strongly recommended by Medical and other expert authorities.**A Head School Mistress writes:—**

"I am glad to have the opportunity of recommending 'FLORIGENE.' We have used it regularly on both wood and linoleum, and found its effects most beneficial, both in laying the dust and preserving the surface. The linoleum scarcely shows wear after six years."

(Repeat orders since received.)

A Grammar School Head Master writes:—

"We have used your 'FLORIGENE' for several years in this School, and we have found it excellent in keeping down dust, which is now never to be seen anywhere. I believe the health of this School has been better since. The air is certainly more pleasant to breathe when movements are going on, there is also a great saving of labour in cleaning."

(Repeat orders since received.)

Class=Books for the Junior and Senior OXFORD AND CAMBRIDGE LOCAL EXAMINATIONS.

Mathematics and Science.

Algebra, Junior. By A. G. CRACKNELL, M.A., B.Sc., and A. BARRACLOUGH, M.A. 2s. 6d. With Answers. 3s.

"Maintains the high standard of excellence we are accustomed to expect from so well known a source. The treatment of the graphic portion is particularly good."—*Journal of the Assistant Masters' Association*.

Algebra, The School. By A. G. CRACKNELL, M.A., B.Sc., F.C.P. With or without Answers, 5s.
Also in two parts. Part I. 2s. 6d. Part II. 2s. 6d.

"The book is compiled in accordance with the latest views on the teaching of Algebra, and we have rarely come across a clearer or more satisfactory exposition of subject-matter."—*The Journal of Education*.

Arithmetic, The Junior. Being an adaptation of *The Tutorial Arithmetic* suitable for Junior Classes. By R. H. CHOPE, B.A. (With or without Answers.) 2s. 6d.

"Just as good a handbook on Arithmetic as the student can desire."—*Nature*.

Arithmetic, The School (Senior Local Edition). An adaptation of *The Tutorial Arithmetic* to meet the requirements of the Oxford and Cambridge Senior Local Examinations, and amplified by a large selection of miscellaneous examples arranged in Graduated Examination Papers. 3s.

"The best arithmetic for schools on the market."—*Mathematical Gazette*.

Botany, Junior. By Prof. F. CAVERS, D.Sc., F.L.S. 2s. 6d.

"Dr. Cavers has achieved a useful little book."—*Journal of Botany*.
"A very excellent volume. Practical to a high degree. The diagrams are very good."—*Schoolmaster*.

Chemistry, Junior. By R. H. ADIE, M.A., B.Sc. *Second Edition.* 2s. 6d.

"The results of fifteen years' experience of a thoughtful teacher are always valuable, and, as one might have anticipated, the book offers a thoroughly sound course of practical instruction."—*Nature*.

Geometry, Junior. By A. G. CRACKNELL, M.A., B.Sc. 2s. 6d.

"A simple treatment of the elements of geometry. A feature of the book is the number of questions which require a numerical answer, incorrect and careless work being thereby easily checked."—*Schoolmaster*.

Geometry, Theoretical and Practical. By W. P. WORKMAN, M.A., B.Sc., and A. G. CRACKNELL, M.A., B.Sc.

PART I. Covering Euclid I, III (1-34), IV (1-9). 2s. 6d.

PART II. Covering Euclid II, III (35-37), IV (10-16), and VI. 2s.

PART III. Covering Euclid XI. 1s. 6d.

"One of the best books on modern lines."—*Oxford Magazine*.

Heat, Junior. By J. SATTERLY, D.Sc., M.A. 2s.

"Affords a remarkably clear exposition of the main principles of the science, such as is required by elementary students."—*Secondary School Journal*.

Magnetism and Electricity, Junior. By R. H. JUDE, D.Sc., M.A., and J. SATTERLY, D.Sc., M.A. 2s. 6d.

"This little book makes a special point of fundamental principles, and is especially adapted to the needs of pupils making a start in the subject."—*Educational Times*.

Science, Junior Experimental. By W. M. HOOTON, M.A., M.Sc., F.I.C., Chemistry Master at Repton School. *Second Edition.* 2s. 6d.

"An excellent and workable two years' course in Experimental Physics and Chemistry."—*Educational News*.

Languages, History, and Geography.

English Composition, Junior. By E. W. EDMUNDS, M.A., B.Sc., Senior Assistant Master at Luton Modern School. 1s. 6d.

"This excellent manual makes plain for the young pupil the essentials of good writing. There can be no hesitation in classing the book as a distinctly workman-like production that can be heartily recommended as one of the best of its kind."—*Education*.

English Composition, Senior Course of. By E. W. EDMUNDS, M.A., B.Sc. 2s. 6d.

"Excellent devised and arranged."—*School World*.
"Teachers of English will find this a very useful book for practical classroom purposes."—*Schoolmaster*.

English Grammar, Junior. With Parsing and Analysis. By A. M. WALMSLEY, M.A. 1s. 6d.

"A simple and satisfactory grammar, which avoids most of the superfluity of naughtiness of the old grammarians."—*The Journal of Education*.

French Course, New Junior. By G. A. ROBERTS, M.A., Head Master, Russell Hill School, Purley. 2s. 6d.

"The book becomes a serious rival to those existing. It will probably win easily."—*Schoolmaster*.

French Reader, New Junior. By J. P. R. MARICHAL, L. ès L., and L. J. GARDINER, M.A. 2s.

"The co-operation of a French and an English editor has produced the happiest results."—*The Journal of Education*.

Senior French Course. By Professor ERNEST WEEKLEY, M.A., and C. GILLI, B.A. 3s. 6d.

This Course is designed for candidates preparing for the Senior Local Examinations. The text is substantially that of Professor Weekley's *Matriculation French Course*, but the exercises and passages for translation into French are different.

"A really excellent textbook."—*Teachers' Times*.

Geography, Junior, 1916-17. Including Outlines of Physical Geography, the British Isles, and Europe. By G. C. FRY, M.Sc. 2s.

"A capital book, written in simple language, and containing abundant sketch maps of the right kind."—*London Teacher*.

Geography, Senior, 1916-17. Including Principles of Physical Geography, the British Isles, and Europe. From the *Textbook of Geography* by G. C. FRY, M.Sc. 2s. 6d.

"Mr. Fry brings out the fascination of the broad view of geography."—*Literary World*.

History of England, School. By M. E. CARTER, Honour School of Modern History, Oxford. 3s. 6d.

Also in three parts as follows:—I, To 1603; II, 1485 to 1714; III, 1660 to 1910. 1s. 6d. each.

"The essential outlines of the subject are presented in the most easily digestible form."—*Guardian*.

Latin Course, New Junior. By J. V. THOMPSON, M.A., and LL. M. PENN, M.A. 3s. 6d.

"Admirably unites the more modern methods of teaching with those which have long stood the test of time."—*Educational News*.

Senior Latin Course. By A. J. F. COLLINS, M.A., and A. ROBINSON, B.A. 3s. 6d.

"Carefully planned and most capably worked out."—*Educational Times*.
"The book is business-like and well arranged. The examples for translation into Latin Prose are specially well chosen, and serviceable Vocabularies are provided."—*Guardian*.

THE JOURNAL OF EDUCATION.

A MONTHLY RECORD AND REVIEW.

SCALE OF CHARGES FOR ADVERTISEMENTS.

PUBLISHERS' ANNOUNCEMENTS—

Whole Page ...	£5 10 0	One Column (½ page) £3 0 0
Half Column (½ page) ...	1 15 0	One-Eighth Page ... 0 17 6
Per Inch in Column, 8/-.		

SCHOOL ANNOUNCEMENTS—

Scholarships, Official Notices, School Transfers, Partnerships, &c.—6d. per line; minimum charge, 5s.

Posts Wanted or Vacant.—30 words for 2s.; each 10 words after, 6d. *prepaid rate.*

Lectures, Classes, Non-Resident Posts, &c.—48 words for 3s.; each 8 words after, 6d.; *prepaid rate.*

An extra fee of ONE SHILLING is charged on advertisements with OFFICE ADDRESS.

If a receipt is required for an advertisement under 10s., a post card or a stamped envelope must be enclosed.

Advertisers are reminded that "Letters addressed to INITIALS or to FICTITIOUS NAMES, or to a CHRISTIAN NAME without a SURNAME," at Post Offices are not taken in, but are sent at once to the Returned Letter Office.

All Letters respecting Advertisements and Subscriptions should be addressed—
"THE PUBLISHER, THE JOURNAL OF EDUCATION OFFICE, 3 BROADWAY, LUDGATE HILL, E.C." Money and Postal Orders, on the Post Office, Ludgate Circus, E.C. should be made payable to WILLIAM RICE; Orders and Cheques may be crossed, "The London City and Midland Bank, Ludgate Branch." *Postage stamps can only be received at the rate of thirteen to the shilling.*

Notice must be given of all remittances through the Post Office from abroad, stating full name and address of the sender; and all Foreign Money Orders must be crossed for payment through a Bank.

Date of publication of next issue will be found at top left-hand corner of front page.

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C.

THE NEW HUMANISM.

By BENCHARA BRANFORD.

THE present world crisis will lead to a deep reconsideration of many aspects of human activity. Education must, with all calmness possible, make broad survey of its realm. Here we confine ourselves to a sketch of certain powerful tendencies, whose birth dates back to the Reformation and Renaissance, but whose maturity is still to come.

The resulting educational rebirth at the close of the Medieval period in Europe embodied, we take it, two essential ideals. One was fundamental, laying down the perpetual basis of culture; the other was supreme, expressing belief in the end and object of education. Fundamentally, it was held that the sources and instruments of culture were two—Nature, the inexhaustible environment of man, and human language, whether acted or spoken as drama and oratory, sung and recited as music and poetry, written and read as literature. Supremely, that the object of education was the complete flowering of the pupil as an individuality. The supreme object of educational interest was the personality of the pupil. From henceforth the genuine teacher must be a humanist.

From the Renaissance downwards (a veritable rebirth of the hellenic spirit) these two principles have survived as imperishable possessions of the human race. Two such penetrating conceptions could only develop further by enrichment on one side, by limitation or correction on another. The enrichment has been the gradual contribution or task of modern nationality, modern science, and modern industry, each of them in their evolution to a height and extent unprecedented in the records of human history. To modern nationality is owing the growing enrichment and broadening of the individualistic educational ideal of the Renaissance by the fertile conception of citizenship in its awakening to the problems of civic and national life. To modern science education owes its passion for experimental inquiry and inquisi-

tion into all forms of Nature, around man or within him, not only for application, but for its own indwelling interest.

From modern industry education is destined in rapidly increasing measure to enrich its domain by the development and incorporation of the perhaps two grandest elements of industry, the noble instinct of workmanship and service in the richly manifold industrial activities of the masses and the masterly spirit of organization and capacity to govern in their natural leaders, whether in associations of employers or unions of employes, together destined to evolve into great guilds of industry, national and international; and these not primarily as means of higher livelihood, but as veritable sources and instruments of new types of culture for the ennobling of human life.

These vast forces, thus briefly outlined, have successively given to the school and its pupils—and are certain to give in increasing intensity and fullness—primarily citizenship, literature, history, music, art, and drama; secondly, mathematics, geography, physical, chemical, and biologic science, and hygiene; finally, and latest, the arts and crafts (male and female),* and, though still in a rudimentary stage in most perhaps of the world's elementary schools, the spirit of organization and capacity to govern, as well as to be governed. This last element—of all the most difficult of attainment—implies the development of corporate institutions in the elementary school by which some share in the government is devolved upon the pupils.

In the socialized discipline of the "group" lies both an indispensable condition of self-government and a healthy limitation to the over-exuberance of individualism. It is also essential to remember that the administrative spirit in the economic sphere where profit is so rooted an element must undergo a deep transformation to fertilize the predominantly spiritual field of education, whether primary, technical, secondary, or tertiary (University).

Though thus sharply and broadly outlined, all these elements, we are fully aware, are necessarily commingled: act and react upon each other, and need, for their proper development, co-ordinating and creative activity both in teacher and pupil. No system is, of course, adequate to reality; but for the purpose of a practical polity we propose the system in question, imperfect approximation as it is, as preferable to the prevalent want of unity in the school curriculum.

We think it, however, indispensable at this moment of educational history to lay special emphasis upon the broad truth underlying our analysis, and this with a view to reaching some organic unity. In a word, the ultimate sources of culture, distinct though not isolated, are now increasingly recognized to be three: humanity itself (both as individual and as citizen), the occupations of humanity, and Nature; each of the three inexhaustible in interest.

The instruments of culture are correspondingly three: language (including music and literature of all kinds), the "arts and crafts," and the study of Nature. Of these three, Nature study ministers to the contemplative and recreative soul of man; the arts and crafts to his active or creative soul; while language is at once the supreme synthetic instrument of his world-wide contemplation and the synergic organ of his world-wide activities, thus preserving a healthy and happy balance between income and expenditure, rest and activity, leisure and work, recreation and creation.

The Folk-Humanist, the Craft-Humanist, and the Nature-Humanist.

But whichever be the source or instrument of culture used by the teacher, the educational experience of the race demands that the supreme object of interest shall be the pupil, both as individual and as citizen—not scholarship, nor science, nor skill. In this final and completed sense of the word, the teacher must from henceforth be a *Humanist* to develop in his pupils their completest humanity. Round this broad, common,

* Each art and craft has a masculine and a feminine aspect, complementary, not antagonistic, corresponding to the equal and different powers of man and woman.

and central truth alone, we believe, can educational theory and practice find and maintain organic unity.

Of teachers there are, therefore, three fundamental types, rarely, if ever, equally balanced in one personality: the Language or Folk-Humanist, the Nature-Humanist, and the Craft-Humanist. And by this we imply that a teacher should be a humanist primarily; scholar, naturalist, or craftsman secondarily. The pupil, not the subject, should be his first and last consideration.

The Dawn of a Second Renaissance in Education.

We turn for a moment from the beneficial and positive aspects of the central ideal common to the Renaissance and the Reformation—the supremacy of individuality—to its obverse side. The disintegration of the old hierarchical authority in Church and State, the rapid dissolution of the medieval organism of culture into a vast variety of relatively isolated, rich scientific specialisms, and in England the industrial revolution (now world-spreading in its tentacles), based on scientific inventions—the machine process—with gradual disappearance of the complete village community and its concomitant family disintegration in giant town and dwindling village,—all these symptoms of anarchy were also the accompaniments of the vast energies liberated at the Renaissance and Reformation in the relatively untrammelled individual.

But the opening of this twentieth century exhibits clearly a new Renaissance, at once masked and also stimulated by the present world-crisis, towards whose development we believe the contribution of education will be of considerable ultimate magnitude; and its broad lines may even now, we think, be traced. These contributions can be nothing less than the solidarity of education from kindergarten to University (symbolized by professional unity); the creation of new and fruitful ideals; the organic co-ordination of science, art, and citizenship, and, therefore, of the subjects of the school curriculum; and the development of the talents of children in their respective groups with a view to their fullest blossoming alike as individuals, workers, and citizens—citizens of their regional home, citizens of their nation, citizens of Europe, citizens of the world. For every subject that attains not to the widest spirit and prestige of humanism sinks permanently to the banalistic.

The Evolution of the Position of Subjects and Teacher in the School Curriculum.

As the life of the schools, though partly a cause, has yet been in the past mainly a reflection of the rest of the national life, our brief historical retrospect may serve to explain the process traversed in modern times as regards object, method, and organization by each essentially new subject as it enters into the school curriculum, and the corresponding position of the teacher in charge of it. Whether we take mathematics (as arithmetic, algebra, geometry, &c.), science (physics, chemistry, biology, hygiene, &c.), music, drawing, woodwork, or domestic economy, we find, on careful inquiry, broadly speaking, and remembering that some of the stages have been traversed in secondary, others in primary schools, that the subject has passed or is passing through the following stages:—

(1) The *utilitarian* order of development, forced upon the schools by external pressure; the appropriate teachers being lacking, the method of presentment is necessarily empirical, as used in practical application outside the "schools"; there is, however, a solid advantage in that the subject rests on a concrete basis of brute fact. In this stage the pupil is subordinated to the material.

(2) The *logical* order of development, as perfected by the Universities (or higher institutes); the method is here predominantly abstract and consequently premature for the schools; but there is the solid advantage that, having been transformed in the hands of a professional teacher, the subject is rationalized and gains recognition as of genuinely cultural value. In this stage the pupil is subordinated to the method.

(3) The *psychological* and *social* order of development;

psychological, as in harmony with the order of development of the nature of the individual pupil, and social as in harmony with the spirit of the order of the development of the subject by the human race. Adequately and broadly interpreted, these two orders (social and psychological) are, we believe, identical. In this final stage, the material and method each becomes truly subordinated to the personality of the pupils, in their individual and social blossoming. But this abiding truth emerges: that the pupil must humbly serve the subject ere he can grow to noble love and mastery of it, so that the third and final order must itself embrace the other two whilst also transcending them.

Corresponding are the three stages of the position of the subject in the curriculum:—

(1) Regarded by the schools as an unimportant extra, and often placed outside the regular time-table.

(2) Recognized as an essentially important element in education; often given, in consequence, an undue share of time and attention; and figuring on the time-table and treated as a relatively isolated and independent cultural entity.

(3) Duly co-ordinated with other subjects naturally allied to it; finally allotted its legitimate share of time and attention and merged, as a branch, into one of a few fundamental groups in a true educational and organic unity, created by manifold forces, external even more than internal* to the school, in harmony with the time-spirit.

We have traced the process baldly and in sharp stages. In reality there is continuity throughout. The passage from initial anarchy to final organic unity appears to be repeated at each large period of educational history. It may be added that the third and final stage (psychological, social, and organic) does not appear to have been fully realized in the present period of educational development, by any one subject in the curriculum—least of all by the more modern importations, mathematics, science, craft-work, hygiene and physical education.† The literary (or folk) subjects, with their obvious tendency to song, festival, and drama, are the present pioneers of the Renaissance of all subjects that is dawning.

Cautious but deliberate experiment in many directions in the schools, and further research into the profound significance of the "culture-epoch" principle in the Universities and training colleges, should both be given encouragement at the present time.

Finally, there are the successive stages of position traversed by the teacher of the subject:—(1) An external or part-time visiting teacher, in general poorly qualified and paid. (2) A member of the staff, but with inferior prestige, status, and salary. (3) A member of the staff, fully qualified, and either co-equal with the other teachers, in the upper forms of secondary schools: or in primary schools and the lower forms of secondary schools, the subject is finally held to be an essential element in the equipment of the ordinary teacher and here alone reaches its highest influence.

The "General" Teacher and the "Specialist." Two Extremes.

But to the development of this second alternative of the final stage—the demand upon the ordinary teacher to be able to take any subject of the curriculum—there inevitably arises a practical limit.

The natural desire for an all-round education and the constant pressure of economic considerations have produced the "general" teacher, while the increasing growth of human knowledge and activity has simultaneously produced the "specialist" teacher, with its corresponding difficulties in the organization of school work.

The final outcome at the present time is increasing anarchy

of school studies in many directions. No longer in any school does a type of really "general" teacher now exist in the old sense of competency to teach every subject to all ages of the pupil: but the specialists grow apace. Time-tables are becoming rapidly congested, and the form system (with or without re-forming for special subjects) is breaking down in some schools, while in others its substantial retention is maintained only at the cost of a natural reactionary tendency to throw overboard some of the modern subjects and return to the older, simpler, and unified types of curricula.

Clearly, some constructive policy is urgently called for. This can only be permanently successful if it is a reasonably sound co-ordination of the main tendencies of the time spirit. The consequent emergence of these largely subconscious tendencies into the daylight of full consciousness will greatly expedite the growth of the Renaissance whose beginnings we can already detect. It is a historical process, we take it, in harmony with the higher characteristic of normal human action, by which a peaceful and gradual evolution, at the end of a period of educational disintegration, renders unnecessary the reactionary violence of revolution.

The present conflict of studies in the schools, well symbolized by the numerous publications constantly produced on the educational function of the various isolated subjects, is the immediate effect of two prevalent extremes, the demand for a *general* teacher competent to take each of a great variety of mainly isolated studies, and, to counter-balance the superficial learning thus inevitably and increasingly produced, the simultaneous counter-demand for teachers who are merely *specialists* in one isolated subject or a small isolated group of subjects—teachers, therefore, apt to miss the breadth and richness of humanism.

A precisely similar social and educational problem confronts the world in all its spheres—political, economic, professional, and so forth; the evolution of a golden mean between shallow sciolism and narrow specialism, the final result of the disintegration produced by the excessive modern analytical thought.

On the other hand, in any reconstructive development pioneers would be prudent to bear ever in mind that the demand for the "general" teacher is an expression of humanity's undying instinct of the oneness of its universe, and the demand for the "specialist" teacher, an expression of its complementary instinct of the inexhaustible variety of that same universe.

Each instinct and demand must, therefore, be satisfied in reasonable and substantial measure. Deeply regarded, they are not antagonistic, but complementary, co-operating towards the greater variety and abundance, harmony and unity of life.

Fundamental Types of Culture.

But, viewed in separation, these two extremes are gradually becoming recognized as prejudicial to true culture, and a sensible, practicable mean between the two extremes must gradually be realized—a mean that embodies a reasonable measure both of breadth and depth. This, we venture to submit, can only be by the recognition of varying types of true, general culture, partly based upon the varying types of abilities found to be naturally existent in human beings, and partly based upon the eternal and primal sources of culture itself.

It is clear that the underlying principles must be practically discovered and applied to the problems of the education and training of the teacher before the solution can substantially affect the pupil, and, thereafter, the future citizen and his world.

The broad outlines of the solution of the more immediate problem we have already attempted to give in the preceding pages. They consist in the cautious and experimental application of the fundamental ideas and ideals underlying our conviction:—(1) that all teachers must be Humanists, to whom the individual and social blossoming of the pupil is the supreme object of their activity; (2) that there are three fundamental sources and instruments of culture—Language (or

* Such as the continuous pressure of economy of school time.

† Several of these are still so rudimentary as to be predominantly in the first or second stages. We may add, in view of our final synthesis, that hygiene and physical education will reach their fullest development and effectiveness when merged according to their three fundamental aspects under Folk Culture, Nature Culture, and Craft Culture.

Folk) Nature, and Crafts (the fundamental and primitive occupations of the folk); (3) that every teacher should reach a reasonable standard of culture in each of the three; (4) finally, that every teacher should have the opportunity of developing broadly, as a *Humanist*, any special talent, whether it be as Language (or Folk) Humanist, Nature Humanist, or Craft Humanist.

Broadly speaking, the too long repressed individualities of pupils can only become developed by the existence of individualities in the teachers; and the large numbers, apart from other considerations, indicate the urgent need for *grouping* of such abilities in a few broad types. Organization and training for occupations will exert additional pressure in this direction.

The practical application of the foregoing must necessarily be experimental and tentative.* If successful, its effect upon all kinds of training, as well as that of craft teachers, would probably be ultimately profound.

Synthesis of School Studies Forshadowed.

With a view to show more clearly the position, both in scope and limitations, we think craft teaching may fitly come to occupy in the schools, we sketch as briefly as may be the probable ultimate, though perhaps far distant, consequences of the gradual realization of our ideals, which, we repeat, we believe to be merely the making explicit of the varying dominant tendencies already in existence. Parallel and co-operating with the school transformation would, we assume, come about social and industrial reorganization in the great world, the dominant note of which we take to be the gradual organization of broad paths to the great groups of allied occupations with due scholastic and technical certification, a revival of the ancient guild spirit of group cohesion, but consistent with the Open Sesame of modern centuries, itself a return, in the industrial world, of the spirit of that broad catholic highway to the highest professional and spiritual posts in medieval times, when degrees were European and craftsmanship was cosmopolitan. The conservative instinct of man will ensure the group solidarity; the creative instinct will maintain the career open to the talent.

The curriculum would gradually cease to be a bundle of relatively isolated and numerous school subjects, with a time allotted to each more or less arbitrarily, but would instead become an organic unity of a few thoroughly co-ordinated sources of culture. The varying abilities of pupils and teachers would be considered in a few well marked groups naturally corresponding to these fundamental culture sources, but the supreme object of the teaching would be the production of Humanists in their different categories.

Some subjects now prominent as isolated elements of the curriculum would disappear as such, though receiving due attention in themselves at appropriate intervals, and others would gradually become transformed in substance and application. Chemistry, physics, biology, and geography, &c., would merge into unity under nature culture, and this not only in classroom and laboratory, museum, and workshop, but in home and garden, farm, field, and forest, mountain, sea, and mine. Here, indeed, folk craft and nature uniting in fertile union, "culture" would recover some of its primitive force and meaning as the cultivation of healthy plant and animal, with the inevitable beneficial reaction upon the mental, moral, and physical aspects of pupil and teacher alike—and supremely so in the home.

Perhaps the most important single type of Nature Humanist would ultimately become the physician (or teacher of health), the woman even more frequently than the man; for the great and noble traditions of medicine will definitely and increasingly enter and breathe new inspiration into the school.

Drawing and modelling, reading, writing, and counting as fundamental instruments of mental activity would be utilized in all three branches, folk (or language) culture, nature culture,

* Thus in practical application condition (1) above—that the special talent shall be developed in the future teacher as a *Humanist*—would be ensured by associating the University faculty (or subject) of Pedagogy with the particular group in question.

and craft culture. Mathematics would become considerably transformed, part of the present subjects being developed and applied under the stimulus of folk culture, part under the stimulus of nature culture, and part under the stimulus of craft culture. As applied to the last (craft culture) forms of mathematics, at present new to the schools, would arise more fitted to those pupils who have predominantly artistic abilities, such as the application of the geometry of position to design and decoration, a geometry once richly developed in Saracenic culture, and at length again attracting the attention of scholars.

The study of the evolution of the arts and crafts and their place in civilization would enrich the sphere of folk (or language) culture; the creative and constructive abilities of pupils would obtain scope not only in craft culture, but in folk culture, with drama, festival, and scenery. Under Nature study, the beauties of Nature would receive equal attention, with its truths. Under folk culture would also come the exercise and development of the pupils in creating and maintaining school institutions, where scope would be found, among other things, for the government by pupils of themselves.

Under craft culture, different types of schools in town and country or different branches of the same school would develop, according to circumstance and opportunity, one or more of the sub-branches as artistic handicraft, mechanical handicraft, architecture,* domestic craft and domestic organization (or homecraft), rural craft (gardening, agriculture, &c.), and so forth; and the principles and practice of co-operation, organization, and social and industrial government would find special scope in such well organized constructive activities.

In a word, the school would tend to become an idealized epitome of the best features of the great external world and a training of each pupil for that world, socially and individually and in harmony with the broad nature of his or her particular abilities and character.

In respect of the urgent need of the introduction of craftsmanship of all types into education, experience shows that of those boys—and the same is believed to be the case with girls—who show special facilities in:—(1) mechanical drawing; (2) actual workshop technique; (3) the creative impulse in art work, no matter how its expression were conveyed; (4) instinctive understanding of the meaning and use of the devices in modes, models, and mechanisms, a considerable proportion were not of the type labelled "clever" at school work; nay, regarded both abstract notions and books generally "as a plague and noisome pestilence." We have too much forgotten the existence of *l'homme machine* in the school, and too commonly been obsessed by him in industry.

The School as an idealized Model of the World and the World as a realized Model of the School.

Expressly do we speak of the school as an *idealized* epitome or model of the world, not merely the world of ordinary affairs, but the whole of humanity, body and soul, past, present, and future. For in its preparation for the present the school must nobly recapitulate the past and as nobly rehearse for the future.

Fatal to all fine spiritual development would be a successful attempt to transform the school, whatever be its type, general or technical, into a mere epitome or model of the present external world, however apparently efficient as judged by worldly and therefore temporary standards. A good school works for eternity; herein its majestic spirit must needs be different from the soul of business, justifiably seeking its temporary profits.†

* Here particularly should open out a new evolution of domestic architecture in the hands of women, too narrowly confined in the past to decoration and making of clothes for the body and textile furnishing of the home.

† An important and instructive struggle is proceeding in the United States on the relative merits of "vocationalism," and "liberalism" in the schools. We hold that a wide view harmonizes and embraces the good in each. Education is for livelihood and life.

To the express end of the maintenance of this distinction has humanity slowly and painfully evolved the spiritual organ known as the school, itself (including the Universities) but the deliberate extension and prolongation of that sacred private school where the child learns of goodness, truth, and beauty at the loving mother's side, the reincarnation of the ancient Vesta.

The school, that grand instrument and organ of man's creation, fails lamentably in its highest duty and privilege if the pupils leave without *incarnating* in themselves something substantial of those lofty spiritual ideals and objects of the race transmitted from teacher to teacher by the inextinguishable torch of learning. The dream precedes the deed; and the evocation of ideals in the soul within with the firm establishment of these by correlative activities in the body without—this is the magic wand of spiritual Wisdom that Alma Mater can give her children.

In this way can the school, humbly profiting by worldly wisdom and the mighty activities of the world without, in its turn mightily influence that world. If, then, our conceptions are sound and just, two conclusions would seem to follow. The school should evolve towards an idealized model of the world, and simultaneously the world should evolve towards the realized model of the school; perpetual and complementary tasks for the human race. The great statesman sees the nation as family writ large.

The Three Types of Teachers in the New Humanism.

We believe the time is coming when every teacher will be expected to reach a certain reasonable common standard in the three fundamental sources of culture—Scholarship (or Folk) Culture, Nature Culture, and Craft Culture—and that, in addition, he (or she) will be specially qualified in one of these branches, so that every teacher will be a Humanist, but a Folk Humanist, a Nature Humanist, or a Craft Humanist, according to his (or her) bent and character.

It may be desirable to add that this does not mean any addition to the tale of bricks the training college student has to complete at present; but its realization will become possible by a reorganization of curricula on the lines above mentioned. Thus will the teacher take the fullest joy in his vocation, and the talent of the pupil blossom in the sunshine of guidance and encouragement.

REVIEWS AND MINOR NOTICES.

The Elements of Style: an Introduction to Literary Criticism. By DAVID WATSON RANNIE. (4s. 6d. net. Dent.)

Style, as the word is employed in this treatise, signifies "expression and the translation of thought into language." Dr. Johnson, in his dictionary, defined style as "manner of writing with regard to language," and quoted Swift: "Proper words in proper places make the true definition of a style." The two definitions might seem identical, but Mr. Rannie insists that style is expression, not a quality of expression; and when Matthew Arnold speaks of a poet's "genius for style" he condemns this use of the word as a mere colloquialism. For a fuller exposition of the author's thesis we must turn to the last chapter, in which Buffon's famous dictum, "Le style est l'homme même," is expounded and amplified. Buffon does not mean, as he is vulgarly interpreted, that style is the idiosyncrasy of an author, the quality that marks him off as an individual distinct from all others of his age and country, but as the human element in writing—the power that informs and vivifies the subject-matter:

Spiritus intus alit totamque infusa per artus
Mens agitat molem et toto se corpore miscet.

It is frankly admitted that the whole of literary expression can no more be analysed or explained than can facial expression; yet, in spite of this indefinable and mysterious element,

the book justifies the assumption that there is option in style, that "style may be fruitfully treated, not as a mere indivisible and essentially indescribable jet of individuality, a kind of lightning stroke known only in its effects, but as a series of separable operations through which thought and emotion pass in process of expressional manifestation from intelligence to intelligence."

With this object in view, and to show the options open to the writer and the canons by which he must be judged, literature is first distinguished as poetry or prose, and then classified under the heads of: I—Poetry. (1) Epic or Narrative; (2) Dramatic; (3) Lyrical; (4) Didactic; (5) Poetry of Nature; (6) Poetry of Humanity. II—Prose. (1) The Oration; (2) The Treatise; (3) History and Biography; (4) The Essay; (5) The Prose Drama and the Dialogue; (6) The Novel; (7) Journalism.

A second part discusses the more formal elements of style, vocabulary, sentences, paragraphs—what is found in the ordinary manuals of rhetoric. In the third we return to the essentials of Style, Unity, Fashion, Originality.

In order justly to appraise the work it must be clearly borne in mind that the author's object is not to instruct the writer how to write, but to furnish the reader with a just criterion whereby he may appreciate what is written.

We may regret, at starting, that in spite of his general title Mr. Rannie has limited himself to English literature.

Aristotle's canons of criticism in the *Poetics* and *Rhetoric* are quoted, and there are passing references to the other Greek writers; but Virgil is the only Latin author mentioned. Not a single German poet or critic is named: not even Goethe or Lessing; and of Frenchmen—not only the greatest critics of style, but themselves the most perfect exemplars of prose style—only three are named in passing.

We may also take objection to the arrangement of the book, which requires that the same topic shall be treated under four or five separate headings.

The novel, even if its origin is traced back no further than Richardson and Fielding, is so Protean in character that it would seem impossible to classify it, still more to assign to it any canons of style that shall fit all classes. Here, on the analogy of poetry, there is a tripartite classification—the narrative, the dramatic, and the essayistic novel, and the common standard by which all three kinds must be judged is lucidity, proportion, and truth to life. The writer must make it clear to us what the meaning of the novel is, as a whole and in each of its parts. "Proportion" signifies plot and development of action and characters, as in a play, and "truth to life" connotes the exclusion of "all that is monstrous in character or palpably impossible in situation." Few novels, we may safely affirm, would satisfy all these tests, and masterpieces like *Monte Cristo*, *La Peau de Chagrin*, *Voyage à la Lune*, *La Révolte des Anges*, or *Les Misérables* (we prefer to take French types) would certainly not pass muster. So, when we are told that simile and metaphor must be most guardedly used by the novelist, we think of Meredith, and the postulate of "directness of expression" would bar not only Meredith, but all Henry James's later novels.

The "atmosphere" of a novel is justly defined as the unity of impression that it leaves upon the reader, but it is subsequently limited in meaning as dependent on scenery and on costume and manners. This appears to us an arbitrary limitation, and lovers of Jane Austen will hold that *Pride and Prejudice* and *Mansfield Park* have an atmosphere of their own no less than *Shirley* or *Esmond*. A Dutch interior of Mieris has an atmosphere no less than a landscape of Turner.

We have chosen the novel to criticize because it shows no less the high merits than the defects of the treatise. Thus, the analysis of *Tom Jones* and of Dickens's and Scott's novels is admirable, and there is no criticism at second hand. But the subject is too large for the canvas, and the impression left on us is that each part needs a volume to itself, as has *The English Novel*, by Prof. Saintsbury, in Messrs. Dent's "Series of Manuals of Literature."

Thus, at starting, Mr. Rannie joins issue with Prof. Saintsbury, and doubts the possibility of formulating the recurrences and regularities which constitute prose rhythm. Assuredly a Prosody of Prose has yet to be written, but we would gladly hear more of the matter. We cannot agree that the presence or absence of metre constitutes the essential difference between poetry and prose or that verse and poetry may be used as synonyms.

Again, we hesitate to accept the aphorism that poetry is egoistical and aims at self-expression, while prose is utilitarian and aims at profiting others. Primitive poetry was altruistic: the choric song, the charm or liturgy, the ballad or lay, the gnomic poem. What Goethe puts into his minstrel's mouth is, in a sense, true of all poets: "Ich singe wie der Vogel singt." The poet, *par excellence*, speaks out of the abundance of his heart, but the two strands are inextricably interwoven, and, to name at random a few world-classics, who would venture to classify Homer, Virgil, Dante, and Milton as egoistical, and Herodotus, Plato, Boccaccio, and Montaigne as altruistic or utilitarian? It is fully recognized that there is no hard-and-fast line of demarcation between poetry and prose and a large neutral zone occupied by the prose-poets, of whom Walt Whitman is taken as a type; but the argument would have been clearer had the apophthegm of Coleridge been borne in mind: the correlative of prose is not poetry, but verse.

The chapter on Translations is of special interest to us, and we would gladly have discussed it at length. The main thesis is that thought and language, matter and manner, are practically separable, and that multiple expression of the same meaning is possible, and the Authorized Version is adduced as a triumphant confirmation of the thesis. Pope's *Homer*, Dryden's *Virgil*, and Gilbert Murray's *Euripides* are adduced as proving that "a very large part of the essential meaning can be expressed truly, beautifully, and grandly in translation." We should hesitate to admit the latter instances. In any case, none of them satisfies the first canon accepted by Mr. Rannie for the translator: to be literal at every cost save that of absolute violence to our language. In the one example of an ideal translation here given for the Greek, "more quickly than a charioteer can complete two laps of the racecourse," we have "swifter than a runner runs his furlongs." It is hardly a paradox to affirm, at least in poetry, that the more perfect the expression, the more impossible is a translation. Who has translated or ever will translate Catullus' "Frater ave," Shakespeare's "Full fathoms five," Goethe's "Ueber allen Gipfeln," Heine's "Du bist wie eine Blume," Tennyson's "Break, break, break," Swinburne's "Now the hounds of Spring"? and the list of untranslatables might be infinitely extended.

We have already exceeded our allotted space, and said little of the concluding chapters on Unity, Fashion, and Individuality, which are the kernel of the book, and to which we can award almost unmixed praise. The parts on words, phrasings, punctuation, &c.—what may be called the grammar of style—seem to us, as we have hinted, the least illuminating. It is when he comes to the informing spirit, the very essence of style, that Mr. Rannie shows his originality, and fulfils the expectations he raised by his *Study of Wordsworth*.

The Greek Tradition: Essays in the Reconstruction of Ancient Thought. By J. A. K. THOMSON. With a Preface by Prof. GILBERT MURRAY. (5s. net. Allen & Unwin.)

These nine Essays cover such a wide range and raise so many vexed questions that it is impossible, in a brief review, to do justice to the volume. It would appear from the Preface that Mr. Thomson's earlier volume of *Studies in the Odyssey* was scouted by some pharisaical pedant as a disgrace to the University that published it because, forsooth, the author had not "given us the 'doctrine of the enclitic δε,'" and Prof. Murray, who has suffered in like way from the ancient grammarians, vindicates the higher scholarship which aims at interpreting a poem as a whole and revealing its significance, its beauty, and its genesis. Judged

by this standard, Mr. Thomson is indisputably a valuable aid to classical studies, and those who have read him, however widely they may differ from some of his conclusions, cannot fail to re-peruse their Hesiod, their Thucydides, and the *Alcestis* of Euripides in a new and fuller light.

The study of Thucydides is particularly illuminative. He combats the popular view of the historian as a cold-blooded onlooker, no more concerned in the events he was describing than Gibbon or Hallam. Undemonstrative, if you will, but not unemotional. Of his life we know but little, but the bare facts, supplemented by highly probable conjectures, suffice to explain his attitude towards Athenian politics and the statesmen of his day. He was a true patriot, and a striking contrast is drawn between his conduct and that of Dante in exile. The Funeral Oration, which expresses the patriotism of Thucydides even more than that of Pericles, is admirably expounded, and it is pointed out that the obscure exile was tainted by the same "infirmity of noble mind" as the Olympian who "fulminated over Greece"—intellectual arrogance. It might well have been pointed out also that the fall of Athens, though wrought by demagogues like Cleon and Hyperbolus, may be traced back to the *Weltpolitik* of aristocrats like Pericles.

Greek Country Life paints for us the native Arcadia from which the *Arcadia* of Sidney is derived. We have, at full length, the farmer of Hesiod and the squatter as depicted by a Greek rhetorician of the first century A.D. The pastoral tale of Dion of Prusa will be new to most of our readers, as it was to us, and it was well worth translating; but we should like to know on what evidence it is pronounced "half true"—as true as Goldsmith's *Deserted Village*.

Mother and Daughter is an attempt to present in dramatic form the Demeter myth. A father and his daughter, sole dwellers in a lonely hut, are discovered reckoning up their scanty pittance of food, for the famine has been sore in the land. To them enters an aged woman, veiled and draped in black, who craves hospitality. She is seated and offered food, but declines. Asked who she is, she answers in riddles, but tells the girl that she seeks a lost daughter, far more lovely than the girl. The girl tells her of a late apparition—a car driven by thundering steeds that vanished in the cloven rock and left behind a trail of flames, and the cry of a terror-stricken maid. The old woman seizes two brands and hurries out on the track of her daughter. Drops fall from a clear sky; there is a sound of abundance of rain. The man and girl go forth to assure themselves that this is no illusion. The Mother and the Maid meet in the cottage and tell each other the mysteries of summer and winter, alternate life and death.

Such, in bare outline, is the plot which serves, with the aid of stage directions *à la Shaw*, as a framework on which the myth, as a vital part of Greek religion, is woven. Becker's *Charicles*, a similar attempt to revivify Greek life, was a bare skeleton; here it is clothed with flesh.

We must pass over the *Alcestis* with one remark. To trace the *κῶμος* on which the play is founded does indeed justify much that before seemed crude or even vulgar, yet it is none the less true that in the admixture of tragedy and comedy Euripides was the precursor of Shakespeare, and that Browning was able to appreciate the characters of *Alcestis* and *Herakles* without this key.

"Greek simplicity" has become a mere *cliqué*, and Mr. Thomson's "Note," if it does not succeed in defining it, at least shows us what it does not mean. It is not the innocent prattle of a child, nor is it the simple-mindedness (*εὐθθεια*) of a primitive people that has few ideas to express and so finds no difficulty in expressing them. Homer and Herodotus are taken as palmary instances of Greek simplicity, and the passages selected for comment bring home to us convincingly the consummate art that underlies the apparent artlessness of Homer, and the delicate humour, the quiet irony, the *malice* of Herodotus. But what of Pindar, of Aeschylus, and the tragic chorus in general? The answer is twofold. It is not maintained that all Greek literature, even of the golden age, is simple, and where it lacks simplicity the explanation may be found in its origin. The earliest poetry is a form of charm or spell, or an accompaniment of the

tribal dance, and the poet was at first the leader and then the explainer of the religious or mystic ritual, but the peculiarity of Greek poetry is that the form survived long after it had been severed from its original function. It retained also something of the mysticism, "the sense of something far more deeply interfused."

The explanation does not wholly satisfy us. Why is all Greek literature later than Euripides excluded from the purview? Do not the Sophist Rhetoricians and the Alexandrians who inspired so much of Roman poetry represent one side of the Greek genius? Is it true that of that simplicity which expresses in a "solitary word" the mystery of life itself, "the Greeks are nearly all masters"? Could not each instance of these mystic runes here given be matched by a score from modern poetry? One graver question to conclude. Has not Christianity given a profundity and significance to modern poetry deeper and intenser than aught we find in Greek? There is no hint of this in Mr. Thomson's Essays, nor does it concern him to show us the obverse of the shield, yet a careless reader might infer that in Art and Poetry Greece had said the last word, that "Beauty is the most real thing in the world; also the wisest, the most sane and healing," that Goethe's "Im guten, schönen, ganzen resolut zu leben," is nothing but an amplification or paraphrase of the Greek idea.

A Life of William Shakespeare. By Sir SIDNEY LEE. New Edition, rewritten and enlarged. (18s. 6d. Smith, Elder.)

The first edition of Sir Sidney Lee's *Life* was published in 1898, and in the seventeen years that have elapsed it has gone through six editions, besides the "Illustrated Library" edition, and received successive accretions and corrections. The time was ripe for recasting it in what constitutes virtually a new work. In the original preface Mr. Lee stated, as one qualification for the task he was undertaking, that for more than eighteen years he had made Elizabethan literature, history, and bibliography his main study, and since then, though the *Dictionary of National Biography* was his principal occupation, yet his study of Shakespeare has not relaxed. He has been recognized as the doyen of Shakespeareans, the best informed of living authorities, and the most sober and judicial of critics.

The book has doubled in size, and, though the chronological order is followed, it might more fitly be described as a cyclopædia than a life of Shakespeare. Thanks to a full table of contents and an admirable index, which occupies more than fifty pages, compiled by Mr. W. B. Owen and Miss Elizabeth Lee, the reader has little difficulty in finding the reference he wants, and there are few topics (*experto crede*) for which he will consult the index in vain. "Shakespeare" in the British Museum Catalogue had, in 1897, when it was issued as a separate publication, 3,680 titles, and the yearly additions must be reckoned by hundreds. This one fact may give some notion of the extent of printed matter with which a Shakespeare expert should have at least a bowing acquaintance. The bulk of this literature has, of course, been already explored, and pronounced worthless by competent judges, but *supercheries littéraires* that have left their mark cannot be ignored, and it is useful to have a permanent record of the Ireland and Collyer forgeries. The Bacon controversy, which has loomed so large during the last half-century, is here seen in its true perspective, and the bibliography relegated to a footnote.

The field has been so carefully and laboriously explored by generations of scholars and antiquaries that the discovery of any new nugget is most improbable, and the Shakespearean soil has been sifted and analysed as though it were pitchblende for any possible grain of radium it may contain. Among the new materials thus treated in the present volume we may mention in particular the Records of the Stratford Corporation; the relations of the Combe family, Shakespeare's wealthiest fellow-townsmen, to Shakespeare, as recorded in their wills and legal documents; new lights on Shakespeare's social status and his connexion with the Court; his patrons and contemporary playwrights; his fellow-actors and co-proprietors of

theatres; and, perhaps most important of all, a more searching scrutiny of the quartos and folios, the conditions under which these were published, and the bearing of these facts on our *textus receptus* and as a factor for determining the dates of the several plays.

Writers on Shakespeare may be roughly classified under two schools, the exoteric and the esoteric. The first deny that Shakespeare is his own interpreter—that the man, his mind and art, can be discovered in his plays and poems. It is on the rarest occasions that he lifts the mask, and then only for a moment. To this school Sir Sidney Lee has sworn allegiance; and with the other school, the æsthetic critics, as he calls them, he concerns himself but little. He points out, in passing, the absurdities and contradictions into which they have fallen, but "to increase the number of æsthetic studies [so he wrote in 1898] is a work of supererogation." The sonnets were chosen as a test case, and a vast amount of learning was expended on showing that much of the language and sentiment was artificial, and borrowed or adapted from Italian and French sonnets; while the attempted identifications of the youthful friend and the dark lady were all wild guesses, and most of them demonstrably absurd. It is worth recalling how Prof. Raleigh, a typical representative of the esoterics, met this challenge in his *Shakespeare* (1909). He has grave doubts whether Mr. Lee solved the riddle of the mysterious "Mr. W. H.," but he would welcome any such solution, as "it makes waste paper of all the literature that has gathered round the initials, and leaves us free to consider the sonnets apart from the dedication," and he proceeds to expound the famous text of Wordsworth,

With this key
Shakespeare unlocked his heart.

We stand aside as neutrals, and our only object in recalling one interlude in this standing battle between the two schools is to point out what the reader cannot fail to find, and also what he may miss in this standard life. There is room for both schools, but the one must decrease as the other increases. For another generation a second life of Shakespeare, with the same scope and on the same scale, would indeed be a work of supererogation, though all his readers will pray that Sir Sidney Lee may long be spared to gather up and incorporate the fragments that remain. But of studies like those of Mr. A. C. Bradley, here justly named as first of living critics in succession to Coleridge, there can be no end. The fittest of all the epithets applied to Shakespeare is Coleridge's "myriad-minded." To the seers of each age, from Ben Jonson and Milton to Goethe and Victor Hugo, to Tennyson and Swinburne, his star shines with a peculiar light as each marks the rays that most attract him. These interpretations, even the most inspired, are but partial lights, yet to the student of Shakespeare they are revelations in part, not *ignes fatui*, as the extreme exoterists account them.

Schools of To-Morrow. By JOHN and EVELYN DEWEY. (5s. net. Dent.)

Prof. Dewey is in the forefront of educationists to-day, and a new book from his pen brings with it the assurance of fresh and stimulating ideas. *Schools of To-Morrow* gives an account of some of the most recent educational experiments in America, interspersed with chapters on the new theories they exemplify. The general trend of opinion expressed in the book will be best conveyed by a few quotations.

Until recently school education has met the needs of only one class of people, those who are interested in knowledge for its own sake—teachers, scholars, and research workers. The idea that training is necessary for the man who works with his hands is still so new that the schools are only just beginning to admit that control of the material things of life is knowledge at all. Until very recently schools have neglected the class of people who are numerically the largest, and upon whom the world depends for its supply of necessities. One reason for this is the fact that democracy is a comparatively new thing in itself; and until its advent the right of the majority, the very people who work with their hands, to supply any of their larger spiritual needs was never admitted. Their function, almost their reason for existence, was to take care of the

material wants of the ruling classes. . . . The democracy which proclaims equality of opportunity as its ideal requires an education in which learning and social application, ideas and practice, work and recognition of the meaning of what is done, are united from the beginning and for all.

Prof. Dewey sees on the one hand what he calls "the text-book method of education"; on the other, narrow industrial training. The first sounds more formal and disciplinary than it has been for some time in England. He desires neither for Americans, but rather what may be called general education, with a strong industrial bias from the outset. At the end of school days, which may be extended to sixteen or eighteen years of age, the pupil goes forth either an intelligent worker, with sufficient insight into industries of all kinds to make a wise choice of his future life work, and possessed of sufficient all-round development to be able with ability to rise to the top of his trade, or he passes on to high school and University, with their more purely intellectual life, understanding the problems of industrial life, and in sympathy with the worker.

The actual accounts of the schools contain no criticism, though Prof. Dewey illustrates his remarks by reference to the schools described. This makes it difficult to estimate to what degree these schools realize his ideals.

As far as we are concerned in England we shall not, in all probability, be willing to give such a marked industrial turn to education in our elementary schools. From what can be gathered of the curricula in the new schools, each subject, as far as possible, is made to subserve the practical industrial and economic point of view. History, geography, Nature study, science, language, number, drawing, painting, often reading—all are used for this end. The subject-matter is loosely organized, the pupils often giving the lead in the topic chosen for investigation. Literature is studied, but one gets the impression that the study is very desultory. Music seems to have little attention.

While such schemes may turn out intelligent wage-earners and citizens prepared to take their part in civic life, we cannot but feel that certain aspects of individual development have been woefully neglected.

We know a foreman in munition works who still, in the stress of War work, reads Greek in his scanty meal time, and a window-cleaner with a passion for music. Postmen have their picture exhibitions, factory girls grow famous for their country dances, beggars (*teste* R. L. Stevenson) read Shakespeare and Shelley. What does this new education do for such as these; where do they get their opportunity?

The very fact that the Workers' Educational Association grows and flourishes in England seems to show that the intelligent English workman, besides understanding of his work, wants some interest that takes him right outside his daily routine; it may be the study of literature or philosophy, or any of the spheres of human interest.

Yet, though we cannot go with the extreme advocates of the futurist democratic education, we have much to learn from these pioneers, and from Prof. Dewey for pointing out real defects in existing systems.

Our mode of dealing with school subjects is still too far removed from life and real interests; our curriculum is too rigid. Children have too little liberty—too little opportunity for self-expression. There is too much drifting into occupations, too little general understanding of industrial work, to allow of intelligent choice, though some attempt to meet this defect is made in our industrial reformatory schools. Lack of sympathy between various classes of society is disastrously shown in our recent labour strikes. These things deserve our serious consideration. Nor must we close without some recognition of the obviously fine work that is being done in America for the uplifting of industrial communities, both through the education given in the schools and also through the close connexion that is formed between the school and the community, so that reforms for housing, sanitation, &c., have been worked through school influence, and have bettered the whole neighbourhood. Such schools as have been described are courageous ventures, breaking free from convention and tradition, feeling

their way along what they consider to be truer lines. Prof. Dewey sets before us a true democratic ideal that we may hope to see partly realized in England. Yet it would not satisfy us if it implied the neglect of the æsthetic and humanistic elements.

Rugby Homilies. By ARTHUR SIDGWICK.
(Sidgwick & Jackson.)

"Homilies" as a title has fallen out of fashion, and the latest meaning of the word in the *Oxford Dictionary* is "a tedious moralizing discourse," but, when we turn back to the first definition, "a practical discourse with a view to the spiritual edification of the hearers rather than for the development of a doctrine or theme," we see that the editors could not have chosen a title that better describes these Sunday addresses of Mr. Arthur Sidgwick. In a brief introduction, Canon J. M. Wilson explains their origin. They were given at Rugby in the seventies, on alternate Sunday evenings, to members of Wilson's house, to which Mr. Sidgwick had been appointed as house tutor. Having read them, we can endorse Canon Wilson's description, on which we cannot improve, though we may complement it by some comments and particulars. They dealt with apparently commonplace subjects, but they lifted every subject out of the commonplace. They arrested and kept the attention; they revealed boys to themselves; intellectually, morally, spiritually, they were highly educative and highly valued.

To readers who have never heard or even seen Mr. Sidgwick, they may seem assuredly not dull or commonplace, but lacking in colour and on too high a level of style and argument for a congregation of schoolboys. There is not a flower of rhetoric, not an anecdote, not a quotation from the poets or great divines, scarce a single "topical" allusion. What made these lay addresses so effective—and Canon Wilson tells us that in his long experience he has never known any school sermons so revealing and illuminating—was the personality of the speaker. All who listened to him knew that he was not like Tennyson's parson, saying what he ought to say, but speaking out of the fullness of his heart, as might an elder brother, as one who had been tempted like themselves and had learnt wisdom no less by failures than by victories. No texts are prefixed to the addresses, and the very words of Scripture are rarely employed, but the verse, "Be ye therefore perfect even as your Father which is in Heaven is perfect," might serve as a motto for the volume. The Canon's warning to reviewers not to look for dogmatic or Church of England teaching, for which the school chapel is the proper place, is surely superfluous. The morality here enforced is not "tinged by emotion," but inspired and vivified by the Christian Faith. The sole heterodoxy that we have detected is the non-Scriptural use of high-mindedness. Not only by the plain, unadorned style and faultless English, but also by the logical development of thought, which makes each homily a coherent whole, we are reminded of John Henry Newman's *Village Sermons*, and higher praise could not be awarded.

There is a striking portrait of the author, presumably from a photograph taken in his Rugby days, and a facsimile of the script. The handwriting is minute, but perfectly legible, each letter clear and distinct as Porson's Greek hand.

The Gospel according to St. Matthew. By A. H. M'NEILE,
D.D. (15s. Macmillan.)

This is a large and scholarly commentary, forming a companion volume to Dr. Swete's edition of *St. Mark* published by the same firm. Wescott and Hort's Greek text is used throughout. The birthplace of the long and detailed commentary is Germany, but the fashion of such writing quickly took root in England under the influence of Westcott and Lightfoot. Something of a reaction in this matter has begun to show itself here at home, and the present volume shares in the newer tendency. The author tells us that he does not attempt to deal in detail with intricacies of the Synoptic problem, "nor are textual matters handled with any fullness. Textual criticism is like an ordnance survey—most readers

need a map in which the broad features are not obscured by multiplication of detail." The volume therefore is mainly concerned with the historical problems raised by the Gospel, and with the exegesis of the text so far as that is necessary for the object in view. A short introduction is given, which, however, is crammed full of matter, and we then pass direct to the text and the notes. The main value of the commentary, therefore, lies in the notes, which are clear and to the purpose. Dr. M'Neile's reputation as a Biblical commentator is sufficient guarantee that his annotation will be scholarly and will not gloss over difficulties. He dates the composition of the Gospel somewhere between 86-100 A.D., and suggests that among the sources used by the author (who was not St. Matthew the apostle) was "a Greek writing, translated from an Aramaic original, containing passages from the Old Testament (*testimonia*), probably with brief explanations of their fulfilment in Christ's life, drawn from a Hebrew text not identical with the Masoretic. There is no clear evidence that St. Matthew ever translated independently from the Hebrew. Apart from *testimonia*, he normally employed the Septuagint."

Dr. M'Neile's attitude towards the Virgin Birth and the problem of the miraculous generally may be described as critically conservative. He faces the difficulties with fairness and frankness. Here, for example, is a portion of his note on the Transfiguration:

Some dismiss it as a legend, . . . but others admit the possibility of a real mystic vision or psychic experience. . . . The modern study of so-called "sub-conscious" and mystic states supplies analogous instances. The disciples, and perhaps especially the chief disciple, must have pondered much on the relation of the Lord's person and teaching to the Jewish religion. . . . And it is entirely in accordance with probability that they had "sub-consciously" grasped the truths He had taught them with far greater vividness than their normal consciousness realized. Intense light and heavenly voices are the symbols by which mystics have most frequently attempted to describe their deepest intuitions.

An English Course for Army Candidates. By S. P. B.

MAIS. (1s. 6d. net. Sidgwick & Jackson.)

Mr. Mais has here attempted what appears to us an impossible combination, a scheme of English teaching that shall inspire the learner with a lifelong love of letters and at the same time secure his winning high marks in the Woolwich and Sandhurst Examinations. He would run with the hare and hunt with the hounds. He takes as his text at starting a famous passage from *Sesame and Lilies* and expounds it as an eloquent sermon on reading. By way of application, there follows a commentary on the lines of *Lycidas*, beginning "Last came and last did go." This, too, is excellent in its way, but we doubt whether it would satisfy the examiner, who is sure to ask why the bad bishops are represented as piping and what is the meaning of "scrannel pipes of straw." After this proem, the hints on handwriting, spelling, and punctuation come as a bathos. The importance attached by the Civil Service examiners to these beggarly elements has always seemed to us pedantic, but Mr. Mais bows in the House of Rimmon, trounces "their's" and "it's" as gross solecisms and the substitution of "where" for "were" and "hear" for "here" as intolerable. What does it matter how the letters are formed if the handwriting is legible, and the solecisms may be mere slips of the pen?

But the bulk of the manual is concerned with English Composition, and this part is well worthy the attention both of master and pupil. "There is one golden way, only one essential rule in all writing, and that is: Read yourself full, write yourself empty." Mr. Mais is too fond of epigram, and the pupil is likely to translate "Ecrivez tout ce qui vient au bout de la pleine." This misunderstanding may be, and is to some extent here, corrected by the teacher; but a more serious objection to his scheme is that the course of reading prescribed is so extensive that the pupil who followed it to the letter would have little time left for other studies. The candidate must own (not borrow) some fifty or more novels, not including Kipling's Complete Works, Seton Merriman's Complete Works, Ian Hay's novels, Jack London's novels, &c.

So with repetition, both of prose and verse, a subject generally neglected in secondary schools. The passages here selected show both taste and judgment, but we should be slow in pronouncing *Sohrab and Rustum* and *The Ancient Mariner* the two finest narrative poems in the language; and the prospective candidate reads that both poems "should be known by every boy before he goes anywhere near Sandhurst or Woolwich." He will be inclined, like the rich young man, to go away sorrowful.

The crammer will sniff at the book as a piece of highfalutin', but the true teacher of English will welcome it as setting before him a high ideal.

Modern Essays. With an Introduction by J. W. MACKAIL. (5s. net. E. Arnold.)

These reprints of "third leaders" in the *Times* needed no apology, and Mr. Mackail apologizes for indicting one. However, we are grateful to him for contributing another *Modern Essay* which, but for its signature and its length, might have appeared as the eighty-third or the first.

"Journalism extending itself towards, and ever becoming, literature" is Mr. Mackail's happy description of these *Modern Essays*, long known to the profession as "middles." The *Times*, always conservative in matters of form, was slow in admitting them to its leading columns, and now it prescribes to its contributors a fixed length and a certain uniformity of treatment, and even of style. The model is good, and it is refreshing, in these days of flamboyant or slapdash journalism, to have so many specimens of pure and simple English, free from all neologisms or anything approaching slang. They remind Mr. Mackail of Bacon's *Essays or Counsels Civil and Moral*. To us they rather suggest Addison's *Spectator*. There is the same ease, the same tolerance and equanimity. But to this age Addison's moral philosophy seems shallow and commonplace. We read him for the manner, not the matter. The questions here raised are far more subtle, and the solutions offered are confessedly partial and give us furiously to think. Here is a *cliché* that assuredly would not have escaped the editor's blue pencil. How hard it is in writing English prose, no less than verse, only not to stumble! We commend the volume, not only as a tonic and stimulant for tired brains, but as a manual for youthful essayists.

The Balkans: a History of Bulgaria, Serbia, Greece, Rumania, Turkey. By NEVILL FORBES, ARNOLD J. TOYNBEE, D. MITRANY, D. G. HOGARTH. (5s. net. Clarendon Press.)

Mr. Hogarth, who contributes a preface, dated November 1915, informs us that these historical essays were written independently at different dates, and that there has been no opportunity either for collaboration or for revision. Mr. Hogarth's own essay, on Turkey, the latest to be finished, was compiled in the interval between two missions abroad. Wisely, we think, there has been no attempt to edit or bring the earlier essays up to date, and when quite recent events have falsified the anticipations of the writers they have been allowed to stand. Thus, when Mr. Toynbee wrote of Greece, M. Venizelos was still in power, and Bulgaria had not cast in her lot with the Central Allies. Only one common spirit animates all four writers: the broadmindedness and impartiality of the true historian. "Tout savoir c'est tout pardonner" might stand for the motto. In each of the Balkan States, no less than in Greece itself, there is much to admire, and some excuse to be found for the blackest pages of its history. Compared with Western Europe, they are in a backward stage of civilization, and some have scarcely emerged from barbarism, and for the present imbroglio the blame must lie mainly with their western neighbours. There is no abuse, not even of crowned heads—no "atrocities," no scandal, even about Queen Elizabeth, and the reader whose model historians are Macaulay or Froude or Carlyle will find it tame and colourless; but it is a worthy representative of the Oxford school of modern history, a book which the serious student of modern politics is

bound to possess. It is a pity that the maps are on so small a scale, and that there are not more of them.

Montessori Examined. By W. H. KILPATRICK, Ph.D.
(1s. net. Constable.)

Mme Montessori has been alternately proclaimed by her followers as a new evangelist and denounced by Froebelians as a false prophet, but appreciations by competent and dispassionate judges have been rare. Such a one is Prof. Kilpatrick, who has not only studied her works, but inspected her work at Rome with an open mind. He holds no brief for the Froebelians, and considers that the kindergartner has still much to learn, and may learn something from the Directrice. His conclusion is that, though Mme Montessori has in no way herself advanced the science of education, yet she has done good service in insisting that no education can be sound that is not based on scientific principles, and in demonstrating how Rousseau's doctrine of liberty or self-expression may be applied to the infant school. On the other hand, it is shown that the Montessorian psychology is "early Victorian"; that she still accepts, without reservation, the "transfer of faculties." Each sense is to be trained separately as an intellectual gymnastic. Her didactic apparatus is formal, mechanical; and, though the child may choose between the different sets, he is forbidden to play with any. She is quoted as saying, "Were I persuaded that children needed to play, I would provide the proper apparatus; but I am not so persuaded." What need we any further witness? The little handbook is a masterpiece of clear exposition.

Fundamentals in Methods in Elementary Schools. By JOSEPH KENNEDY. (5s. 6d. net. Macmillan.)

"The aim in the writing of every chapter," says the author, "has been to give aid in a concrete and definite way to teachers of the common school subjects, and to arouse impulses and resolutions for better things in the minds of elementary teachers, supervisors, and superintendents everywhere." There is no doubt that the first part of this aim has been most successfully accomplished, but as to the fulfilment of the second there is some doubt. This book, by the Dean of Education in the University of North Dakota, will be found useful by our own training college students; it is informed by a broad and breezy spirit which is invigorating and attractive. There is not a dull page from cover to cover, and, if it must be confessed there are many platitudes, they are mostly good reliable ones which it will do no harm for young teachers to ponder over and re-examine. The author has evidently had a wide experience in the teaching world which enables him to discuss usefully many of the school subjects with which the elementary teacher will be called upon to deal. Especially sensible are the chapters on "Word Work" and "Language Work." American writers on education are, generally speaking, neither profound psychologists nor original thinkers, but they possess a fund of common sense and a robust outlook on life of considerable value in the practical side of teaching.

The Industrial Training of the Girl. By W. A. MCKEEVER, Professor of Child Welfare in the University of Kansas. (2s. net. Macmillan.)

The title of this useful and suggestive volume, thoroughly misleading as it is, may possibly deter many who would be greatly interested in its subject-matter—the training of the girl from the kindergarten stage to her college career—from studying its pages. This is a pity, for Prof. McKeever has a wealth of practical knowledge of girl-nature and girl-life, and in reading his book we feel as we feel in talking to the intelligent, sympathetic mother of a large family of happy, healthy boys and girls, that an ounce of practice is worth a ton of theory, and that first-hand acquaintance with, and a love of, real living children is more valuable than a scientific and academic knowledge of child psychology. Especially is this so in the case of training college students and young mothers and teachers, to whom this book is to be particularly commended. Not, of course, that psychology is to be despised; but as during the last few years the scientific rather than the experimental method has been applied to child-study, that science is not likely to be neglected. Many a student passes out of the modern training college proud of her knowledge of the Montessori system, of the meaning of "perception" and "apperception," and so forth, yet unconscious of her ignorance of the actual child whom she will so soon be teaching. Prof. McKeever, in coming to his task as "guide, philosopher, and friend" to girls, is singularly free from all prejudices on the "woman question." "To play and work and love and serve and worship—these are the component parts of all good womanly lives. Deny a woman any one of these holy practices, and she becomes incomplete, servile, and unhappy." He holds that from earliest childhood the girl must be given *duties* to perform, even though this entail extra work and thought for the mother or nurse in charge of her; and in Chapter I, entitled "The Small Beginnings," the

author shows how the seeds of future wellbeing may be sown in babyhood. One of the most interesting sections of the book is devoted to Home and School Co-operation, in which something of the spirit of Ruskin seems to speak with the voice of democratic America. After discussing the Parent-Teacher Associations, so striking a feature of modern American life, Prof. McKeever sums up the value of the "common school," and the ideals which should govern parents who send their children thither. "The best justification of the common school is this: it makes for a united community; it inculcates sympathy, goodwill, co-operation, personal self-reliance, and loyalty to the best interests of the whole of humanity. If we can but draw the central thought of the common parent away from the idea that his child is to be trained to enter into combat with the world . . . to secure the good things of life through shrewd and cunning activities intended to wrest such things from somebody else . . . if we can induce him to think of the child as in process of learning day by day, in school and out, how to enter co-operatively into the great life of the community and the nation—then we shall have gained a strong point of vantage in behalf of human welfare." A fine and lofty view of education which, in the light of present-day events, requires more than ever to be emphasized.

'Home University Library.'—*Political Thought in England from Spencer to To-day.* By ERNEST BARKER. (1s. net. Williams & Norgate.)

Mr. Barker maintains the high standard of this series, by his presentation of the political thought of England during the last sixty or seventy years. He has not only studied all the important works on social philosophy that have appeared, but has also considered the side-lights thrown by biology, political economy, law, and psychology. The period studied is divided roughly into the years before and after 1880; up to that date the general tendency was towards individualism and the policy of *laissez faire*; after that date the doctrine of the non-intervention of the State passes away. As the author puts it: "The difference between the general tone and temper of 1864 and the tone and temper of 1914 . . . is profound. While in 1864 orthodoxy meant distrust of the State, and heresy took the form of a belief in paternal government, in 1914 orthodoxy means belief in the State, and heresy takes the form of mild excursions into anarchism." The author has the rare gift of expounding the theories he discusses and of keeping himself in the background; for this reason his book is an excellent introduction to present-day politics, the complexity of which is beginning to be more generally realized. That product of Oxford, the idealistic theory of the State, set forth in the writings of Green, Bradley, and Bosanquet, and the criticisms it provoked, are fully dealt with. Of these criticisms the one that emphasizes the fact that human nature has other spheres than conscious will and reasoning mind, such as emotions, instincts, imitation, habits, &c., is well indicated. Herbert Spencer is estimated thus: "If he had worked systematically at the thought of his predecessors, and studied systematically the real facts, he would have achieved less, and perhaps helped the world more. As it is, we must consider him a brilliant generalizer from imperfect data which he had never really thought together into a unity." Of John Stuart Mill he writes: "A transitional thinker, full of the inconsistencies natural to a period of transition, but supremely candid and generous in all his inconsistency. Mill prepared above all others for the way of the new development of English thought." He appears to us to misinterpret "Internationalism," which is not a negation of "nationalism," but friendship and co-operation of nationalities which retain their distinctive features. With this exception, however, Mr. Barker's exposition is sound, and the chapter he devotes to the political theory of literature is one of much interest. Carlyle and Ruskin are discussed in detail; Matthew Arnold and William Morris examined; and the great influence of literature on the political thought of the later nineteenth century well treated. One of the best parts of the book is the description of various phases of Socialism, where the author exhibits much insight in his distinctions and his appreciations of the various leaders. The book is quite up to date, and Mr. Barker realizes that fresh sources of thought, such as social psychology and the new economics, are diverting the current of political theory, and he hopes that in time theory will be squared more closely to fact; though then it would cease, for "it grows on the uncertainty of human affairs; it grows on the inadequacy of its own successive attempts to explain them." A bibliography, consisting of a list of books that have influenced or illustrated the progress of political thought, is added.

A History of Europe from the German Invasions to the Great Renaissance. By W. O. LESTER SMITH. (5s. Dent.)

The present War has given an impetus to the study of European history, hitherto somewhat neglected in the school curriculum. It is often difficult to reconcile the conflicting claims of the many

subjects with which the modern child is confronted; but, with all due deference to the advocates of science and classics, it must be asserted that, whatever else is relegated to a subordinate position in the time-table, European history should be in the forefront. Hence Mr. Lester Smith's volume is a welcome addition to the small number of reliable books at a cheap price that deal with this subject. The author does not claim that the book is in any way original. What he hopes to do is to arouse the young reader's interest and to help him to see history as something else than a mere tiresome subject to be "got up" for examination. The book is well arranged, pleasantly written, and contains many interesting quotations from contemporary sources which are likely to send eager students to the original writers themselves. The bibliography at the end of each chapter is much to be commended. On the other hand, exception must be taken to the maps, which are by no means equal to the text. They are over-crowded and the boundaries are ill defined. Dates now and again in the margin would be an advantage. The book is suitable for the middle forms of secondary schools, and possibly for the elementary training colleges, and should meet a large and growing demand.

"Home University Library."—*Belgium*. By R. L. K. ENSOR. (1s. Williams & Norgate.)

As an ancient nation with a long record of doing and suffering, Mr. Ensor has described Belgium in its chief aspects. He starts with the geographical characteristics and their effect on the nation. It forms the natural meeting-ground of Western Europe for trade purposes, and for the same reasons has been many times their battleground. King Albert reminded his people of their great patriotic memories in his proclamation on the German invasion, and the author here gives glimpses of the historic glories of Belgium, its years of subjection, and its independence since 1839. There is a clear exposition of the Belgian constitution and of the great struggles over the education question and the franchise. A solution to the former had been reached in 1914, but time has not been able to show its efficacy. There is a good chapter on the Art and Literature of the country, wherein it is shown that painting is the people's characteristic art. Some of the greatest names appear as depicting Labour and its tragedy and strength; in sculpture Constantin Meunier is the master; and in painting Charles de Groux and Léon Frédéric. Within the limits of a small volume Mr. Ensor has produced a creditable and in some parts attractive book, but the impression is left that the information is not first-hand and that the promise of introductory chapter has not been maintained throughout. But those who knew little of Belgium before the European War will find much to interest them.

"The People's Books."—*Germany*. By W. T. WAUGH. (6d. Jack.)

As much information as could be compressed into ninety pages is given in this little book, and Mr. Waugh has fulfilled his aim of giving the knowledge about various aspects of Germany that the public wants at present. He has been guided in his choice of topics by questions asked after lectures given to the Workers' Educational Association. A sketch of the history of Germany shows that the present Emperor is claiming the powers vested in the head of the Holy Roman Empire, who "was God's vicegerent on earth, divinely appointed to rule over men's bodies and control their temporal concerns." The leading features of the Hohenzollern policy can be traced in the career of the Great Elector, Frederick William, and Mr. Waugh leaves the reader to smile as he compares then and now. A good account of the Franco-German War is followed by chapters on the government of Germany, which is far less democratic than appears on the surface, and the Kaiser's powers, though on paper less than the King of England's, in reality are far greater. The different parties in the Reichstag are described and compared with correspondingly named ones in the English Parliament, but the likeness extends little beyond the name. Home and foreign policy are made clear, and a chapter is devoted to the omnipresent German culture. Here we differ from Mr. Waugh in his estimate of Nietzsche, whose opinions are much misunderstood in England. But the author is fair to German achievements, and praises what has been done before 1870, since when Germany has become more and more materialistic. A useful bibliography is included, and this little volume is a good introduction to the study of the books mentioned.

African Camp Fires. By STEWART EDWARD WHITE. (5s. Nelson.)

With his usual fascinating manner of recounting ordinary incidents, and his offhand method of telling extraordinary adventures, Mr. White has given an account of his hunting expedition in the district westward of Mombasa. His descriptions of Port Said and the Suez Canal are masterpieces of colour, his sympathetic tolerance of all types gives him a fair attitude, and his character sketches of natives expose the absurdities present with a kindly

humour. But he sees more than absurdities, and pays a high tribute to one of his servants: "One makes many acquaintances as one knocks about the world, and once, in a great many moons, one finds a friend—a man the mere fact of whose existence one is glad to realize, whether one ever sees him again or not. . . . Among them I am glad to number this fierce savage. He was efficient, self-respecting, brave, stanch, and loyal with a great loyalty. I do not think I can better end this book than by this feeble tribute to a man whose opportunities were not many, but whose soul was great." The personal touches and poetic paragraphs interspersed cause the reader to have almost an affection for a writer who can see the beauty around him, and can record his own exploits with so little self-consciousness. From the teacher's point of view the book is a quarry for extracts that give the spirit of the country, both with regard to the landscape and the natives. The chapter on the Masai people could, with profit and pleasure, be read aloud to young people. In fact, works of this kind should be inseparable from the teaching of geography.

The Shining East. By EMILY M. BURKE. (1s. Ralph, Holland.)

This story of ancient civilization in the central East, of Egypt, Assyria, Persia, and Phoenicia, is here told in a form that the author has found intelligible and interesting to children of eleven and twelve. She has wisely made no attempt to give a continuous narrative, and selected the most striking features which arrest the attention and impress themselves on the memory. Thus for Egypt we have the Rosetta Stone and the Egyptian deities, for Babylon the Khammurabi Code, and the stories are helped by well chosen illustrations.

The Fringe of the Fleet. By RUDYARD KIPLING. (6d. Macmillan.)

Of life in the trenches and in the fighting line, thanks to Ian Hay and other privileged onlookers and correspondents, the public has a very fair notion; but of the trawler, or auxiliary, fleet, its composition, its manning, and its daily task, little is known even to the Grand Fleet, and still less to landsmen. Mr. Kipling has lifted the veil, and in a series of instantaneous photographs shown us the very form and fashion of the new sea rovers, those "mariners

That ever with a welcome frolic took
The sunshine and the tempest."

Shells, bombs, mines, torpedoes—"it's all part of the day's work, and nothing to be proud of." "Charge them with heroism—but that needs heroism indeed! Accuse them of patriotism—they become ribald." One more reason for showing them that we whom they serve understand and are grateful. We should like a copy of *The Fringe of the Fleet* sent as a New Year's present to every man in the Navy. It would be appreciated even more than a packet of Woodbines.

General Science. By O. W. CALDWELL and W. L. EIKENBERRY. (3s. 6d. net. Ginn.)

Scientific instruction in schools is generally limited to systematic courses in two or three subjects, of which physics and chemistry are generally the chief. The authors of this excellent little volume have attempted in their teaching work to break away from the usual routine of differential science, presenting in its place a broad survey of all the commoner phenomena of nature. This method of science teaching they declare, after six years' experience, to be far more effective and profitable than the older system, both in developing a scientific attitude and in discovering individual interest and ability. The ambitious nature of the course is well shown by the five major divisions of the book:—(1) The Air; (2) Water and its Uses; (3) Work and Energy; (4) The Earth's Crust; (5) Life upon the Earth. Under the first of these divisions such subjects as the physics and chemistry of gases and combustion; temperature changes and the seasons; humidity, climate, and weather; the growth of plants; and the development and transmission of bacteria and diseases are discussed. The other sections are equally comprehensive. Given so wide a field, it would be remarkable if a student failed to find a source of interest; but it must not be forgotten that there is a limit to the number of fresh ideas which can be comfortably assimilated in the course of a year. The work covered by this book appears to us to be far too diffuse for successful adoption in an ordinary school curriculum. It would, however, be exceedingly useful to a teacher, providing interesting applications in more systematic courses of elementary science and physical geography, and stimulating him to emphasize the human note in subjects which too often are unnecessarily severe and theoretical in the treatment. The book is well written and clearly printed, with a large number of good diagrams and attractive illustrations. For the general reader, with little preliminary knowledge, it supplies an excellent introduction to the science of everyday life.

The Stars and their Mysteries. By C. R. GIBSON. (3s. 6d. Seeley.)

This astronomy for children is dedicated to "Ruth, George,

Connie, and to all boys and girls between the ages of nine and fourteen." We quote the dedication because it points to what constitutes the special merit of the book. Of Mr. Gibson's attainments as a man of science, and his pre-eminence as an expositor, there is no need again to speak, but he here proves that he knows the mind of the child, and can, without either pedantry or condescension, excite and gratify its curiosity. These lessons ("talks," we should rather call them) have evidently been rehearsed to Ruth, George, and Connie; and these are genuine talks—not the faked conversations of Mrs. Marcet and Mrs. Markham.

Modern Chemistry and its Wonders. By GEOFFREY MARTIN, D.Sc., Ph.D. (7s. 6d. net. Sampson Low.)—This forms at the same time a companion volume and a supplement to Dr. Martin's *Triumphs and Wonders of Modern Chemistry*. No science has made such rapid strides, both in theory and practical applications, as chemistry, and Dr. Martin, as himself a worker and researcher, and also as a popular expositor, has already given proofs of his competence. Technicalities are as far as possible avoided, and only the ability to interpret a chemical formula and such rudimentary knowledge are taken for granted. Explosives is a subject that has performed in the last year come home to men's businesses and bosoms, yet how few educated gentlemen can even now tell what is the active force of a shell or a torpedo: what is the essential difference between dynamite and the smokeless powders; still fewer how nitroglycerine is made. With such a manual as Dr. Thomson's to consult, there can no longer be any excuse for such ignorance. The same may be said of a more abstruse subject—radium and radioactivity. The more scientific portions are enlivened by anecdotes, some gruesome and some humorous—the science master who discovers to his horror that one of his laboratory pupils has made a pint of nitroglycerine; how a miner's dog retrieved his master a dynamite cartridge with a lighted fuse; how a workman who had disappeared without leaving a trace was proved to have fallen into a vat of nitric acid by the phosphorus found on analysis. There are other digressions and "frills" which are out of place in a work of science. It may be true that science is still neglected in English Universities, and that teachers of science are underpaid (far less so than was the case in 1900), and that research is not organized or even encouraged by the State; but a comparison of English and German ideals in education requires at least a chapter to itself. Nor is this the place for an arraignment of scientific societies, or for claiming priority in a scientific discovery. When Dr. Martin contrasts the students of science and students of the humanities as researchers and "knowledge-cramming classes," when he suggests that the nation that has the best chemists will rule the world, and dismisses Aristotle as a philosopher who "probably put back scientific thought for 2,000 years," he provokes the retort, "Vous êtes orfèvre, M. Josse," and the man of letters will have no difficulty in finding joints in his harness. The book opens with Longfellow's familiar lines to Agassiz, here assigned to "the immortal Wordsworth," and it will seem almost a profanation to ascribe to the revelations of chemistry the tranquillity that Wordsworth found in

"The silence that is in the starry skies,
The sleep that is among the lonely hills,"

while the numerous inaccuracies in quotations might be adduced as proof of the non-transference of faculties.

Plant Life in the British Isles. (Types of the Natural Orders.) Vol. III. By A. R. HORWOOD. (6s. 6d. net. Churchill.)

This volume concludes the series, which now embraces 250 typical species described, and of these 121 have full or half-page illustrations from photographs. The photographs (mostly taken by Messrs. Flathers and Garnett) are singularly clear, and, with the letterpress, should enable the beginner to identify any of the plants. The author, who is custodian of the Leicester Museum, has added an appendix showing how the work may best be made to serve the student as an introduction to general botany.

Methods in Plant Histology. By CHARLES J. CHAMBERLAIN. Third Revised Edition. (Cambridge University Press—for the University Press of Chicago.)

It is just fifteen years since the first edition of this work by the Professor of Botany in the University of Chicago dealing with the principles and methods of staining, fixing, and mounting preparations appeared, and so numerous have been the improvements, both in instruments and in laboratory methods, that this constitutes, in fact, a new work. A chapter has been added on photomicrographs and lantern slides, and, in Part II, the directions for collecting material, with illustrations, are greatly enlarged.

The Study of Plants. An Introduction to Botany and Plant Ecology. By T. W. WOODHEAD. (5s. 6d. Oxford: Clarendon Press.)

This elementary botany provides all, and more than all, that can be required of candidates for matriculation and the Senior Locals.

It might also serve the teacher of junior classes, but not as a textbook. Ecology, as indicated in the title, assumes a more prominent part than in most school botanies, and morphology is treated chiefly in connexion with plant habitat. A number of experiments that can be performed by the pupil himself are interspersed. These, however, are not graduated or arranged in order of difficulty. Thus as early as Chapter IV we have one on geotropism with the klinostat. There is an ample provision of diagrams and photographs. The main defect seems to us that it attempts to cover too wide a range. For instance, the history of classificatory botany may be made highly instructive, but as here told in a couple of pages it will leave no lasting impression.

The Mathematical Analysis of Electrical and Optical Wave-Motion on the basis of Maxwell's Equations. By H. BATEMAN, M.A., Ph.D. (7s. 6d. net. Cambridge University Press.)

This book is a valuable work on the application of Clerk Maxwell's electromagnetic theory to the equations of wave-motion, and in particular to those portions of the subject for the understanding of which an advanced knowledge of mathematics is unnecessary. At the same time it should be mentioned that the author makes free use of mathematical work with which few students become acquainted before the close of their University career. The book, interesting as it is, is therefore far beyond the range of the school course.

Five-Figure Mathematical Tables. Compiled by E. CHAPPELL, B.Sc. (5s. net. Chambers.)

The principal tables contained in this book are those of the logarithms of numbers and of their reciprocals, the antilogarithms of numbers, the logarithms of logarithms, and the antilogarithms of logarithms of numbers. The author proposes that the use of the word "logs" should be regularized, Napier's original word being unpronounceable. But, when he suggests that "illogs," "lologs," and "illologs" should be regarded as contractions for antilogarithms, &c., we think that mathematicians will refuse to follow him. Apart from the terminology, however, the printing of the tables is wonderfully clear, the page being large and the space ample.

Mathematical Papers for Admission into the Royal Military Academy and the Royal Military College for the years 1905-1914. Edited by R. M. MILNE, M.A. (6s. Macmillan.)

This volume includes the papers of the last ten years on geometrical drawing, practical measurements, and elementary mathematics, which, at Woolwich and Sandhurst, are included under the general heading of mathematics. It consists of a simple reprint of the papers, the editor's part being confined to the provision of answers, which, if we may judge from a few test cases, are accurately given.

The Psalms in Human Life. By ROWLAND E. PROTHERO, M.V.O. Fourth Edition. (2s. 6d.)

We are glad to see a new edition of this deservedly popular book. The idea of illustrating the influence of the Psalter from history was distinctly a good one. Mr. Prothero has drawn his illustrations from various periods, but has arranged these in due historical sequence in a series of chapters, starting from the early ages of Christianity, and embracing the Middle Ages, Reformation, and subsequent religious developments (Huguenots, Puritans, the Scottish Covenanters) down to 1900. The book covers a wide range of reading, the principal authorities on which this is based being given in an appendix (pages 365 to 383).

Lessons from the Old Testament. Part II: Trinity Sunday to All Saints. By the Rev. A. S. HILL SCOTT, M.A., and the Rev. H. T. KNIGHT, M.A. (3s. 6d. net. Oxford University Press.)

This volume is the second part of a work which provides "notes critical and expository on the passages appointed for Sundays and holy days" in the Lectionary of the Church of England. These "notes," as the authors explain, have been thrown "into the form of a connected statement, such as could be read from the lectern as a prelude to the actual reading of the passage." Whether such a novel practice would be desirable is doubtful. The "notes," however, are well adapted for being worked up into expository discourses. They are clear, and written from the standpoint of modern criticism. Some good illustrations are introduced.

S. Aurelii Augustini: Liber de catechizandis rudibus. Edited by WILLIAM YORKE FAUSSET, M.A. Second Edition. (Methuen.)

A new edition of this handy text has appeared fifteen years after the publication of the original edition. The notes have been carefully revised, and some additional matter has been introduced. This particular text may well be recommended as an introduction to the study of St. Augustine. "It touches on the leading heads of Augustinian doctrine, and contains a forecast of the last and

greatest of Christian apologies, the 'City of God.' It is brief and uncontroversial. . . . It gives an incidental picture of Church life at a time when the Church of Christ had entered upon a new phase of her existence." There are some illuminating remarks on the diction of Augustine on page 122.

Bible Stories for Children. (Nelson.)

The stories are mainly of children from the Old Testament—of Joseph and his Brethren, Moses in Egypt, Samuel, and David. In the second part we have the Nativity, the Flight into Egypt, and a selection of parables and passages to be learnt by heart. The anonymous narrator adds, not unskillfully, touches of local colour, and the pictures will attract children; yet as teachers we should prefer to use from the very first the Authorized Version.

English Folk-Song and Dance. By FRANK KIDSON and MARY NEAL. (3s. net. Cambridge University Press.)

Mr. Kidson is responsible for the first section on folk-song and Miss Mary Neal for the second on folk dances. Both parts form excellent introductions to their subjects, with full bibliographies for further studies. Mr. Kidson sketches the origins and changes in folk music, and classifies the kinds of songs, including children's singing games. He records attempts at collecting folk-songs in the sense of "songs and melodies born of the people and used by the people as an expression of their emotions and for lyrical narrative." In discussing the quality of folk-song, he regards the strongest and most valuable feature as displayed in its earnestness and good faith—a song does not live unless the feeling expressed is common and human. Miss Neal gives much valuable information in her introductory chapter, and throughout she traces dances to their religious origins, and reflects on their influence through the ages. In realizing that "all primitive forms of dance and drama are attempts to express man's worship of the natural forces and facts of life" she has helped to assert for dancing that high rank among the arts which in recent times has been denied it. After sketching the various references to folk-dancing before the twentieth century, she describes how the revival of the Morris dance occurred and how (we gather mainly through her exertions) it has become so widespread. A plea for the natural development of the dance is entered, so that nothing strained or artificial should creep in with official recognition and books of instruction.

Great Schools of Painting. A First Book of European Art.

By WINIFRED TURNER. (5s. net. Sidgwick & Jackson.)

We can cordially recommend Miss Turner's book for children. It deals with the schools of Italy, the schools of Germany and the Netherlands, and the Spanish school. The author shows a real insight into the child's point of view and children's lines of interest. We can well imagine that such a book would set a child upon the path of appreciation of pictures, a side of art-work far too much in abeyance at present in our schools. The black-and-white pictures are excellent reproductions. Miss Turner has wisely chosen mostly from National Gallery pictures, so that the illustrations can serve as reminders of originals children should easily be able to see.

Anthology of English Prose. By S. E. GOGGIN and A. R. WEEKES. (2s. 6d. Clive.)

This collection of prose passages, ranging from Mandeville to Thomas Hardy, is intended as a companion volume to the *Tutorial Textbook and Tutorial History of English Literature*, but the introduction, giving a bird's-eye view of English prose, and the brief biographies prefaced to each author's work give it an independent value. The passages chosen are most of them familiar to the adult reader, but it may be contended that this, from the student's point of view, is a recommendation, and they are all characteristic of the several authors. The glossary is intended to supersede notes, and we agree with the editors that there is no need to distract and dissipate the student's attention by explaining every minute allusion and reference. Yet we think that many of the extracts, especially those from plays and novels (which are numerous), do need notes explaining the situation in giving the context.

Art in Flanders. By MAX ROOSES. (Heinemann.)

The latest volume of "The General History of Art Series," by the Director of the Plantin-Moretas Museum in Antwerp, has acquired an unexpected and melancholy interest since it was compiled. Many of the records and works of art on which it is based have perished in the cataclysm, and the author's concluding words, testifying to the past greatness of Belgium, her recovery from a period of decadence, her originality, independence, and promise for the future, though we are confident that they will still be justified, should have been couched in different terms. Besides four full-page coloured plates, there are over three hundred inset illustrations. The photographs are excellently reproduced, and some, especially the portraits, are beautiful in themselves, but all will serve as fruitful reminders to those who have seen the pictures

and buildings. The letterpress supplies just what we look for in a guide-book, and rarely find, a critical description of the picture, with date and present locality, and a biographical account of the artist in relation to his times and school of painting. There are full bibliographies and an index.

Life in a Railway Factory. By ALFRED WILLIAMS. (5s. Duckworth.)

Mr. Alfred Williams will be known to many as the Wiltshire poet and prose idyllist. Here he records the experience of twenty-three years as a "hand" in the sheds. He is a faithful chronicler of what he has seen and known, and he writes as Wordsworth wrote, with his "eye on the object." He makes no pretence to be either a man of science or a political economist, and he frankly confesses that he writes from the workman's point of view. The main reform that he advocates is a week of forty-eight hours, so as to allow two clear days of rest. In July 1914 the average hours per week in the Swindon Railway Works were 54, and the average wage, if we exclude foremen at the top and unskilled labourers at the bottom of the scale, was about 30s. Whether in this shape the reform is feasible we cannot pretend to judge, but Mr. Williams will convince most readers that both justice and expediency demand a change in this direction.

Lowell's Fireside Travels. With an Introduction by E. V. LUCAS and Notes by F. A. CAVENAGH. (3s. 6d. Clarendon Press.)

This is the first English reprint of a volume known to few even of Lowell's admirers from a copy that Mr. Lucas picked up on a London bookstall. We should not rate it so highly as the introducer. There are wit and humour, and a polished satire, keen observations of men and Nature; but there is also a superabundance of learning and preciosity. He has not shaken off the dust of the lecture-room, and we miss the easy grace of Heine's *Reisebilder*. To track all his allusions would be almost as hard a task as to annotate Burton's *Anatomy*. We have to thank Mr. F. A. Cavenagh for elucidating many of them, but notes on *Nunc dimittis, habitat*, and the like are surely superfluous.

(1) *A Book of English Essays (1600-1900).* Selected by S. V. MAKOWER and B. H. BLACKWELL. With Notes by A. F. SCHUSTER. (2s. 6d. Oxford University Press.) (2) *Dream-thorp.* By ALEXANDER SMITH. With Introduction by HUGH WALKER and Notes by F. A. CAVENAGH. (1s. 6d. Oxford University Press.) (3) *Essays in Criticism.* Second Series. By MATTHEW ARNOLD. (1s. net. Macmillan.)

What is an essay? The dictionaries give us little assistance, and the best answer we know to the question is to be found in Prof. Walker's *Introduction to Alexander Smith's Essays*. (1) Includes such different types of essays as Bacon's *Of Superstition*, Goldsmith's *Asem—an Eastern Tale*, Macaulay's *John Bunyan*, and Pater's *Notes on Leonardo da Vinci*. It is a well chosen miscellany, but we cannot agree with the editors that Bacon used the word in the sense of "a test or assay," not of "an experiment." The notes are brief and clear, but not illuminating. A class that has to be informed that Palmerston was a Liberal and Disraeli a Conservative, or needs an explanation of "tables of interest," will not care to know that Addison's *Essay on the Georgics of Virgil* was written in his twenty-first year, or be likely to look up the reference; but they will be curious to know who were the characters in the famous literary quarrel so delicately handled by Thackeray in *De Finibus*. (2) Alexander Smith leapt into sudden fame with his *Life Drama* in the early fifties, and then suffered an eclipse from which he has never emerged. Prof. Walker vindicates his claim to a distinguished place among poets of the second order, and a still higher place among the essayists whose prose is tinged with poetry, as De Quincey's, Pater's, and R. L. Stevenson's. Not even the prefatory note of "C." is needed to commend (3), but we may call attention to the price.

Marlowe's Dr. Faustus and Goethe's Faust, Part I. Introduction by Sir ADOLPHUS W. WARD. Notes by C. B. WHEELER. (2s. 6d. Humphrey Milford.)

If only by way of contrast it is an advantage to study the two plays, so alike in name and subject and yet so different, in one convenient volume. The Introduction deals fully with the sources of both plays, and discusses the doubtful points in Marlowe's life, and the text and date of his plays and poems. Here the editor is on his own ground, and to praise his work is supererogatory. In treating of Goethe there is little to be done but to condense and arrange what has been already said. We regret that Anster's translation has been chosen in preference to Bayard Taylor's, or even Hayward's prose version, here dismissed as "rather bald." The Notes to the two plays are in inverse ratio to their length. Those on *Dr. Faustus* are full and instructive, while those on *Faust* are meagre, and make no attempt to correct Anster's mistranslations.

Letters Written in War Time—XV-XIX Centuries. Selected and arranged by H. WRAGG. (1s. net. Humphrey Milford.)

No apology was needed to introduce this volume of "The World's Classics," compiled by Mrs. Wragg. The letters are as varied in kind as in date. We like best the *intime* Paston letters and those of Lady Mary Wortley Montagu, Horace Walpole, and in particular of Lord Collingwood. Some of Burke and Wellington are rather despatches than letters, and of Burke's letters on the French Revolution, addressed "To the Public," it cannot be said that "they were never intended for our eyes."

"Bohn's Standard Library."—*The Letters of Percy Bysshe Shelley.* 2 vols. Edited by ROGER INGPEN.

In the preface to his 1909 edition of Shelley's letters, Mr. Ingpen says: "The following pages contain a total, including a few fragments, of about 480 letters—that is to say, considerably more than three times as many as have appeared in any one previous collection. Of these, 38 letters, so far as I am aware, have not been printed before, and upwards of fifty contain hitherto unpublished matter." In the reprint of 1911 a few more letters were added, and some further emendations and additions have been made in preparing the book for "Bohn's Standard Library." The care Mr. Ingpen has evidently spent on his task; the number of letters collected; and the biographical notes on Shelley's correspondents and on some of the people (e.g. Mrs. Boinville) referred to in the letters, make these volumes a very welcome addition to the library. The type is clear and pleasant. We find the headings to the pages sometimes useful, but occasionally more suggestive of cinematograph films than of Shelley's correspondence—i.e., "Come and live with us," "Brothers of my soul," "Hogg and Harriet." Among many interesting notes is the account taken from the *Century Magazine* for October 1905 of Shelley's Tanyrallt adventure, "for 92 years one of the inexplicable events of the poet's life."

All's Well. By JOHN OXENHAM. (1s. net. Methuen.)

We connect the name of John Oxenham solely with novels, but, as we learn from the cover of *Bees in Amber*, fifty-two thousand, and of his *Hymn for the Men at the Front* four million, copies have been sold. This attractive little volume contains the *Hymn* and one lyric that will go straight to the hearts of all who watch and pray at home:—

"Where are you sleeping to-night, my lad,
Above ground—or below?
The last we heard you were up at the front,
Holding a trench and bearing the brunt;
But—that was a week ago!

We would gladly have quoted the whole. For the rest, the poems are uneven and unpolished; but they are all sincere, and not mere *vers d'occasion*.

English Grammar, with Analysis and Parsing. By H. G. SMITH and G. H. BELL. (1s. 6d. Mills & Boon.)

A very simple grammar, giving the fundamentals of English accidence and syntax, and we do not see why the author should limit its use to secondary schools. The nomenclature of the Committee on Grammatical Terminology has been adopted, but this will help, not hinder, pupils who are not learning French and Latin. Orthoëpy and Orthography are named as the first parts of grammar, but of Phonetics and Spelling there is not a word. We should like to see the classification of nouns as common, collective, abstract banished—at any rate, from elementary grammars. Some warnings might have been added against common errors in English, and these would have furnished variations on the exercises, which are somewhat dull. We can, however, commend the Grammar as a successful attempt at simplification.

A Book of Northern Heroes. Compiled by A. J. DICKS. (1s. Ralph, Holland.)

We welcome these selections from Northern Sagas, including the little known *Kalevala*, in a new edition.

Hans Andersen's Fairy Tales. First Series, Second Series.

Edited by J. H. STICKNEY. (Each 2s. Ginn.)

This selection is graduated, the simpler and shorter tales appearing in the First Series. They are prettily illustrated in black and white by Edna F. Hart. The text is a *contamination* "of the four or five translations current in Europe and America." Why not straight from the Danish?

First Steps in English Grammar. By FRANK RITCHIE. (1s. Longmans.)

Mr. Ritchie has had long experience as a preparatory-school master, and knows what young shoulders will bear. He has had the courage to let the old grammarians, from Lindley Murray to Mason, go by the board, and give only as much as children can be expected to understand. Thus, we have provisional definitions of the parts of speech, confessedly imperfect, but sufficient to enable

the pupil to pick out the verbs, nouns, &c., in a sentence. "First Steps" will lead the pupil safely over the analysis of the simple sentence.

Philips' Synthetic Maps. By E. G. R. TAYLOR. (6d. net per set. G. Philip.)

There are eight sets of maps: *The World, Europe, Asia, America, Africa (North and South), Australasia, and The British Isles*. Each set consists of two coloured foundation maps and eight transparencies, adapted for superposition on the coloured physical or political map, or two transparencies may be combined. For each set a stout Manilla case is provided. In the hands of a skilful teacher with a fairly advanced class, this novel application of the synthetic method may prove a great success, but there must have been much careful spade-work before the maps can be profitably employed.

Bell's Geographical Illustrations. By M. DOROTHY HARDY.

This set of six coloured illustrations are suitable for the early geography lessons of children of seven or eight. They are clear and brightly coloured, and likely to interest small children.

Introduction to African Languages. Translated by A. WERNER. (4s. 6d. net. Dent.)

The names of both author and translator of this monograph are sufficient guarantee of its value. Herr Mimhof is Director of the Hamburg Colonial Institute, and Miss Werner is Swahili Lecturer at King's College, London, and is well known for her articles on African subjects in the *Journal of the African Society* and elsewhere. The book consists of a series of lectures designed to arouse the interest of non-specialists as well as of those personally connected with Africa. The lectures are most stimulating and suggestive, and are notable for a modesty not always inseparable from German research. The translation is admirably clear, and in some instances English examples of phonetic changes have very sensibly been substituted for the German originals. It is much to be regretted that Miss Werner has not added a few more notes of her own, and there is no Index. Statements such as that on page 106, that Fulani has become a trade language, or that on page 155, that inflectional languages are confined to the Caucasian race, need correction. The black and white map in the English edition is very much less clear than the tinted one of the German edition.

Sicilian Studies. By the Hon. ALEXANDER NELSON HOOD. (5s. net. Allen & Unwin.)

We welcome this collection of studies by the Duke of Bronte—to give the author his Italian title, already known to us by his delightful *Tales of Old Sicily*. Some of the essays and stories have appeared in the *Fortnightly* and other monthlies, and it is pity that they are not dated. We doubt whether Mr. Hood would write in the present year of grace as he did at the time of the Mafia and Italian Socialism. The sketches are brief and vivid, and make no pretence to be exhaustive. The Notarbartolo *procc's*, which might have furnished Victor Hugo or Browning with a whole romance or epic, is related in as many pages as it took years, and we cannot gather from the text the date. Does *upocrates* (*sic*) mean properly "an explainer"?

The History and Economics of Transport. By ADAM W. KIRKALDY and A. DUDLEY EVANS. (7s. 6d. net. Pitman.)

Transport is a recognized subject prescribed by the newer Universities and schools of economics for degrees and diplomas in commerce, and an adequate textbook has long been a desideratum. The two authors, one Professor of Finance in the University of Birmingham and the other Secretary of the Birmingham Exchange, in this full and methodical history, brought down to the outbreak of the War, supply the student in a convenient form with the information he has hitherto had to collect from multifarious and not easily accessible sources. It is a history, not a treatise, and the reader is furnished with the data and left to draw his own conclusions. Much of the matter—for instance, the discussion of the State Purchase and Government Control of Railways—will interest a wider circle. The History of Canals bulks large, and the Report of the Royal Commission issued in 1909 is severely, but not unjustly, criticized. We should have welcomed a full account of the Liverpool and Manchester Ship Canal, to which there is only a passing reference. Little, again, is heard of the Panama Canal, but in this case it may fairly be pleaded that the commercial effects of this gigantic venture have still to be seen.

Bramble-Bees, and Others. By J. H. FABRE. Translated by A. TEIXEIRA DE MATTOS. (6s. net. Hodder & Stoughton.)

The death of the great naturalist as the latest volume of this uniform English edition of Fabre's works was passing through the press adds to it a poignant interest. Who can read unmoved the biographical fragment entitled *The Helicti*? Fabre was stricken with pneumonia and, as he believed, at the point of death. Ready

to depart, in the firm faith that the after-life must have higher and fairer things to teach us, he still wished to take leave of the Hymenopter, "my fondest joy on earth," and sent his son out to make for him a final observation. The ruling passion was strong in death. As an observer, no naturalist of this generation save Darwin can compare with Fabre. He was content to observe and to record his observations with a literary grace to which Darwin was a stranger. Of evolution and natural selection he knew little and cared less. "Others may reason, and welcome; 'tis we who know," was his proud yet modest boast. Mr. de Mattos is an accomplished translator. We should have welcomed a few more notes, and there was no need to affix "Translator's note" to each conversion of French metres into inches.

Whittenbury College. By ALICE M. CHESTERTON.
(3s. 6d. Nelson.)

Whittenbury College is a domestic science college, and this is the first schoolgirls' book we remember to have come across which deals with the life at these new institutions. The book is brightly written, the characters are alive and individual, and this new setting brings a welcome change.

Messrs. Cassell send us a selection of Letts's *Diaries*, which offer this year even a greater variety of form, size, and binding.

Messrs. Macmillan have sent us the Key to "A New Algebra," Parts IV, V, and VI, by S. BARNARD and J. M. CHILD (8s. 6d.), and to "Plane Trigonometry," by H. S. CARSLAW (6s. 6d. net).

Among recent volumes of the "Collection Nelson" we may call attention to an admirable translation of Erskine Childers's *Riddle of the Sands*, by Jeanne Véron, *Poésies* (Alfred de Vigny), and *Numa Roumestan* (Alphonse Daudet). (Each volume 1s.)

We have received from Messrs. T. C. & E. C. Jack some specimens of their school pictures. They are printed by an entirely new process from photographs or, when these are not available, they are based upon drawings. Roughly, they are divided into three series—Classical, Geographical, and Historical. They are printed on strong cartridge paper, and may either be hung framed or unframed on the walls or used with a patent holder supplied by the publishers, which can be hung over an easel or blackboard. While on a close inspection certain defects may be found in the new process, yet on the whole the pictures are excellent, clear and strong in light and shade, without hardness; most effective and instructive as decorations for the schoolroom. The size is 20 in. by 28 in., or with margin 29 in. by 35 in., and they are sold at the very reasonable price of 1s. 6d. each, subject to discount. Among the specimens sent to us we would specially mention "The River Tiber and the Tomb of Hadrian," "Venice and the Grand Canal," and "Moreton Old Hall, Cheshire."

WAR MAPS.

(1) *Map of The Western War Area*. Being one of the series of "Oxford War Maps" issued by the Clarendon Press. (12s. 6d. to 17s. 6d. net, according to mounting.) (2) *Bacon's New War Map of South Central Europe*. (6d. or 1s. net.) (3) *Philips' Relief Model Map of Central Europe*. (4d. net.) (4) *Philips' Pictorial Pocket Atlas and Gazetteer*. With War Supplement. (1s. net.)

(1) Naturally the war has stimulated the publication of maps—four recent specimens lie before us. The Oxford *Map of the Western War Area* is a fine example of the art of the map-maker. It is 60 inches square, 8 miles to 1 inch, with contour lines and layered colouring. It embraces the Seine Basin, Belgium, and the Rhine Lands, with the S.E. part of England, and the adjacent seas, and is compiled by the late A. J. Herbertson (editor of the series) and H. O. Becket. Sea level is neutral (white) and there are six shades of brown to mark levels from 100 to 1,200 metres, as well as a pale green for land below sea level. Nuances of blue similarly indicate depths of the Channel and North Sea. There are also six different marks for the graded populations of towns, and, of course, the usual graphs and signs for railways (double and single lines), canals, the political frontiers of 1914, fortresses. We cordially commend this admirable work for the use of Colleges, Schools, Clubs, Polytechnics—indeed, for all institutions whose directors can afford to buy it. It is well worth the money; the wonder is that it can be produced at less than a guinea. We know that a copy to the Free Club for Soldiers and Sailors in St. Martin's Lane, W.C., is much appreciated.

(2) *Bacon's New War Map* embraces the eastern area, extending north to Warsaw, south to Greece, east to Sebastopol, west to Budapest. It is in fine bold colours, and distinguishes clearly the frontiers of Serbia, and the adjacent kingdoms of the Near East whose boundaries and conflicts have served as an excuse for the conflagration of Europe.

(3) Is a convenient contour and relief model of *Central Europe* in bold colouring at 4d.

(4) Philips' well known and popular *Pictorial Atlas* is now issued with a *War Supplement*, the western area bound in with the frontispiece, the eastern at the end of the book. It contains a convenient summary of British and German Army organization. It is a book so handy for reference and travel that the reviewer retained it for these purposes.

Contour Wall Map, illustrating Military Operations in the Seine and Rhine Basins. (Bacon.)

This is an exceedingly clear contour map on a scale about 16 miles to 1 inch. It shows the main towns, railways, canals, and steamship routes. The map is strongly mounted and varnished.

TEACHERS' GUILD ON L.C.C. REDUCTIONS OF STAFF.

THE Council of the Teachers' Guild desires to draw public attention to the serious injury to educational work in London that is involved in the reduction of staff, both in secondary and in elementary schools, that is now being carried out by the Education Committee of the London County Council. We recognize that education, like all other departments of public life, must expect to suffer at this crisis in our national history, and we believe that teachers are willing to make any personal sacrifice that may be necessary in the interest of national economy, but we think it important that any sacrifice of educational efficiency should be made with a full realization of its gravity, and with a clear understanding that it shall be only a temporary measure. Recent educational advance has been achieved largely through the reduction in the size of classes, and the resulting possibility of more specialized teaching and closer personal attention. The changes now being made will not only involve larger classes, but fail to take account of the special circumstances of different schools, and will tend to reduce the work of the most efficient schools to the level of the less efficient.

As a temporary measure, it may be our duty to acquiesce in this policy, at a time when many of our male teachers have volunteered for military service. But we foresee the danger that, in the demand for economy that will rightly be made after the War in all departments of public expenditure, the present policy may be retained, or even extended. We believe that our most pressing need, after the War, will be for greater educational efficiency, and that the sacrifice of educational progress is the one sacrifice that, as a nation, we must not allow. The welcome that has been given by a section of the press to the action of the London County Council, and the fact that other Educational Authorities are already adopting the same policy, lead us to feel that bodies like our own ought not to allow it to be supposed, by their silence, that they are not alive to the injurious effect, particularly in the teaching of science and modern languages, of the reduction of staff that is now being made, and to the importance of restoring, at the earliest possible moment, a standard of staffing at least as large as that which is now being abandoned.

UNIVERSITIES AND SCHOOLS.

LONDON.

The incendiary bombs dropped from Zeppelins are alone able to pierce the gloom which overhangs "the London district." So long as the War lasts there is not likely to be any great University development in London. Sir Henry Miers has left by the Manchester express, and the office of Principal remains vacant. Advertisements inviting candidates for the post were widely published during the summer vacation, but, according to report, no action is contemplated at present in filling the appointment.

The military activities of the University continue without abatement. From the outbreak of War up to the end of August, 1,521 cadets or ex-cadets of the University O.T.C. had proceeded to commissions, and 189 commissions were obtained before the War, giving a total of 1,710. In addition 245 students or graduates, who had not served in the University O.T.C., obtained commissions on the recommendation of the University. Apart from the large number of students or graduates who have obtained commissions through other channels, well over two thousand officers have been provided for the War through the University O.T.C. or

by direct recommendation. Distinctions obtained by ex-cadets include one V.C. and more than ten Military Crosses. This is a creditable record, because it exhibits the spirit of sacrifice, both as regards willingness to serve and, what is not less important, preparation for service. The list of graduates and students killed in action, as prepared in connexion with the memorial service on All Souls' Day at the Temple Church, includes some two hundred and fifty names, and all the colleges and hospitals connected with the University are worthily represented. The address of the Bishop of Kingston at this service was admirable alike in thought and expression. The Chancellor (Lord Rosebery) and many other high officers of the University attended.

The first Principal of the University, Sir Arthur Rücker, who retired some seven years ago, has recently died. Owing to failing health he was not able to maintain close relations with the University after his retirement. The appreciations of his life and work, which have so far been published, have done scanty justice to the work which he accomplished and attempted in the development of higher education in London. The incorporation of University and King's Colleges in the University owed much to his ability and perseverance. In his work in connexion with the reorganization of the Royal College of Science at South Kensington, it may seem that he was less successful. The facts may appropriately be recalled, both in justice to his memory and for their bearing on the present position in University politics. The reorganization started with an announcement by Lord Rosebery, as Chancellor of the University of London, of a generous benefaction and a well conceived scheme for the establishment of a new school of applied science in the University. For reasons which have never been explained, the Board of Education assumed paternity of this scheme. In 1904 the President of the Board set up a Departmental Committee to inquire into the Royal College of Science, at that time a Government institution. Rücker was appointed a member, and took an active part in the examination of witnesses and in the other proceedings of the Committee. The Committee's final report, signed early in 1906 by Mr. (now Lord) Haldane and the other members, proposed the combined scheme now known as the Imperial College. As to the relations between the Imperial College and the University, the report stated that, if changes could be made in the character and constitution of the University which would make it desirable to amalgamate the College and the University, the Committee wished to see such modifications made, and the two institutions amalgamated accordingly; and they recommended that the relations of the College to the University should be made the subject of inquiry by a Royal Commission. Rücker had evidently worked in the Departmental Committee for the closest possible association of the College with the University. With Lord Reay he signed a dissenting note to the report, urging that steps should be taken, as soon as possible, for the incorporation of the College in the University, and, in the body of the Report, a statement of the arguments in favour of incorporation is printed, which, one may assume, was drawn up by Rücker, or, at least, embodied his views. After referring to the action already taken by the University to unify higher education in London, the statement concludes: "It would be a serious step to check a spontaneous movement, which is thus healing the divisions and rivalries that have hindered the progress of University education in London for three-quarters of a century, by reverting to the principle of dual or multiple control, which, as experience has shown, tends neither to economy nor efficiency." In the negotiations which followed the publication of the Report, Sir A. Rücker, as Principal of the University, with Sir Edward Busk as Vice-Chancellor, continued to fight strenuously for the same principle of unification. At one time it appeared possible, during Mr. Birrell's Presidency of the Board of Education, that the questions at issue would be settled by agreement, without reference to a Royal Commission. But, in the end, other counsels prevailed, and the seeds of disunion sown by Lord Haldane's Committee have borne their poisonous fruit. I do not doubt that the failure of these negotiations embittered the closing years of Rücker's official life; but his work during these difficult years showed his characteristic loyalty and singleness of purpose, and one may safely add, in the light of subsequent events, his soundness of judgment.

OXFORD.

The *Magazine* published at the end of term the number of undergraduates in residence this term. There are still almost seven hundred. It would be interesting to know what proportion of the number are English-born students. Our numbers will be still further attenuated by the new War Office Regulations affecting the Officers' Training Corps. The purpose of these regulations, to prevent men from remaining term after term in the O.T.C. without taking a commission, is obvious, but the remedy of abolishing

the O.T.C. altogether after the end of February is hard on the University. No one is to be given a commission through the O.T.C. who joined it after Lord Derby's scheme, and those who joined before that date must take a commission by the end of February. The disadvantage of these new regulations is that there are a certain number of men, newly elected scholars and others, who are still too young to get a commission. They had been advised to come up for one or two terms and get their course started while getting military training in the O.T.C. at the same time. That was alike their best academic and military course, but it seems now impossible. However, as the rule that commissions in the future are only to be obtained through the ranks is to apply universally, it could not be expected that an exemption should be made for this small minority. The stopping of the O.T.C. will not, of course, affect the School of Instruction for Officers at Oxford with which the staff of the O.T.C. are occupied. That school has been recently raised to four hundred.

The Vice-Chancellor has issued a memorandum dealing with University finance, from which it appears that the deficit on the year's working of over £1,500 has been more than made up by special contributions, so that the University will start 1916 with a credit balance of over £2,000. This is as gratifying as it was for most of us unexpected. Of the £1,700 collected from abnormal sources, £700, however, came from the balances of the Common University Fund and the Faculties Fund and will not be again available. The outlook for 1916, therefore, is not bright.

The first Research Certificates awarded by the University of Oxford to women students have been granted to Miss F. Bickersteth and Miss A. Cuming. Both are members of the Society of Oxford Home-Students, and offered dissertations on subjects of mental science. These certificates would, had the recipients been men, have entitled them to proceed to the Research degree of B.Sc.

LEEDS.

The Long Vacation and the Michaelmas Term have alike seen the steady continuation and extension of the War work of the University. During the vacation the students had more leisure to help in munitions and in other ways. The women students, during the weeks when the National Register was in preparation, gave organized help which drew an acknowledgment from Mr. Walter Long. The Chemical Department has carried further its co-operation in the attempt to cope with the mortality from infection of wounds with some results of the highest value, which have been utilized in the military hospitals, both here and in France. This War section of the University work in all the Departments was honoured by a visit from His Majesty the King, on Monday, September 27. His Majesty's example has been since followed by many others, including members of the County Councils of the West, East, and North Ridings of Yorkshire, and of the Leeds City Council and Education Committees. The work of the Agricultural Department received special notice. A large number of applications from girls and women for training at the University farm at Garforth have been received, of which only a limited number could be accepted owing to want of hostel accommodation.

The ordinary work of the University has gone on well, in spite of the large number of absences (including those of twelve heads of departments) both among the teaching and administrative staffs. The reign of economy has set in strongly, and all, young and old, vie with one another in cutting down expenses. The University has also co-operated with the City in producing a War Economy Exhibition.

Among the most highly prized recreations of the term has been a visit from the Serbian sculptor, M. Meštrović, followed up, as it has been, by the arrival of specimens of his work at the City Art Gallery.

Meanwhile, the University Roll of Honour, which stood at 919 at the beginning of term, steadily grows.

WALES.

In the recently issued Report of the Central Welsh Board on the Inspection and Examination of the County Schools, there are some very interesting statistics and comments, which enable us to gain an insight into the general character of the work of the schools and their progress. The total number of pupils actually increased during the last school year, and is higher than any previously recorded, and we are informed that during the current year there is a still further increase. In the year 1914-15 there were 15,203 pupils on the school roll—7,174 boys and 8,028 girls, a total which represents an increase of 1,010 pupils. It would be interesting to discover the reason for this influx of new pupils into the schools at this time of crisis, and also to know whether in any other part

Henry V. Richard III.
Romeo and Juliet.

London: G. BELL & SONS, Ltd., York House, Portugal Street, W.C.

of the Kingdom the number of pupils in the secondary schools has shown an upward tendency. The scope and extent of the written examination are apparent from the tables supplied in the Report. No less than thirty-three different subjects were examined, ranging from Metallurgy, taken by one school, to subjects like English Language and Literature or Mathematics, taken by all the 102 schools, and altogether 53,087 scripts were sent in by the pupils. One cannot help asking whether there is any other examining body which recognizes such a variety of subjects or allows the schools under its control such a wide latitude in the choice of subjects. To say that the Central Welsh Board examination system tends to foster uniformity and rigidity in the face of these facts, is, of course, an absurdity, and yet even such a well informed member of the Central Welsh Board as the Registrar of Aberystwyth College states, at a Prize function, that the students at the College, though remarkably well trained, are like "postage stamps"! If that is the case, it is not the fault of the system, but must be due to neglecting to take advantage of its elasticity and freedom.

In the 102 schools there are 365 assistant masters and 364 assistant mistresses. The average salary paid to assistant masters is £156. 14s. 4d., and to assistant mistresses £126. 10s. 7d.

One of the minor educational problems to which attention is persistently being called in Wales is the position of this examination, and therefore it is instructive to find out whether it fulfils an important function in the schools. From the Report we see that last

The Junior Certificate Examination.

year 2,354 pupils entered for it, from which figure it seems to be a fair inference that, if it were suspended, considerable dislocation of the work of the schools would result. This fact seems now to be recognized, for, during the current month, there has been a strong consensus of opinion that, in spite of the Welsh Department's plea for economy, the examination should be retained. The important counties of Glamorgan and Monmouth, as well as the overwhelming majority of the Heads of the schools, have voted against its abolition, and therefore it is difficult to see how the Central Welsh Board can act contrary to their wishes, whatever its own opinion on the question may be. The proposed Conference at Llandrindod Wells is likely to be a fiasco. It is understood that Education Authorities have a strong objection to suspending the Central Welsh Board Junior Examination, while the Department raises no protest against holding the various Junior Locals, and so placing pupils from the intermediate schools at a serious disadvantage compared with the pupils from other secondary schools in Wales. Besides, the saving in money is not, in their opinion, sufficient to justify such a sweeping change in our examination system. On the other hand, it is only fair to recognize that in the boys' schools work is being carried on under great difficulties owing to the extensive enlisting of the staffs.

The proposed amalgamation of the Higher and Honours Examinations will probably be carried into effect during the current year.

We regret to record the death of that distinguished Celtic scholar and antiquarian, Sir John Rhys. He started life in comparatively humble circumstances, but, by dint of great natural gifts and indomitable perse-

Sir John Rhys.

verance, he gained for himself a European reputation in his own particular branch of study. It is not too much to say that he was the founder of the modern school of research into Welsh history and origins. As Principal of Jesus College, he exercised a wide influence over Wales, and under his regime the advantages of that ancient Welsh institution were made more easily available to Welshmen than ever before in its history. He was a member of the Executive Committee of the Central Welsh Board from its start, and, though he did not take a very active share in its deliberations, yet he exercised a quiet influence in the direction of efficiency and the maintenance of a high standard of work. Naturally he was rather conservative in the matter of curriculum. It was chiefly through his initiative that the Authorities of Jesus College, Oxford, were induced to award annually two scholarships of the value of £80 to the best pupils in the Honours List in Classics or Mathematics of History, and by this means a University career became possible to many a brilliant but poor Welsh boy. Of his work in his own special departments of study, others must speak. We can only recognize his geniality, his modesty, and the sincerity of his interest in everything that appertains to Wales and to the Welsh people.

SCOTLAND.

At the annual meeting of the governors of University College, Dundee, it was reported that the number of students, which in recent years averaged 200, had fallen last session to 138, and that in the present session there were only 116 matriculations. The teaching

staff has been considerably reduced. There is a small deficit in the accounts; but the finances of the College are, on the whole, in a satisfactory condition.

The news of the death of Emeritus Professor Alexander Moody Stuart, LL.D., has been received with much regret by his former colleagues and students.

Glasgow.

He was Professor of Law in the University from 1887 to 1905, when he retired on account of ill health. A learned lawyer and an excellent teacher, he did valuable service to the University during his tenure of the Chair. The Senate has appointed Professor Noel Paton to be one of its assessors on the University Court.

The late Mr. William Dey, LL.D., formerly Rector of Old Aberdeen Grammar School, and for many years a member of the University Court, has bequeathed to the University £8,000 as an endowment for the purchase of books for the University Library.

Aberdeen.

On the recommendation of the Senate, the University Court has approved the addition of Military Science to the Department of Science as a subject for graduation in Arts. The new subject is classed as cognate with geography. Only those cadets of the O.T.C. who pledge themselves to apply for a commission in His Majesty's Forces at the end of their University training will be allowed to select the subject of Military Science as a qualifying course for graduation in Arts, and students who take Military Science and Geography as cognate subjects will be required to take Military History as one of their remaining subjects for the degree.

At a recent medical graduation, Principal Sir William Turner mentioned that the number of medical students enrolled for the present session is 676, as compared with 1,111 at the corresponding period in 1913. The number of first-year students is 147, compared with 188 in 1913. The annual report of the University Union shows that about 1,800 members and former members are on active service. Over 1,500 hold commissions in the Regular Army or in the Navy Medical Service.

The University Court has issued a draft Ordinance requiring candidates for degrees in Music to pass the Arts or Science Preliminary Examination instead of the special Preliminary Examination which has hitherto been required.

At the meeting of this Committee in December it was reported that only a few of the 541 students who completed their training in June and October 1915 had not yet been placed in schools. It is expected that in a short time all the students will have received appointments. 392 of the students, trained under the Committee since its institution, have enlisted in the King's service, and of these 80 hold commissions. The Committee sent its congratulations to Corporal James Lennox Dawson, who was a student in training from 1909 to 1913, and who has been awarded the Victoria Cross.

Glasgow Provincial Committee.

IRELAND.

At a meeting of the Senate of Dublin University on December 4, Robert Macalister, LL.D., Secretary of the Royal Irish Academy, was elected a representative on the Council, in place of the Archbishop of Dublin, Dr. Bernard, who has resigned.

A meeting for conferring degrees was held on December 20, the Vice-Chancellor presiding, when the successful candidates in the autumn examinations received their degrees.

A large and representative congregation assembled at University College Chapel in St. Stephen's Green, on November 27, when a solemn Requiem Mass was offered up for the souls of past and present students who have fallen in the War. The celebrant was the Rev. Dr. Hickey, Dean of Residence, and an appropriate address was given by the Rev. P. Walsh, M.A., Dean of Residence. There are 237 students of the National at present serving with the Colours.

A meeting of Convocation was held on December 14, when the Annual Committee was elected, and a resolution was carried recommending that facilities, such as exist in some of the leading Universities in Great Britain, for lectures delivered in the evening, and leading up to degrees, should be granted in the National University also.

At a meeting of the Monaghan County Council, at the end of last month, a discussion arose on Irish as a compulsory subject for the County Council scholarships, some members opposing it on the ground that it involved injustice to Protestant schools and rate-payers. (Educational issues do not appear to have entered into the deliberations of the Council: one member declared incidentally that German was a language which "no decent man" should know.) This discussion drew forth a leading article in the *Irish Times* next

day, which was followed by an animated correspondence in the columns of that journal on compulsory Irish in the Entrance Examination of the National University. Among the opponents of compulsory Irish were Mr. John Dillon, M.P. (who, however, pointed out, what is quite true, that compulsory Irish for the County Council scholarships and compulsory Irish for the University Entrance Examinations were two distinct questions, the latter being a domestic one which should be decided by the University Senate), and Prof. Alexander, of University College, Cork, who declared that the regulation was injurious to the interests of the University, both as hampering its freedom in arranging courses and driving away possible students. On the other side appeared Prof. Macalister, of University College, Dublin (whose linguistic accomplishments make him a highly competent witness, while his religious and political opinions place him beyond the suspicion of any bias towards the popular side), who defended compulsory Irish both on educational and national grounds and also vindicated the character of the entrance examination in Irish, affirming that it was rigorously kept up to a high standard; and Prof. Henry, of University College, Galway, who showed that his College, at any rate, had flourished since the adoption of compulsory Irish, and pointed out that Protestants, who formed one-quarter of the population, had two other richly endowed Universities open to them if they objected to it.

According to a statement made by Mr. Birrell in the House of Commons recently, the numbers of students who matriculated in the National University in 1913, 1914, and 1915 were 562, 604, and 743 respectively.

The Senate of Queen's University, Belfast, at its meeting on November 26, passed a resolution calling on all members of the University (including the teaching staff and students) who were of military age and fitness, to respond to the King's appeal for more men at the present crisis; and also deciding that no person of military age and capacity should be appointed to any office in the University (except in extraordinary circumstances) during the period of the War, and that all appointments made during that period should be regarded as temporary.

War economies are beginning to be severely felt in the educational world. The annual Government grant of £300 to the Royal Irish Academy of Music is to be withheld next year; the Governors of the Academy have entered a protest, which, it is to be feared,

will prove unavailing. The Department of Agriculture and Technical Instruction have issued a circular letter to all concerned stating that their provisions for special classes for teachers in primary and secondary schools will be suspended during 1916, as also their summer courses of instruction in educational methods and manual training. This will involve the discontinuance of the so-called "grants" or capitation fees paid to the Irish training colleges or other institutions which train teachers in any subject recognized by the Department's program. The Irish colleges (which are independence and self-governing bodies, wholly outside the organization of the Gaelic League) will feel the loss of the financial aid, and have held a conference among themselves lately to consider the situation.

In an interesting and thoughtful article in the current number of *Studies*, the Rev. E. Cahill, S.J., Rector of Mungret College, Limerick, deals with the subject of "Education and the Land." He points out that Ireland is essentially an agricultural country, and that two-thirds of its wealth and four-fifths of its land are in the hands of what he describes as a "rural middle-class"—farmers and landed proprietors, that is to say, whose means enable them to provide some education beyond that of the primary school for their sons. Yet the majority of this class educate only those sons whom they intend for the priesthood or a profession, not those who are to succeed them as cultivators of the soil. This is due to the academical and bookish character of our secondary education, which is designed wholly with a view to the Civil Service, the Universities, and the "learned" professions, and is, moreover, modelled on English lines, ignoring anything of a distinctively national type. The percentage of boys who enter the professions is larger in this country than perhaps in any other; and a very large number of these emigrate, finding no employment at home.

On November 26 there died in Dublin Dr. James H. Pollock, D.Sc., M.R.I.A., Lecturer on Physical and Metallurgical Chemistry in the Royal College of Science, an ardent researcher, who had suffered much from experimenting with X-rays. Dr. Pollock organized the R.C.S. Voluntary Aid Department on the outbreak of the War, and was a zealous worker in the public cause.

All students of Irish archaeology and mythology will pay a tribute to the memory of the late Sir John Rhys, whom many of them will recollect having listened to with pleasure when he lectured on "Irish Oghams" during a visit paid to Dublin several years ago.

BLACK'S FIRST GERMAN BOOK

AN ELEMENTARY COURSE ON DIRECT METHOD LINES
FOR THE FIRST YEAR.

By **L. H. ALTHAUS,**

Organizing Mistress in Modern Languages to the West Riding Education Committee, Yorkshire.

SMALL CROWN 8vo, CLOTH, WITH FOUR FULL-PAGE ILLUSTRATIONS IN COLOUR AND OTHERS IN BLACK AND WHITE.

PRICE **2/6**

A Phonetic Edition of the first part of the book is also in the press.

AUTHOR'S NOTE.

In adding yet another to the many First-Year Books already in use, I had very definitely in mind certain needs, which in my experience both as Teacher and Inspector of Secondary Schools I felt had not yet been met.

The ease with which an average class assimilates the usual early German Vocabulary affords an even greater temptation to the Teacher to go too quickly than in French. As an inevitable consequence, in so highly inflected a language as German, the scholar is plunged into the difficulties of Declension and Case long before he has had sufficient practice in the simpler but all important matter of Gender, with the result that he is more or less always struggling with both difficulties at the same time. This is contrary to all Direct Method Teaching rightly understood, and is responsible for most of the failures of which we hear. (It is because the underlying principles of Direct Method Teaching are too often so superficially understood that results are disappointing.)

In taking the earlier and simpler side of German life for my text, I have hoped to provide a more sympathetic material than that perhaps afforded by a more modern side, and at the same time a vocabulary of everyday life suited to the requirements of the Scholar of the First Year.

A. & C. BLACK, Ltd., 4, 5, & 6 SOHO SQUARE, LONDON, W.

WORCESTERSHIRE EDUCATION COMMITTEE.

STOURBRIDGE GIRLS' SECONDARY SCHOOL.

Wanted, at the beginning of the Summer term, 1916, or earlier if possible, an ASSISTANT MISTRESS for the above School. Principal subject, French. Some subsidiary subjects will be required, and applicants should state the subjects they can offer. Preference will be given to applicants who are under 35 years of age, and who have had not less than one year's continuous residence in France or French-speaking countries, and not less than two years' Secondary School teaching experience—preferably in one school. Salary £125 per annum, non-resident. Applications, accompanied by copies of recent testimonials, should be sent to Miss E. M. FIRTH, Head Mistress, Secondary School for Girls, Stourbridge. Forms of Application (No. 279) may be obtained from the DIRECTOR OF EDUCATION, County Education Office, 37, Foregate Street, Worcester. [Y 129]

BRADFORD GRAMMAR SCHOOL.

Applications are invited for the post of HEAD MASTER, rendered vacant by the resignation of the Rev. W. H. Keeling, M.A., LL.D., which takes effect at Easter 1916. Candidates are requested, not later than January 10th, 1916, to state their age and qualifications, and to send their testimonials to the Clerk of the Governors, FRANK JOHNSON, Esq., 5 Bank Street, Bradford, from whom the conditions of appointment can be obtained. The annual stipend is fixed at £1,000. No house or other emoluments.

BLACKIE & SON'S NEW LIST

Experience has proved that Messrs. BLACKIE & SON'S Books take a foremost place by reason of their scholarly editing, clear type, strong binding, and reasonableness in price.

This most successful History of recent years is now issued in THREE styles.

THE GROUNDWORK OF BRITISH HISTORY.

BY

GEORGE TOWNSEND WARNER, M.A.,

Sometime Fellow of Jesus College, Cambridge; Master of the Modern Side in Harrow School; Author of "A Brief Survey of British History," &c.,

AND

C. H. K. MARTEN, M.A.,

Balliol College, Oxford; Assistant Master at Eton College.

Complete in One Volume. With Maps, Time Charts, and Full Index. 764 pp., super-crown 8vo, 6s.

In Two Parts, 3s. 6d. each:—Part I, 55 B.C.—1603; Part II, 1603–1911.

For the convenience of those requiring the book for certain examinations it is also issued—

In Three Sections, 2s. 6d. each:—Section I, 55 B.C.—A.D. 1485; Section II, 1485–1714; Section III, 1714–1911.

A New Book by Mr. GEORGE TOWNSEND WARNER.

ON THE WRITING OF ENGLISH.

Crown 8vo. Cloth extra. Price 3s. 6d. net.

"Mr. Warner has written a book which the critic can read with profit and enjoyment, apart from any notion he may have of improving his English. When he talks to the point of adjectives or abstract nouns or ways of beginning an essay, his ideas go farther than recommendations to a schoolboy. He is explaining incidentally what for most grown readers is a mystery, namely, why some writing is loose and dead and other writing is precise and living. We would rather read this book, purely as criticism, than much of what passes as intellectual and literary appreciation to-day. The faults he uncovers and analyses in the prose of the schoolboy essayist are common to the English of too many popular writers, and can always be studied afresh with advantage."

Saturday Review.

Just Published. A book of immense interest to the student of strategy.

HOW WARS WERE WON.

A Short Study of Napoleon's Times.

By GEORGE TOWNSEND WARNER, M.A.,

Sometime Fellow of Jesus College, Cambridge; Master of the Modern Side in Harrow School.

With many Maps in Colour and in Black and White. Demy 8vo, price 5s. net.

There is no nation more liable to suffer from a lack of some knowledge of broad facts of military history than our own. The sea has dazzled us; we have been often told that all that is essential to us is sea-power, whereas in fact history of the past and events of to-day show that sea-power alone cannot decide a great war in our favour. It is a defence, and a help, but no more. It may prevent a Continental enemy from invading us, but it does not, *per se*, enable us to subdue him.

EUROPE SINCE NAPOLEON.

BY

ELIZABETH LEVETT,

Scholar of Lady Margaret Hall, Oxford; late History Mistress, Edgbaston High School; Tutor in Modern History, St. Hilda's Hall, Oxford.

Crown 8vo. With Maps. Price 3s. 6d.

Some Press Opinions:

"A sensible, clearly told book."—*Times*.

"Miss Levett summarizes the history of every European nation since the Napoleonic era. . . . Miss Levett has succeeded well in her task."—*Morning Post*.

BLACKIE'S ENGLISH TEXTS.

6d. each. Blue limp cloth covers. Over 100 Volumes. To be used in correlation with the study of **English Literature and History.**

BLACKIE & SON, LTD., 50 OLD BAILEY, LONDON.

GLASGOW AND BOMBAY.

Supplement to THE JOURNAL OF EDUCATION.

No 558.

JANUARY 1, 1916.

PATON'S LIST OF SCHOOLS AND TUTORS. An Aid to Parents in the Selection of Schools.

1108 pages, crown 8vo. Red Cloth, 2s. ; post free, 2s. 6d.
NINETEENTH EDITION NOW BEING PREPARED FOR PRESS.

THIS BOOK secures for its advertisers a far larger proportion
of *definite results* than any other publication of its kind.

Liverpool Courier.

"Parents who are puzzled where to educate their children would do well to consult 'Paton's List.'"

Field.

"More useful this year than ever."

Referee.

"A real aid to parents bent on making a wise selection."

Bexhill Chronicle.

"A valuable advertisement for those who want pupils."

Eastern Morning News.

"Should be known to all parents."

Western Mail.

"As large and useful as ever."

Financial Times.

"Indispensable to parents and guardians."

Wimbledon Boro' News.

"No more useful help to puzzled parents."

Guardian.

"As comprehensive and informing as the public now expects this well known work to be. It is indeed a most satisfactory book of reference, alike in the width of its scope and the fulness of detail supplied."

A House Master.

"Thanks to your friendly help, I believe I shall be full next term."

A West Country Girls' High School.

"I am glad to say I find I have got another pupil this term through the advertisement of the school in your book, so I am glad I was persuaded to keep it in."

An East Coast Boys' School.

"I frankly acknowledge that I obtain more pupils through you than through any other agent, or indeed from all the agents combined."

A Preparatory School.

"The majority of my boys come, of course, from personal recommendation, but I may say that, of those who come as a result of advertising, practically all have heard of the school through your 'List of Schools.'"

St. John's, Newfoundland.

"We selected the school for our daughter from your book which gives names and particulars of schools in England."

"I happen to be Chairman also of the Empress Club for Ladies, where we have nearly two thousand members, and if you care to present that Club with a copy I shall be pleased to place it in the Reading Room."

"The copy you sent us last year has had considerable use in the Central Reference Library."

"Your book is always in great demand."

National Library of Ireland, Dublin.

"This important publication occupies a prominent place in our Reading Room, and is in frequent use."

Darjeeling Club.

"A very useful publication to our members."

Tasmania.

"The book is duly to hand, and has been perused with interest. It will be kept in the Office, and will be at the service of any client who is in want of information as to what schools are available in England."

Lahore.

"I am much obliged by your sending me a copy of your 'List of Schools.' It is a most useful book, and has already been much in demand by my friends."

Bombay.

"We think this book will be of use to us in giving information to any of our clients who wish to send their children to Europe for education."

McGill University.

"We have received the copy of the 'List of Schools' which you have been so kind as to present to the Library. May I send you in return my most cordial thanks for this gift? The book is one which will be of the greatest service to us, because we frequently have inquiries in regard to specified schools which it is difficult for us to answer, and concerning which your book will readily supply the desired information."

Ontario.

"Many thanks for the copy of your new 'List of Schools.' It is interesting and may be useful, as I am often asked to recommend an English school."

If you are wanting Pupils, write us, with copy of your Prospectus.

HENRI LOUIS CHATELAIN.

By Prof. E. DE SELINCOURT.

[The writer has kindly suggested to us that this memoir of a distinguished colleague, contributed to the *Birmingham University Magazine*, might interest our readers.—ED.]

HENRI LOUIS CHATELAIN was born at St. Quentin, Aisne, in August 1877. He came of good Picardy stock. For more than two centuries the Chatelains had been small farmers and peasant proprietors in the country round St. Quentin, and his father was the first member of the family to settle in a town. His boyhood was passed at home, attending a Roman Catholic school in the neighbourhood; and at an early age he showed clear signs of those qualities of mind and character which were afterwards to distinguish him—a passion for knowledge, an inflexible will, perfectly concealed by a modesty of demeanour which seemed to belie it, and a selfless devotion to all who had a claim upon his love. A typical action of his boyhood suggests how truly the child was father to the man. When he was twelve years old a loss of family fortune reduced the Chatelains to severely straitened circumstances, and the boy at once resolved that he would take up his share of the burden. He had a born student's love of books; but rather than ask his parents to buy the more costly volumes necessary for his school course, he would return to the classroom out of school hours to prepare his lessons in borrowed copies. This act of self-denial can be best appreciated by those who are themselves a prey to the passion that he mortified; Chatelain practised it for years of his school life in secret, and it was only long afterwards that his mother came to know of it.

The boy left St. Quentin at the age of eighteen. His mind was crammed with undigested knowledge; but the narrow rigidity of his school had discouraged thinking, and his intellect, which craved for light and freedom, saw no path through a tangle of promiscuous facts. His intellectual development dates from his entrance to the *lycée* at Lille, where he was brought into touch with more inspiring teachers and with schoolfellows of an eager, inquiring spirit like his own. Here, among others, he met Guernut, the closest friend of his after life, even then aflame with enthusiasm for the cause of the people, and now the devoted Secretary of La Ligue des Droits de L'Homme et du Citoyen; and each of the youths did much to stimulate the mental growth of the other. To all his comrades Chatelain's passion for study was a continued source of wonder. For some months together he would work fourteen hours a day, and Guernut recalls how he would wake by chance at two or three in the morning to find his friend, who lay in the bed next to his own, still reading by the light of a flickering candle. A year at Lille was followed by a year as *boursier* at a *lycée* in Paris. Then, as Chatelain was about to enter the University, his health gave way; he had always been delicate, and he was now judged to be in consumption. For two years he was laid completely aside.

Those two years were the spiritual crisis of his life. He had long broken with the narrow faith of his childhood, which had stunted his intellect and made claims upon his liberty of thought which his reason could not surrender; and he had as yet no settled scheme of life to take its place. For a time he drifted without an anchor. It seemed to him that he was dying; or, worse, that he would only live to be an encumbrance to those who relied on his support; it seemed that he had scorned delights and lived laborious days for nothing, and that his ambitions, worthy as they might be, had landed him in utter failure. But gradually, with slow returning health, he built up for himself that serene philosophy of life, part stoical, part Christian, which, whilst it gave unfettered scope to his intellect, expressed itself in unswerving devotion to the ideals of self-culture and of altruistic service. In 1899 he entered the Sorbonne, and for nine years worked there and at L'Ecole des Hautes Etudes. His masters were the most distinguished scholars of French language and literature—the late Gaston Paris, Brunot, Thomas, Reynier, Lanson; and all were quick

to recognize him among their ablest pupils. His University record bore out their judgment. In 1901 he was Licencié ès Lettres, Mention très bien; in 1903 Agrégé de Grammaire; in 1908 Docteur ès Lettres, Mention très honorable; in 1909 Lauréat de l'Académie des Inscriptions et Belles-Lettres (Prix Lagrange). The two works which he submitted as theses for the Doctorat, *Le Mystère de Saint Quentin* and *Recherches sur le Vers français au XVe siècle*, were recognized on their publication as a notable contribution to the study of French language and literature.

Such labours might well occupy the undivided energies of a young scholar, but they barely formed a half of Chatelain's activity. For all the while he was earning his own living, taking private pupils and writing for reviews. By this means he not only supported himself, but was able to help his family. Two of his sisters he brought to Paris, and himself paid for their education. He postponed for a year one of his examinations, on which his future career depended, that he might collect and edit for the press the poetry of a promising young comrade who had died before obtaining due recognition. A needy friend never turned to him in vain. It was, perhaps, his weakness that he seemed to court responsibility: he accepted it as a challenge to his manhood, a test of his powers of will and of endurance. He was generous as only poor men can be generous, for they alone can know the joy of giving what they cannot spare. For what is ordinarily called society he had neither time nor inclination; he found his relaxation in the company of a few chosen friends, among whom he was valued as an eager and brilliant talker, quick in repartee, with a wit always courteous, but touched with an irony which gave a piquant savour to his criticisms of men and things.

After six months as a master at the *lycée* of Tourcoign he was elected, in 1910, to the Professorship of French at Birmingham. He was not slow to prove himself as fine an organizer and teacher as he was student. He made no fuss, and from the first the French department moved on oiled wheels. Some murmurs broke from the weaker students at his quiet insistence upon a steady rise in the standard, but the wailing died away as his wiser pupils realized that on no other terms could their own success be worth the having. On his senior class he made an impression which will not easily be effaced, and the influence of his example as a scholar devoted to learning and to the interests of his pupils spread beyond his own department. He had now some leisure in which to pursue his private studies. He continued his researches in medieval French, in which he was an acknowledged master. He was making an exhaustive examination of the prose style of Calvin, of which he published the first instalment; he was preparing for the press an edition of the *Contemplations* of Victor Hugo. Like a true Frenchman, he was at his best in his own house. He had married soon after he came to Birmingham, and bringing into domestic life the same spirit of loving devotion as he had shown in boyhood, he was met with a fuller and deeper understanding. He loved the simple pleasures of life. He delighted in music, especially perhaps in Mozart. For his little garden he felt an attraction inherited from his forefathers, and he was often to be found hoeing about his cabbages with an air of pre-occupation, or patiently stoking the autumnal bonfire. Entirely happy in his home, conscious of the success of his work, both as scholar and teacher, secure in the affection of pupils and colleagues, he desired nothing but the opportunity to develop still further the career that he had shaped for himself. "I have reached," he said, "the summit of my life."

I well remember that morning in August 1914 on which I received his letter with the news that he had been called up in the fourth reserve of the French army, and was on his way to join the colours. For it was then that I first realized the beauty and the strength of his character. We had not been intimate. Though Chatelain understood English well enough, he spoke it badly, and the very ease and exactness with which he could convey the subtlest shades of thought and feeling in his native language increased his sense of a baffled purpose when he struggled with a foreign tongue. But he knew my love of France and, perhaps for that reason, he wrote more freely, and with the full confidence that I should understand.

He had accepted this last call as he had accepted responsibilities all through his life. Others might protest at the tragic waste of putting to the tasks of a common soldier a man of his delicate constitution and fine intellectual endowment. He was a true son of France, and he was ready simply, and without a murmur, to pay the debt of sonship. For two years in his youth he had been brought face to face with death, and it had no terrors for him. He feared nothing for himself: his thoughts were only for those he left behind. It seemed to me that he wrote with a premonition that he would not return. And I never expected to see him again.

After some two months' training in Brittany, Chatelain was sent into the trenches near Soissons. His was a sad regiment. Drawn from that part of France which was in German occupation, few of his comrades could receive those letters and little gifts from home which are the chief alleviation of the soldier's lot, few indeed could know whether their homes were still standing, or what fate had been meted out to those who were most dear to them. In this Chatelain was more fortunate; for, though he had no news of St. Quentin, he could hear almost daily from England. His interest in our University never flagged, and in "les jeunes esprits qui m'étaient confiés." He was kept *au courant* with all the details of the work he had left behind, and wrote constantly to give advice or offer suggestions. He had always a somewhat morbid passion for newspapers, and with these he was kept well supplied; after the arrival of the post he might often be found retailing to his comrades the latest War news, translating *Land and Water* to a group of his officers, or patiently explaining the inwardness of a joke from *Punch*. The lavish hand with which he dispensed the welcome contents of the parcels sent out to him from Birmingham, something, too, in the personal appearance of the giver, but more in the kindly sympathy which accompanied his gifts, earned for him among his fellows the sobriquet of *Jésus Christ*. They were for the most part rough sons of the soil, without understanding of the finer sensibilities of the scholar and the gentleman; but they realized instinctively the essentials of his character. For Chatelain himself never forgot his own homely stock. He loved the people, and, despite his education, their *bonhomie* and simplicity of mind struck in him a responsive chord. He was always humorously tolerant of weakness or stupidity, whether in academic circles or in the world at large. The coarse language of the *pioupiou* he found *un peu ennuyeux*; but after all it was of the earth earthy, it was not the clinging mud of city life. And he felt that in their rough way they respected him, and that he had won their confidence and love.

Here is an extract from one of his letters, of intrinsic value as a vivid impression of war from the pen of a true artist in words, doubly valuable to us from its revelation of the man he was, both in himself and in his relation with the life about him:

... Notre bois, et le village derrière nous ont été bombardés méthodiquement plusieurs fois depuis dix jours; nous avons chaque jour un tué, un ou plusieurs blessés. C'est le côté sanglant de la guerre. On frôle la mort.

Jeudi dernier, devant nos propres tranchées se sont présentés 120 femmes, vieillards et enfants (Français) chassés des lignes allemandes et demandant, drapeau blanc en tête, à être reçus par nous. Notre général, consulté par téléphone, ordonne de les renvoyer, et, en cas de refus, de faire feu. Cette cruelle consigne connue fait se lamenter les femmes; les enfants poussent des cris déchirants et éperdus; nos soldats, les larmes aux yeux, s'indignent. Au bout d'une heure et demie, enfin, le général, après l'intercession du commandant, veut bien admettre que ces malheureux chassés, mourant de faim, de leurs villages, ne sont pas des espions. On les fait rentrer dans nos lignes et on les dirige sur l'arrière où ils seront bien traités. Voilà une autre épisode de terreur et de pitié.

Mais il y a des heures calmes dans toute cette tourmente. Je porte des ordres à toute heure du jour et de la nuit, à travers des sentiers de bois boueux et broussaillieux. Qu'il fasse une obscurité complète, le noir absolu, ou qu'au contraire, comme aujourd'hui, nous ayons une splendide matinée d'avant printemps où le gris-brille sur les feuilles mortes au-dessous des ramures gris-rose qu'attendent les bourgeons nouveaux, on sent la vie multiple de la terre qui respire et qui bientôt prendra un visage épanoui, tout

animé. On sent, à vivre ici, d'une vie primitive, à toute heure menacée, que tout ce qui nous entoure comblera notre vide si nous disparaissions; on sent la vérité du mot de Paulsen: "Alles ist beseelt"; tout a une âme. Et c'est une matière à recueillement qui distrait et console des horreurs de la guerre.

Hélas, beaucoup des pauvres hommes qui traînent ici sous l'uniforme une existence pénible sont hors d'état de goûter aux doux fruits de la contemplation. Leur âme, que des fatigues physiques plus prolongées que les miennes ont affaiblie, végète et ne produit plus que des exclamations toujours pareilles, des aspirations vers une paix qu'ils voudraient imminente et qui indéfiniment recule devant leurs yeux. Dans ma faible mesure, j'essaie de soutenir leur patience, de leur montrer l'immensité et la complexité de la tâche, de leur faire apprécier la grandeur du rôle joué par l'Angleterre sur les mers, et dans la finance mondiale, de les persuader qu'elle fait tout son possible, bien qu'elle ne soit pas talonnée, aiguillonnée par la présence des Allemands sur son territoire, pour nous aider à terminer au mieux cette douloureuse crise.

On reading such words one can well imagine what companionship with Chatelain must have meant to those worn and desolate-hearted men; they suggest, too, his own acute sensitiveness to pain—the source of all vital sympathy. But it is characteristic that, while he draws so tender a picture of the sufferings of others, he dwells upon his own consolations.

Of the physical hardships of those seven winter months in the trenches, doubly hard to a man of fragile health, untrained to outdoor life, he said little; and, in writing home, he always made light of the danger that surrounded him. It was rather from the picture of his strenuous efforts at washing his shirt in a puddle by the roadside or from his vivid and witty description of his exquisite sensations when, for the first time for three weeks, he slept in a barn behind the lines, and, unencumbered by sodden overcoat and boots, was able to feel his limbs move freely in the straw, that we realized by implication the sufferings that he had endured. And, if he railed at Fortune, it was not for dooming him to a fate for which he was by nature and training unfitted; it was only for endowing him with arms and legs not easily adapted to the narrow confines of a trench. "One is always," he wrote, "so painfully conscious of one's knees."

In April he was called from the trenches to act as telephonist to his battalion. But the privations and constant exposure of the winter had already done their work. A fortnight later he was struck down by a dangerous illness, and he lay for over two months in a rough field ambulance just behind the firing line. Early in July he was moved to a hospital in Paris, and here, on August 19, he died. Neither nurse nor doctor ever heard him complain, and, except when suffering intolerable agony, he was serenely calm. He seemed to lay down the responsibilities of life as quietly and simply as he had always assumed them. By his own modesty, perhaps, and by his faith in human nature, he was led to believe that the burden of duties he left unfulfilled would be shouldered by others as willingly and as efficiently as he had borne them.

Beside his grave, on August 21, his old and distinguished master, M. Brunot, spoke these restrained, but moving, words:

Depuis l'adolescence, Henri Chatelain a eu le sens du dévouement; aux siens d'abord il a rendu en secret les services les plus délicats. Devenu homme, il s'est donné tout entier à ses élèves; il est mort comme il avait vécu, pour son Devoir, pour son Pays.

Quelque modeste que fût le rôle qu'on lui avait attribué dans la défense nationale, il l'accepta, et s'il en sollicitait un autre, c'était avec le désir de rendre des services plus grands.

Sa mort est une perte pour la Science et pour la Patrie.

La Philologie-romane n'avait guère en France de meilleur ouvrier que lui; aucune des tâches qui eussent effrayé les plus patients ne rebutait son robuste courage. De cette période obscure et ingrate qui va de la fin du Moyen-âge à la Renaissance, il avait étudié les œuvres les plus fastidieuses pour y retrouver les faits épars qui expliquent l'évolution ininterrompue des choses.

C'était un philologue à la française qui avait des Lettres et qui savait voir le détail sans lunettes, de sorte qu'il n'avait qu'à lever la tête pour apercevoir les ensembles.

Personne mieux que lui n'analysait un livre ni ne découvrait plus vite ce qu'il apportait de nouveau à l'œuvre commune.

Les Universités de France l'eussent certainement rappelé un jour à elles ; en attendant il faisait en Angleterre ce qu'un Français a pu y faire de plus utile depuis vingt ans. Il y prouvait d'abord, par son exemple, que la Science philologique n'est nullement une spécialité allemande et que notre enseignement forme aussi des hommes qui méritent le titre et le rang de Maître. Il y travaillait en outre à ce rapprochement des esprits qui, mettant en contact la pensée anglaise et la nôtre, a préparé un rapprochement général et une intimité dont nous voyons aujourd'hui les fruits.

Il s'est consacré tout entier pendant plusieurs années à ce rôle de missionnaire et c'est un chagrin immense pour ceux qui avaient élevé cette génération et qui avaient mis leur espoir en elle, de voir tomber un à un avant la moisson tous ces épis murs. Il faut toute notre foi dans les destinées de la France pour compter encore que de pareils vides pourront être comblés.

Mais Chatelain, comme toutes les autres victimes qui se donnent si vaillamment, me reprocherait de terminer cet adieu sur ces paroles de tristesse. Combattons donc sans regarder, point de présage, comme le disait le vieil Homère : "Le meilleur des présages est de combattre pour la Patrie."

Puisse le sentiment d'un devoir noblement accompli, être une consolation pour ceux qui l'ont aimé.

A few days later M. Lanson wrote with even deeper insight :

... Le voici parti, après tant d'autres. C'est une perte pour la France, pour l'Université qu'il servait efficacement en Angleterre ; une perte pour nos études d'histoire littéraire où il avait déjà marqué sa place et où il était destiné à s'élever au premier rang ; une perte enfin pour moi qui l'avais distingué parmi mes premiers étudiants à mon début à la Sorbonne, et qui m'étais fortement attaché à lui. Il intéressait d'abord l'esprit par sa puissance de travail, par sa large curiosité qui le portait à la fois vers l'érudition philologique et vers les œuvres le plus révolutionnaires de la littérature contemporaine, par un tour d'esprit original et savoureux sans apreté et sans malignité. Mais bientôt on découvrait son cœur, cette riche et si discrète sensibilité, cette délicatesse scrupuleuse, cette loyauté fière ; et l'on se rendait compte que, quoique valussent en lui le lettré et le savant, l'homme était encore supérieur.

C'est pour moi la plus précieuse récompense de ma carrière que d'y avoir acquis l'amitié d'Henri Chatelain et de deux ou trois autres.

By the side of tributes like these, from the pens of masters in a language whose genius for clearness and precision is never more evident than when it is devoted to a noble and discriminating praise, words of mine may well sound rough and halting. Yet Henri Chatelain must not be celebrated in French alone. To us he gave much, and now, at least, his gift should be most precious. That gift was simply the living example of what France has stood for in the culture of the world. In his exact and patient scholarship, his lucidity, his intellectual love of truth, his *netteté d'esprit*, he was typically French, and his mental endowment gained strength and fragrance from the beauty of his character. He was resolute and courageous without the bluster of egoism. He was essentially good without a parade of virtue. His grace of manner, at once modest and sincere, preserved him from the taint of conscious superiority. Rich in capacity for enjoying all that life has to offer, he was yet utterly unworldly, for he saw both himself and the world about him in their true perspective, with a sense of proportion that is born of humour and of unselfishness. His was the serenity of one who has triumphed over circumstance, and is the master of his fate. Living intensely in the present, he yet lived and worked and died for the future. "After all," he said to Guernut in one of their last conversations, "what greatly matters is that our children should be better men than we are." That was his spirit, as it is to-day the spirit of France.

The tragedy of our life lies not so much in the passing from earth of a rare and beautiful personality as in our dullness in apprehending it when it is in our midst, and in retaining its inspiration when it is taken away. Yet the fault is ours if that inspiration is either faint or transient, for it lies with us to absorb something of its spirit into ourselves, and so, passing it on to others, to give it no illusory immortality. And I cannot believe that Henri Chatelain has died or lived in vain.

THE BIGGEST ROW IN DAME EUROPA'S SCHOOL.

By ASCOTT R. HOPE.

A GOOD many years have gone since the story was told of a famous fight in Dame Europa's school, but that might pass for a mere scrapping match beside the row started in our time. After that one, the bigger boys at least seemed to have got out of the way of fighting, unless with boxing-gloves on. Some of the smaller fellows, indeed, used their fists now and then, and there would be a scrimmage with outside louts who had more pugnacity than science, so that they were soon quieted. But the heads of the school showed no mind to risk blood-letting which might spoil their clothes and their chance of prizes or marks for good conduct. It was commonly supposed that these big fellows funked one another, but it might also be hoped that some of them were growing sensible enough to understand how bruising and flooring was hardly a becoming way of settling their disputes. Dame Europa often urged them to lay their quarrels before an umpire, and so they did sometimes, but the difficulty was to find any referee strong enough to make himself respected when tempers had been lost.

"And if you were not so fond of calling foolish nicknames, and sticking pens into each other when you ought to be busy over your own exercises," the old Dame often told them, "I should have a better right to advertise my school as the best behaved set of boys in the world."

For long there had been no regular cock of the school, unless John, who was at least leader in the games. He was hardly so big as some of the rest, but, being captain of the boats and the eleven, and generally having come well out of his fights, the other fellows rather looked up to him, though they might secretly envy him because he had more pocket money than the rest, and won most of the prizes he went in for. What helped to give him influence was the number of young relations he had, who sometimes squabbled with him or among themselves, but were sure to back him up against an outsider. So everyone else was shy of meddling with such a band of kinsmen, and John became so used to getting his own way that he grew lazy and careless. In his common mood of growling good-humour he was apt to forget how he must always be ready to hold his own as well as to stand up for weaker chaps, which had been his pride. He only laughed when some of his envious rivals called him slack or selfish, and he yawned when he heard them whispering that he was out of training. Fighting might be all very well for smouts in the lower forms, but when a fellow gets into stickups and tails, he is not so ready with his fists. John's own hardest fights had been with his classmate, Jean, at one time the most pugnacious boy of Dame Europa's school ; now they had both grown to have more sense than to care for giving one another black eyes.

While these two were now inclined to live in peace, they both had a new enemy in Hans, once a quiet and harmless boy, noted for spouting poetry and telling pretty fairy tales rather than for picking quarrels. He was the hero of that last great row in the school, when to everyone's astonishment he had given Jean a tremendous licking. After that he seemed completely to have changed his character, and even his looks, for he shot up like a toadstool, with a head swollen to twice its former size, on which what had been a kindly grin was turned into a fretful frown. Filled with jealousy, especially of John's position, he put on ridiculous airs, for ever boasting, challenging, and interfering with his school-fellows ; and he did not conceal that one day he meant to make himself what he called super-cock of the school. He was always a dab at inventing fine, long-nibbed words, which so puffed him up that he kept giving out how John was "decadent," and that it was his own destiny to go to the top, or, as he called it, to be the captain of Kultur.

One of his great grievances was about the plots of waste

land which Dame Europa had shared out among her head boys to turn into gardens in their play hours. The best of those had fallen to John, who got up early to have first choice; then he did well with the land through his turn for gardening, and worked hard to have a good show of fruit as well as vegetables. The ground chosen by Hans, on the other hand, still lay rough and weedy. This seemed mainly his own fault, as he did not take so much pains about digging and planting as about building a high wall round it to keep out trespassers. The less successful he was in his own garden, the more he coveted those of his neighbours, and he grumbled that he had not been treated fairly in the allotment. The soil alone was to blame, being too much shaded by trees, which he should have begun by cutting down. Instead of labouring patiently on what he had got, he made little secret that he intended to lay hands on a better "place in the sun." To do so, he understood that he would some day have to fight John, who, for his own part, wanted rather to be friends with him, and could hardly believe in his having such cheek. But by and by it became plain that Hans was not only training for a fight, but getting up a party of fellows to back him.

There was for one a cousin of his own called Hans-Hun, who sat next him in school. Hans had bullied this chap till he had nothing for it but giving in to him and promising to stand by his big cousin through thick and thin. On the other side of Hans-Hun sat another boy, called Giovanni, with whom Hans and himself had had many a row in old days, but now he was persuaded to join their league. They said it was for mutual defence, though nobody had any wish to harm them; but all the time this sly Hans, while talking big about peace, kept his eye open for a chance of getting up a fight when it would be likely to go in his favour. He practised with the dumb-bells every day, joined the cadet corps, and entered himself for the swimming and sailing races, in which some day he hoped to beat John.

"It amuses him and it doesn't hurt me," said John to himself in his careless way; but at last he was moved to suspect that Hans and those pals of his might some day fall on him by surprise. So, in turn, he had a talk with two more of the big fellows, Jean and Ivan, and these three agreed to stick together if the others tried to get up a row. All of them declared that a row was the last thing they wanted; yet Hans kept on crowing and cackling in a style to make everybody uncomfortable.

"I shouldn't wonder if that fellow was up to mischief!" John agreed with his new friends. "Well, I don't want to fight, but, by jingo, if I do —!" All the same, it was rather stupid of him to spend so much at the tuck-shop when he ought to have been saving his pocket money, getting himself into training as Hans took care to do. Ices and pastry are not good for wind and muscle. For all his bragging and bouncing, Hans also went on taking great pains with his lessons and gaining a good place in the school, with which he might have been content, and need not have been so fussy in calling attention to his industry. By way of amusement he set a fashion of playing "Beggars my neighbour" with expensive packs of cards marked not only as kings, queens, and knaves, but with such new devices as *Maxims*, *Dreadnoughts*, and *Airships*, and so forth. Dame Europa complained of this costly game; but how could it be stopped, when the monitors set the worst example of wasting at it time and money? If she scolded Hans, he said it was all the others' doing—that he himself was a model of good behaviour, who cared for nothing so much as *Frommigkeit* and *Wissenschaft*.

At last that cunning mischief-maker saw the chance for which he had been watching. The row began with Hans-Hun threatening to clout a small fellow beside him, whose fidgetiness, to be sure, was often provoking, but he flatly denied the charge of trying to stick a pin into his neighbour.

"Give it him!" whispered Hans, egging on his cousin to play the bully, while Jean and Ivan jumped to their feet with a cry of "Leave him alone!"

"Shut up there!" growled John, taking it that a word

from him would be enough to keep the peace. He seemed to have his own hands full of a quarrel with his fags, so the bullies thought he would not interfere.

"Now's my time!" chortled Hans. "I will polish off Jean and Ivan; and, when they have had enough of it, I may tackle that stuck-up John of theirs at my ease, when he can get nobody to back him."

Now, between Hans and Jean sat a little chap named Jan, a relation of them both, who had once been abominably bullied; but, because he was so inoffensive and industrious, the big fellows, some time past, had all agreed to protect him against ill usage. Hans had promised as well as the rest; but, to get at Jean in a hurry, he knocked the little boy down and kicked him to keep him quiet.

"I'll make it all right with you presently," said Hans, as he dashed on to get in a facer at Jean. But the small chap did not take it quietly. He hit out as well as he could, shouting lustily for help, which came just too late to set him on his feet.

"It's a shame!" cried the other fellows, as they made a ring round this sudden fight; but most of them were afraid to interfere. Not so John, who woke up in a moment, and, with a roar of "Stop that, you cad!" rushed to the rescue. So in a minute there were half a dozen of them at fisticuffs, hitting, wrestling, tugging in a wild scrimmage, the noise of which could be heard all over the place. Hans, to do him justice, fought with pluck and science, though it was all he and his big cousin could do to stand up against John and Jean on one side and Ivan on the other, the last a giant of a fellow who looked fit to crush both enemies had he not been rather out of condition. Before long Hans began to see that he wasn't going to have such an easy job of it; then he lost his temper and had the impudence to accuse John of getting up the quarrel.

"It isn't fair, three or four to two!" he bawled. "But come on, and see how I'll bash the lot of you!"

Of course, it was he himself who began, and then he had reckoned on having the odds on his side. Giovanni had promised to help him, but did not stir, disgusted by the lies his late friends told and by their foul blows. After thinking over it a bit he even ran to help John and Jean, when he saw how they fought fair and were like to win in the long run. Other fellows talked of joining in, but they thought it wiser to keep out of the row—at all events, till they saw who would get the best of it. But there was one plucky little chap nicknamed Jap, who was a home-boarder, and had been looked down on till lately, when he had shown that he could stand up to far bigger fellows. This youngster and John had agreed to back up one another in case of a row, and now Jap did good service by tackling Hans from behind, heedless of his kicks and cursing.

Only one boy, at first, cared to take the part of the bullies—a disreputable foreign fellow called Osman, who himself was an old hand at bullying. His dirty, lazy tricks made him unpopular in the school, where he had been notable chiefly for hanging on to other chaps and borrowing as much as they would lend him, till they found he did not pay up. He ought to have been expelled long before, but Hans, to serve his own ends, had taken him under his wing and taught him to use his fists after a fashion, so now he came forward to do what he could for that protector. It wasn't much he could do; but, fighting in a corner by himself, he added to the general confusion. He had lately been at loggerheads with a fellow who sat on the same dunce's form; yet, after a time, this lout actually joined in on his side, when Hans promised him, if they won, a box of Egyptian cigarettes and a pound of turkish delight.

A terrible confusion there was as the combatants went at it hammer and tongs, some of them too excited to keep to the regular rules of the ring. Soon, indeed, they were like to be blinded and deafened by the dust and the din. Forms and maps were upset, desks were broken, slates smashed, copybooks torn to scraps, and ink flowed as freely as blood. Poor Dame Europa, holding up her hands in horror and calling for order in vain, might well exclaim that her school

was ruined, that at the best it would take ever so long to set the damage to rights, that she could never again boast of her model scholars. And the struggle was like to spread beyond them. A big chap from another school over the water, looking in to see what was the matter, got some of the knocks that were going, and, when he complained, Hans told him so rudely to mind his own business that he was half-ready to take off his own coat and plunge into the fray. Most of Dame Europa's small boys, for their part, sat on a fence outside, looking on through the windows, half scared, half tickled by that rare spectacle of the big fellows fighting with so little heed for their dignity. All over the floor, it was such a rough-and-tumble fight that nobody, even in the safest corner, could be sure of not being dragged into it or of dodging out of the way of blows.

Hans-Hun, left to himself, would soon have had to give in, but his big cousin fought desperately, not only hitting out on all sides, but throwing about everything he could lay hands on—rulers, books, bottles, even the chemicals from the Lab. In his rage he didn't care if he set the whole place on fire. Through his cunning plans for taking Jean and Ivan by surprise, he had trusted to knock them both out in a few minutes; but, now that he saw what he was in for, Hans simply went off his head with rage and hatred. As soon as he began to be aware of the mistake he had made he tried to frighten the other side by noisier and angrier threats, at which they burst out laughing to make him all the madder.

"You'll have to pay for it!" he screamed at every smash. "It will take all your pocket-money for years, John, to settle my doctor's and tailor's bill."

"Who breaks, pays," chuckled back John. He had kept himself as fresh as paint and pretty cool through all the hurly-burly. But hard knocks always got his blood up, and, when he heard the other side whispering among themselves that they would soon have enough of it, he rolled up his sleeves a little higher as sign that he was coming on in good earnest.

"Shut up your nonsense, you big bounders, and listen for once to the truth," he cried out to them. "It's no good calling *pax* unless you are ready to throw up the sponge. All this row was your doing, and you have got to get such a licking that you will be in no hurry to do it again. So you may as well chuck it at once; else we are game to fight on till Christmas."

"So say all of us!" added his friends in a hearty chorus.

"Even if you all come to your senses by then, what is to become of my school?" wept Dame Europa. But nobody minded her threats of fines and impositions when all was over; and the fight is still going on, such a row as never was in any school, and, let us hope, never will be again.

MATLOCK HILL.

By S. P. B. MAIS.

I FIRST climbed that long white limestone road which leads out of the Derwent Valley on to the Tansley heights when I was five years old. My father had just been inducted to his first living there: before that we had lived among the Brecon Beacons in Radnorshire, so I was used to mountains. I should have been lost without them. All I can remember of that first day in the new, grey, cold country of Derbyshire was that the peasant folk who crowded to greet us were weirdly repellent, uncouth, grey and dour, like their own skies and stone walls. Had I then read any of the works of the Brontë sisters I should have noticed the strange resemblance to the country folk who came within the ken of those who lived in that other parsonage of Haworth, on the Penistone Ridge. I felt curiously lost, strange, outcast; a feeling came over me of which I have

never since been able to rid myself, although the Peak District has been my home now for twenty-five years. I remember that I ate damson jam on that first day, and that there was a swing in the garden. Beyond that I think my imagination plays tricks with me. Nothing else stands out clear; all is one blurred impression of discomfort.

It must have been years after that I stood on the high broad parapet of the Rectory garden wall and imagined vast hordes of marauding enemies, fresh from the conquest of Matlock Town, every building of which they had razed to the ground (I can still visualize the smoke blotting out the landscape), marching carelessly in fours up the steep white road, the full command of which lay before me. I had at my feet concrete floors, on which were mounted mighty cannon. I saw myself rushing to the church tower to ring the alarm, returning to fire my cannon right in the middle of the astonished, unprepared foe. I saw myself leading a mighty charge, driving the alien helter-skelter down the steep hill back on to the charred ruins of what had once been Matlock. I saw myself, later, decorated by the Queen for my valour—the hero of my neighbourhood, the saviour of my shire. Dreams! Dreams!

The nearest I ever got to the result of my castles in the air was when my father, through illness, had to go away for a whole year, and, on our return, the horses were taken from the shafts, and we were drawn by stalwart parishioners through a much-bedecked and garlanded village in a triumphal procession. On that day, too, there was damson jam for tea. By far my most obstinate memories of that long hill, however, are those which recall those morning walks with my mother, when I accompanied her on her shopping expeditions. I would always be late in starting, so that I had to run for half a mile at break-neck speed to overtake her, only to catch a severe cold by then having to crawl along at a snail's pace. Somehow small boys hate walking by the side of their relatives; there is something ineffably tedious and upsetting to their dignity in such a tame method of procedure.

About half-way down the hill we would be caught up by my father, who invariably (sensible man) bicycled. My mother as invariably met him with, "Oh! dear, dear: I am so glad you have caught us at last: I've had visions of skids and broken limbs ever since I started. Why didn't you come sooner?" He would mumble something about having to see the schoolmaster or the verger, which we both knew to be moonshine. It was the study fire and a fascinating book that had delayed him.

An hour later you could see us panting up the hill again, all overlaid with parcels, the bicycle converted for the nonce into a local Carter, Paterson's van, I with a precious copy of *Chips* or *The Boy's Own Paper* to console me for my packages.

Anon, we would rest on the wall "to let," in my mother's words, "that horrible creaking quarry-cart go past. I hate these carters' faces; we never see a human being." (Need I say that my mother was brought up in London?)

The day came when I possessed a bicycle of my own. How I used to love that steep descent then! Two miles to the station, and I could do it in under five minutes. Oh, the *facilis descensus . . . the revocare gradum!* Heartrending tales were poured into my ears of vain men who rode up steep hills only to die of exhaustion at the top. How many times have I thought—my heart thumping against my ribs, as, in spite of warnings, I stuck to my machine—that I should die when I reached the summit! Somehow all my life through I have never learnt not to hurry: I always seem to be rushing either up or down hills. I owe more of my character to that steep descent than I know. How many stories have I not fashioned as I pounded along alone in the slush and fog of a January day! How many articles and verses owe their inception to thoughts that have voluntarily moved me to (I am afraid) most inharmonious numbers as I climbed that self-same road!

One most tangible quality I most certainly owe to it. I should never have had the good fortune to succeed in

athletics if I had not trained my legs assiduously upon that stern disciplinarian path. It gave me wind and stamina, stout legs, and an enduring heart; but it gave more, much more, than this. On wintry afternoons, when the darkness was just closing in, I would stand at the nursery window and gaze out over the fields on to the narrowing white strip of road, and watch excitedly the lamp-lighter light up first one strip and then another of my favourite path, and I would scan it far and wide for any hint of a visitor or caller who would while away the tedium of the day. At teatime I would creep into the drawing-room and see my mother gazing rapt, too. "I wonder when your father'll be back. Oh! that must be he. No, not there. There!" she would say excitedly, pointing at the lamplighter or a solitary quarryman going slowly homeward. "He must be in soon; he promised to be back by four. I'm sure I can see him now. Yes, that's his hat." And all the time my father would be in the room, silently shaking with laughter, finger on lip, lest I should spoil the fun. "Why, here you are all the time, and I was positive that was you over by the mill. Come and look. Never mind; let's have tea."

At times it would be a wedding or a funeral that was due at two o'clock, when my father liked to be asleep. Then I would be posted at my window to watch for the glad or sorry cortège, and go down to warn him when it approached the church. On one great occasion in the year, the first Sunday in August, all the local Oddfellows and Druids would hold a mighty mass meeting and march with gaudy banners and martial music along this historic road up to the village green, where my father would preach to them. I never was so proud of him as then! He seemed to be the Druid of Cowper's *Boadicea*.

Then there came the days of the first motors. How we would fly to the windows and wonder whose they were, where they were going, what chance there was of ever having a ride in one! To-day we should not put down the book we were reading for a Zeppelin or aeroplane! Sometimes at night I would be awakened by the raucous cries or ribald songs or Methodist melodies of a football or cricket team driving home over the moors from a match, and, in imagination, I saw myself being bowled along an endless white road in a wagonette like theirs, crunching over the stones, swaying over the stones, singing my favourite songs on my way to El Dorado, Buxton, Timbuctoo, or Kynance Cove. Did I dream it, or is it true, that in early years our more godless villagers put wires across the hill at nights in order to despoil the passing cyclists of the eighteen-nineties? I know that they put ropes across about half-way down in order to take toll of all wedding parties on their way to the station. Our villagers had much of the *apache* about them.

There have been sad scenes on and about this strange, white, restless road. More than one poor girl in my short lifetime has crawled up in the dead of night out of the town, up this dreary, unsympathetic hill to our lonely moorland, and, unable to find solace in her misery, sought peace in the deep waters of our mill-dam. There is a dark part of the hill where it enters the pine trees that clothe the banks of the Tansley brook, which is said to be haunted to this day by the ghost of a young girl who threw herself over the bridge on a frosty night some fifty years ago because her lover had been drowned while skating on the dam just above. It is a road of moods, is this Matlock Hill. Open to all the violence of the West wind, you feel the pitiless forces of Nature at their worst as you grope your way in the inky blackness of a stormy November night down to the town, where lights and shops and music and masses of ever-moving human beings seem to take you into another world than that in which a moment ago you were battling single-handed with the blast.

Your mission done, you once more take the lonely road, and it is as if all the Furies of the Inferno were let loose to torment your miserable soul. For an æon, an æon of three-quarters of an hour, beset by every ghostly fear, you run stumbling through the blackness, like Tam o' Shanter with

witches and warlocks at your heels, imagining each bush to be a bear, and, after a fight that seems to last to all eternity, you see at last, in the far distance, the one beacon light in the drawing-room window, and you win the top of the drive. Down it you rush as fast as your legs can carry you, only to be met at the doorstep with "Oh, what a time you have taken! I thought you'd got lost or tumbled over the bridge or fallen into the dam. Come along in and get warm."

On hot days in August the white limestone seems to destroy every nerve in your eyes; you are blinded by the glare, and long for the sweet, green meadows of Dorset or Devon. The passing cars cover you with fine, white dust that gets into every crevice of your skin and chokes you if you open your mouth; the sun beats down upon your back, and the hill seems never-ending. You count your steps between lamp-post and lamp-post; you wish you had brought your bicycle, that you had left it at home, that you had never started, that you had not stopped to rest on the wall, that you had taken it easier, that you had rushed it. At last, panting and sweating, you fall rather than walk into the shadow of the drive, and all is forgotten in the ecstasy of being at home. But its moods are not all evil moods, though we are nervous of its moods at nine and twelve, at two and four, when the schoolchildren get in the way of the bicycle; at dawn and sunset, when the mill hands go to and return from work, and alternately please you with their winsome smiles and make you feel a fool with their well meant, but pungent chaff. Yet there are times when all the poetry of the world is in this road. When we have walked home on a still, moonlit, frosty night after a dance, where our Amaryllis or Neaera has smiled on us, we seem to be treading on air, and the road becomes a lover too. We can tell it all our secrets, full sure that it will never betray us; we can live over again those all too short honeyed hours, or it may be that the ecstasy is still more perfect. We may even be escorting our inamorata home down this self-same road. Then "what matter the weather, so we be together?" Only too swiftly then do the milestones and the hours pass. Whether it was wet or fine, beclouded or moonlit, we forget. Henceforth for us it is a *Via Sacra*.

Then there are the comings and goings—the joyous home-comings, when we are met at the station, after a year's absence, and all the old familiar faces beam to see us once again. We roll over the cobble-stones in the same old carriage which we thought must have fallen to pieces like the Deacon's shay. Each stone, each tree, each turn in the road, each yard of the hill brings back a fresh memory, revives some hidden longing which we had thought long since dead. At last the Rectory windows appear over the horizon, and waving handkerchiefs urge on our Pegasus, co-eval with the carriage, to one supreme effort. The villagers pass, bob, smirk, wave; we are at home again. In the days that follow we renew our associations with the dear road. Somehow it does not seem able to appreciate our uniform. "I could do with the new-fangled, devil engines, and I don't mind them flying things, for they don't concern me; but these last eighteen months 'as bin diff'rent, some'ow. I don't 'ear so much laughter-like. All t' faces as I see is drawn and 'arf-starved lookin' (my road always talks to me in a Derbyshire accent: I don't know why, but it does); all t' lasses are greetin' and all t' laads are gone. Summat's up, I can see, and I tell yer straight, I don't like it. Never no kissin' and 'uggin' nor nowt o' that; all marchin' in them 'ideos dust-coloured clotheses (not my idea of dust-coloured, mind yer: I'm a clean man mysen) and 'ere are you, followin' t' fashion, struttin' along bolt-upright—not like yer used ter do, sort o' 'arf listenin' for t' pixies and warlocks. Yer stuck up, lad, that's wot's wrong wi' yer, and yer look sort o' older and careworn. Ye'r onny a nipper for all yer goin' bald. Yer can't deceive me; yer look fit to greet yersen for all yer fine clothes. Come on, lad, what is it? What is it?"

In trembling, faltering accents, I tell my road what has befallen us through no fault of our own: somehow, having told him, a heavy burden falls off the back, I feel more than ever like Christian, his Hill of Difficulty overcome.

"Look'ee, my lad: I owes you summat for tellin' me that. Dost na know what I've done for thee all thy life long? Sithee then: this 'ere's wot you're doin' for me-like. I've made you and watched you all th' time sin' you were a wee lad, and now my life's in danger: you'd defend yer feyther and moother, wouldn't yer? Well, A'm yer feyther and moother and yer feyther's feyther and moother likewise. All the foochure 'appiness o' Hengland depends on th' like o' you. Eh, lad, but I'm proud o' you: be proud o' me—

Proud, then, clear-eyed and laffin', go to
Greet Death as a friend.

(Eh! I can read poetry, too!) Wherever you may go, lad, you'll take me with you like, and may be if ye die, over yer body another road 'll take its birth from your dust, and that road, fer all that it's furrin, will contain th' sperrit o' me. Chew on that, sonny; it's true, true as I'm 'ere."

So this is what patriotism means: if only our newspapers would leave us alone and not bully us so much, we might begin to understand if Nature would but speak. The days fly; again we stand at the drawing-room window and gaze over our mother's shoulder out on to the road, and wonder if that car brings a caller, if that obvious chimney-sweep is Father returning from the Archdeacon's meeting, if it would be too cold for a walk, whether we had better not wait for to-morrow because it will probably be warmer (or colder). Again we wander side by side sauntering Matlock-wards to shop... and, just as she did twenty years ago, my mother will turn to look every five yards to see if my father's bicycle is in sight yet: "he must have had a skid." Of course, he turns up, late as ever, and merrily we proceed. Just as heavily laden as in the old days we return an hour later, the bicycle more like Carter, Paterson's van than ever.

All too soon leave is up: the carriage is at the door; the last farewells are said. We crawl up the drive: all down the hill until only the top of the Rectory is visible. We wave in response to the chorus of napkins and handkerchiefs that seem to throng every window. We are left to our own thoughts... when the road for the last time obtrudes itself upon our vision: we can almost see its face and hear its voice. "Farewell, lad, and good luck to 'ee. Remember what I said: I'm non likely to forget 'ee, nor is Hengland neether; it's for me you goin' thro' all this: I'll non forget: I'll non forget."

CORRESPONDENCE.

"GEOGRAPHY EXAMINATIONS."

To the Editor of The Journal of Education.

SIR,—In your issue for November 1915, there is an article on "Geography Examinations," to which a reply is necessary. The difficulties of examiners are great and manifold and, speaking as an examiner, I would certainly not claim infallibility; yet I must protest against an article embodying direct mis-statements of fact and written by one who apparently does not realize the essential meaning of Geography. Without raising the question as to whether all the accusations are ill founded, I must controvert three statements which taken together seem to me to deprive the article of much of its claim to serious consideration.

1. The author writes: "The scope of geography... now comprehends ethnology, biology, zoology, geology, economics, history, astronomy, meteorology, and the rest.... What can the poor teacher do?" The obvious answer is that he can set himself to get the point of view of the subject he teaches, and to realize that geography does not comprehend all these subjects, but merely selects those particular portions of other sciences which aid in understanding the distribution of the most important phenomena of the Earth's surface and its inhabitants. As biology requires some knowledge of

chemistry and physics, so geography utilizes other sciences, and the *trained* geographer knows broadly what to select and what to reject: the border land of doubtful inclusion is relatively small and is becoming still smaller by general agreement among students of the science. That one who has not been trained in modern methods finds it impossible to make a selection and fails to understand the selection of those who have had the training is only an argument for the much needed improvement in the geographical equipment of educationists.

The author's inability to grasp the meaning both of the subject-matter and also of the questions, is illustrated by his criticism of the very useful question on climates (for which the writer of the present letter is in no way responsible) quoted from the recent July Oxford Senior Examination. He suggests that this question might with advantage be prepared for by memorizing a map showing isotherms and distribution of rainfall, and that "the task of stating reasons will be mere bluff." He fails to realize that there are certain broad types of climate depending on the position of areas, the learning of which would not be at all facilitated by the kind of memorizing he suggests. If the pupil has *understood* the types and their dependence upon position, he will be able to pick out those types from the examples given and also to furnish the reasons required. I can assure the writer that an examiner can and does distinguish between the pupils who have memorized and those who have understood—to the disadvantage of the former.

2. The statement that "the teacher must consult the pet theories and personal prejudices of the examiner" merely shows the writer's ignorance of how the papers are set. In a wide experience of the examinations in question, I can only think of a single case in which the paper is set by one examiner; in all the others there are from two to six examiners, and behind them revisers or moderators, while among the examiners themselves and on the part of the revisers the frankest criticism of the drafts of papers takes place; only exceedingly rarely could a pet theory or a personal prejudice survive under these conditions.

3. The statements that "in the Northern Universities Matriculation Examination for 1915 there is no physical geography except Question 1," and that "in the same examination for 1914 the first four questions are all on physical geography" are both incorrect. It has been the practice for several years to devote the first half of the questions, namely six out of twelve, to physical geography, and the *seeing eye* has no difficulty in realizing this. In support of this claim I enclose the copies of the four papers set in 1914 and 1915.

J. F. UNSTEAD.

SIMPLIFIED SPELLING: A LEAD FROM THE N.U.T.

To the Editor of The Journal of Education.

SIR,—There is much significance in the appeal made by the President of the National Union of Teachers for definite action by the Union in favour of spelling reform. He suggests that his Union petition the Board of Education for the recognition of at least an instalment of reform—"program" for "programme," "plow" for "plough," and the obliteration of the distinction between *-cede* and *-ceed*, *-ant* and *-ent*, *-or* and *-er*. Obviously these are half-measures which, while they might simplify the spelling lesson, leave untouched the more difficult problem of simplifying the reading lesson. But the important point is that not only would they, in themselves, save much time and effort, but that they would pave the way for further and more scientific reforms. The fact that they are made by the President of the largest teachers' organization in Britain entitles them to consideration. The problem of spelling reform is primarily the concern of the elementary teacher.

It is through the gateways of learning that change will come. Education is becoming more and more bureaucratic, and the man in the street more and more willing to take what he gets for his children at the hands of the Department. If the elementary teacher can open the gate to these and similar

reforms, no hostility on the part of the general public need be feared.

The Education Authorities of other lands have already pointed the way. As long ago as 1911 the Education Department of Victoria, Australia, issued instructions that all printed matter issued for or by the Department should be in accordance with certain enlightened rules, such as the omission of the useless *u* in "honour, favour," &c. The immediate cause of this departure was the receipt of the proceedings of the Imperial Educational Conference, which passed unanimously a resolution affirming the desirability of the simplification of our spelling, and inviting all parts of the Empire to take such steps as were possible to rid English spelling of its anomalies and absurdities. In America the cause of spelling reform languished until the National Education Association gave it an impetus by adopting twelve simplifications. These simplifications were "program, tho, altho, thoro, thorofare, thru, thruout, catalog, prolog, demagog, pedagog." Impressive is the fact that since then nearly a hundred Universities, colleges, and normal schools in the United States have either adopted some of the simplified forms of spelling in their official correspondence or they permit the use of simplified spelling by students in their written examinations.—Yours, &c.,

CHRISTINA JUST,
Secretary, Simplified Spelling Society.

THE UPLANDS ASSOCIATION AND A CONFESSION OF FAITH.

To the Editor of *The Journal of Education*.

SIR,—Your kindly reference to The Uplands Association in "Occasional Notes" for October leads us to ask your indulgence if we may correct you on one point. The members have no confession of faith. We are a society of students who, as a method of study, are trying to reduce our ideas to formulae. We have joined forces not necessarily because we hold similar views as to the lines along which reform in education should travel, but because as students we like similar methods of study. We wish to pursue our studies partly at our Summer Meeting, partly throughout the year by the agency of a *Circular*, the first issue of which we hope to forward to you in a few days.

We look upon the formulation of ideas in words as a valuable exercise, which, we think, helps to clear our minds. (It is no intention of ours to regard these "principles" as sacred tenets immune from revision, or from even more drastic treatment, should such be found necessary.) As obviously such an exercise cannot be conducted by all the members, although some of them, we expect, will contribute, through the columns of our *Circular* or otherwise, we have asked our Committee to spend what time they can in the search for appropriate forms of words.

To avoid misunderstanding we added a clause to make certain that no one would regard this harmless occupation as involving any of us in a charge of propaganda. You speak of the members as wishful "to convert everyone who comes within the sound of their voices." But, if you please, why assume that we wish to convert anybody? We are not agitators, but parents and teachers engaged in studying reform. Why should we worry to make converts and ask people to accept our conclusions? Such zeal would spoil the good-humour and sanity of our employment.

We will not trespass further on your space. Your criticisms of the terms we have employed as regards work in the open air and the place of "knowledge" in the curriculum will be attentively considered by our members. We need only add that, if any of your readers would care for further information about our work, printed matter will be forwarded on application.—We are, yours faithfully,

M. M. MILLS } Secretaries.
AMY F. PURVIS }

25 Andover Road, Southsea.
November 25, 1915.

THE Transatlantic Film Company announce the exhibition, at the Philharmonic Hall, Great Portland Street, of a marvellous submarine film—a moving picture of some hundred miles of the Atlantic Ocean bed, including *inter alia* a fight between a man and a shark. There will be a daily performance during the month at 2.30 and at 7.

GIFT BOOKS.

The Siege of Mr. Johnson. By H. LOUISA BEDFORD. (1s. 6d. S.P.C.K.)—Mr. Johnson is a retired college don, who lives a hermit's life in the country. The girl whom he had adopted and brought up as a daughter had eloped with a scoundrel who deserts her and leaves her penniless, but his heart is hardened, and he is deaf to all appeals. How he is besieged, and capitulates in the end to Con and Guy, who, with the true instinct of children, detect the kindly nature behind the gruff exterior, and lead the way to a reconciliation between the repentant ward and her guardian, is prettily and effectively told. The courtship and marriage of an old pupil to the boys' governess forms the underplot.

A Boy of Eirinn. By PADRAIC COLUM. (3s. 6d. net. Dent.)—This volume of "The Children of the Nations" introduces us to Finn O'Donnell, whose name serves as a peg whereon to hang something of Irish legend, folklore, and recent politics. Finn, as a gossoon, is driven by his uncle in a market-cart from his home in the wilds to Dublin. The way is long, and they take their time about it, picking up vagrants of all kinds and meeting with small adventures, some peculiar to Ireland; others, like the peep-show and the circus, common to all lands; and the story ends with an Irish play, the saga of *The Destruction of Du Derge's Hostel*, dramatized for boys to act. There is little of Irish wit and humour, but children will enjoy these plain tales from bog-land.

The Jolly Book of Boxcraft. By PATTEN BEARD. (3s. 6d. net. Harrap.)—An ideal gift book for the nursery, warranted to while away a dark or rainy hour of the Christmas holidays; but it is only fair to give a word of warning to godmothers and maiden aunts. They must beg boxes of every size and shape—pill, bonbon, boot, hat, bonnet, dress boxes—or there will be no peace in the house. There is a choice of 46 boxes.

The Blinded Soldiers' and Sailors' Gift Book. (3s. net. Jarrold.)—There is no need to invoke the proverb about a gift horse in order to recommend this work of charity. The very names of the contributors, authors, and artists should suffice to show that the purchaser will be twice blest and receive not a flap or token, but a handsome and substantial volume. We take at random a few of the names—Galsworthy, Eden Phillpotts, Anthony Hope, Sir Luke Fildes, Hugh Thomson. Again, *ad aperturam libri*, we light upon *In the Dark*, by Robert Hichens—his reflections as a special constable who has seen, at all hours of the night, in villas, bungalows, and cottages, lighted windows. Only a heart of stone could refuse such an appeal. All profits accruing from the sale will be handed over by the publishers to Mr. C. Arthur Pearson for St. Dunstan's, Regent's Park; there blinded soldiers and sailors are taught a trade or occupation.

Fairy Tales that Mother Told. (Nelson.)—"Mother" is anonymous, and all she lets us know about her *Tales* is that seven are from the French and eight from the German. All of them are as old as the hills, but children will never tire—*Cinderella*, *Tom Thumb*, and the classics of Perrault, Mme d'Aulnois, and Grimm. No one would venture to change Cinderella's name, but if Riquet and Rumpelstilzchen are retained there should be some indication of the meaning. The English, too, is capable of improvement—"she twisted her neck just as a cook does a barndoor fowl, . . . and nobody was particularly sorry for the same." There are six coloured illustrations. "The White Cat's Hunting Party" is effective.

John Williams, the Shipbuilder. By BASIL MATHEWS. Illustrated by ERNEST PRATER. (2s. net. Humphrey Milford.)—For those who know *Livingstone*, an earlier volume in the series by the same author and illustrator, it would suffice to say that in the less familiar *Apostle of the South Seas* they have done justice to a Christian hero and martyr no less bold and adventurous. "Aue, Viliamu, aue Tamu!" was the wail of his bereaved children, the Samoans; and the four missionary ships that bear his name were a response of English children to the cry.

Children's Sing-Song from Sweden. Music by ALICE TEGNER. English versions by MAISIE RADFORD. (1s. 6d. Augener.)—We hope this modest little song-book will have the success it richly deserves. With a few notable exceptions, the modern songs written for children are unsatisfactory; the music, if simple, relapses into the pretty-pretty, and the words are usually trivial and worthless. Here is a rare exception. These are true children's songs for the two-year-olds onwards. We know, for the children have told us so. Moreover, to show such charm and individuality through such simple means is an attainment effected only by the true artist.

Four Story-Books for Five- to Ten-Year-Olds.—Messrs. Nelson have published a set that would find favour for a nice little family of four. *Wee Tales for Wee Tots*, in large print, with bright pic-

tures, for the five-year-old; *My Big Picture-Book*, a sufficient advance to make the six-year-old sure it is for him; *The Chummy Book*, for the seven-year-old—who has, of course, had it for the last two years. Here we get to stories of soldier-games and such-like. We note two specially fresh and individual coloured pictures by E. Dorothy Rees. Lastly, *The Jolly Book*, for the grown-up ten-year-old, who can read real stories of the War, and at the same time has a mind free for Red Indians and Brownies. Will he notice, we wonder, that a happy choice has included among the stories a translation of Daudet's *La Dernière Classe*, which makes the book more than merely jolly?

Tangled Trails. By ARGYLL SAXBY. (2s. Wells, Gardner.)—In nowise dismayed by the wreck of the liner in which he is emigrating to Canada, Ben Coldstream gets astride an upturned boat, which he shares with a very peevish boy with whom he makes friends. After a while a man comes along on a hen-coop, also a survivor of the wreck, who turns out to be just the man to help Ben and his chum in their career. After this auspicious beginning, followed by the assistance of a friendly Indian chief, the emigrants prosper greatly, notwithstanding some unexpected contretemps.

Dickens Stories for Children. (Nelson.)—The stories are taken from *David Copperfield* and *The Old Curiosity Shop*. Peggotty and Barkis will delight all children no less than they have delighted their elders. So with Mrs. Jarley and her wax-work show. They will appreciate Little Em'ly and Little Nell, whose death they are judiciously spared, but we have doubts whether Mr. Murdstone, Mr. Creakle, and Quilp are meat for babes.

For Bonnie Prince Charlie. By ESCOTT LYNN. (Cassell.)—A story of the young Pretender, ending in the defeat at Culloden. The hero, a mere boy, gets involved in the rebellion, and shares in the hardships of the advance and retreat of the Prince's army, doomed from the first by the alternate weakness and over hopefulness of its leader. There are plenty of exciting incidents, imprisonments and escapes, and four good illustrations by Gordon Browne.

The Chartered Company. By HAROLD AVERY. (Nelson.)—An amusing school story. There is nothing tragic about it; the necessary misunderstandings and an occasional unjust accusation all have their comic side. The characters are lifelike, and we seem to know the boys, and like some of them; for the Relic we have a distinct affection, and feel that "Cailthorpe" could better have spared some more prominent member of the college. There are four coloured illustrations.

SAFE NOVELS.

Pointed Roofs Pilgrimage. By DOROTHY RICHARDSON. (6s. Duckworth.)

Mr. J. D. Beresford, who stands as sponsor, introduces Miss Richardson as the originator of a new form in fiction, "the first novelist who has become a very part of the human element she has described." All great writers of fiction have, to a greater or less degree, consciously or unconsciously, projected themselves into their characters from Shakespeare, the most objective of playwrights to Byron, who masqueraded under endless transparent dominoes, while Browning's semi-dramatic utterances may represent the common intermediate type. The peculiarity of *Pilgrimage* consists, not, as Mr. Beresford suggests, in the fusion of realism and romance, but in the delineation of a group of characters and their milieu by a series of snap-shots. In each photograph there is a looking-glass; the photographer sits to herself, but this is the only connecting link between the pictures. To drop the metaphor, the novelist seems to let her pen go and jot down each impression of the past that memory recalls. The plot, if such it may be called, may be told in a paragraph. Miriam is the daughter of well-to-do parents who have outrun the constable. She has long fretted at the conventionalities and humdrum of home life, and, in order to satisfy her love of adventure and at the same time to relieve the family burden, she accepts the post of governess *au pair* in a German boarding school. She stays there for a term, makes friends and foes, is generally approved but sometimes frowned upon by the Directrice, but the only incidents recorded are a thunderstorm and the dismissal of the French Mademoiselle. At the end of the half-year she returns home, whether voluntarily or under compulsion is left doubtful. Story there is none, but the interior of this Hanover Girls' School, its inmates, and their daily life is revealed as if by limelight. Almost to the end we expected the suave and sympathetic Fräulein Pfaff would prove another Mme Beck, the

Gemütlichkeit and *Schwärmerei* of the girls a veneer of German *Kultur*, and that Miriam would fly from Hanover as a plague-stricken city. We were agreeably disappointed. "I'd do anything to stay in Germany," are Miriam's parting words. The title gives promise of a continuation and we want to hear more of the heroine, a fascinating study in psychology who, in her *Wanderjahre*, repels more than she attracts.

The Extra Day. By ALGERNON BLACKWOOD. (6s. Macmillan.)

For those who have read *The Education of Uncle Paul* a more significant title would have been *Uncle Felix's Education*. It is a variation on the same theme, but by no means a replica, and in the alternative title we have suggested there is an intentional ambiguity. To the very end we cannot tell—nor, we fancy, could the author tell us—whether the Uncle is the educator or the educated. The protagonists of the romance are Uncle Felix, a middle-aged novelist, and Judy, Tim, and Maria, "just little children, just the usual age," but later on we discover that Maria, the youngest, is seven (she has been told that she is in her eighth year, and insists that she is eight). They are real children, with plenty of fun and good appetites, though they dream dreams and end by seeing visions; and each has a distinct character. Judy is the Ariel, Tim the Kobold, and Maria—well, Maria, in appearance a German doll with fat pink cheeks and big blue eyes, is the child of Wordsworth's Ode, incarnate. The mother is another Mrs. Shandy; Aunt Emily is the Categorical Imperative in petticoats; and the father, head of the Stationery Department, serves as a forerunner of the gospel, Fancy leading the way to Imagination. These are merely supernumeraries, who disappear from the scene when Uncle Felix enters and the drama proper begins. He is the Pied Piper who sets, not only the children, but all the household, down to the cook and butler, dancing at his heels, and the tune he plays is the "unexpressive nuptial song" of *Wonder*. All who have heard it—tramp, policeman, butler, and cook—go their several ways, as in Tennyson's *Sleeping Beauty*; but henceforth they all view earth, heaven, and sky with such different eyes. Time, that has stopped for twenty-four hours, goes on again. Mr. Blackwood combines an extraordinary sensitiveness to the subtler moods and aspects of Nature with a rare power of interpretation. At times, as when the tramp emerges from the tarpaulin a knight in shining armour, the contrast between the real and the ideal is too glaring, and at times he repeats himself; but it is a wonderful romance that we have read a second time—a high testimony from a reviewer.

COLONIAL AND FOREIGN NOTES.

UNITED STATES.

According to the American educators, it is the business of the school to keep the Temple of Janus closed, and they deplore its failure. The Declaration of Principles formulated by the National Education Association (of whose August meeting we wrote in due course) expounds that opinion. The virtual breakdown of civilization in Europe reveals, it is alleged, the ineffectiveness of the education on which we have been relying. "In an age marked by so great an expansion of educational activities, such great industrial and commercial progress, such wonderful discoveries and advances in the application of science, and such progress in advancing the social welfare, we see nations heretofore devoted to the arts of peace and the advancement of civilization almost at once lapse into a barbarism which a year ago we should not have believed possible. Not only have the systems of education of Europe proved disappointing at the time of supreme test, but we cannot console ourselves that the results would have been markedly different with us had the American nation become engaged in such a Titanic struggle."

We are minded to report rather than to traverse the contention of the American schoolmen; otherwise we might argue that in Britain there has been no breakdown of civilization—no lapse into barbarism to be charged against the schools; and that the true barbarism was of those who stood mute when Belgium was outraged. The National Education Association finds that all the mischief came of the fact that the school instils into the minds of the young an exaggerated Nationalism instead of inculcating the importance of international justice and international good will. Its Declaration makes the familiar recommendation that school histories should be rewritten. "The biologic, economic, and human waste of war should be emphasized, and the fact that war is the breakdown of law and order and civilized society should be made clear to the young." The

Declaration, further, (1) laments the present War, (2) reaffirms its approval of the American School Peace League, (3) deprecates any attempt to militarize the United States; (4) approves international associations, and (5) recommends the appointment of educational attachés to legations and embassies in foreign countries.

Observe that the Associates, deeming themselves neutral, were unconsciously rallying to the side of France. **Nationalism or Internationalism?** For France stands for Internationalism, and continually proclaims the rights of Humanity; Germany, at least since the days of Fichte and Turnvater Jahn, has been intensely nationalist. Jahn's *Deutsches Volkstum* will be found by those who examine it to contain the seeds of Pan-Germanism—an intense and dominant Nationalism. On these political themes we may not dwell. As to the school, it does best when it is furnishing the materials and methods for the formation of opinion, not hard and dry academic formulae. Let our children feel their way towards what is *Right*, indifferent whether the obligation to do it be based on Nationalism or Internationalism.

Ex America semper aliquid novi! How could initiative be quickened in backward school children?—that was the problem with which pedagogic minds at Cincinnati were occupied. The making and the flying of kites have always had a fascination for the young, and artful teachers arranged a contest on the common at Westwood, where competing kites should fly to gain honour for the victorious school. The boys built the kites in their several homes, consulting books and studying every type of sky-climber "from the kind of kite with which Benjamin Franklin is believed to have caught electricity to the great kites that Graham Bell is building at Baddock." A holiday was proclaimed and boys and girls assembled at the place of trial—*Visuri Aeneadas, pars et certare parati*. The first competition was in height, success being with him who flew his structure the highest in twenty minutes, and the prize, a simple blue ribbon, fell to one whose kite reached an elevation of thirteen hundred feet. Next the *pull* of the various kites was measured with a spring balance; eight pounds proved to be the draw that earned victory. Last and most exciting was the speed competition. Each boy had to unwind from the spool three hundred feet of cord, then to wind the whole length up again. But, mark you! the winding was accelerated by means of a curious hand-made instrument worked with a gear—the device of the boys themselves. It was Westwood School that gained the prize with thirty points, and the dull boys were found to have shown as much energy as the bright. Inventiveness, manual skill, physical activity, had been required of all, and something of true education had been got from what is usually accounted a mere childish sport.

The educational value of the kinema was foreseen by Horace: **Education by Kinema.** *Segnius irritant animos demissa per aures Quam quae sunt oculis subiecta fidelibus.* "Educational possibilities of the Motion Picture" is the title of an article in the *Educational Review* (L, 4). We ask children, says the writer, what mountains there are in Switzerland; they answer "The Alps." "What can you tell me about these mountains?" "They are covered with snow." The poverty of such teaching! What a difference if by "movies" we show glaciers on the Grindelwald, a trip from Lauterbrunnen to the station Eismeer, mountain-climbing in the Dolomites, an avalanche falling over a cliff! To the eyes of a pupil reading Shakespeare there might be submitted "Hamlet," "Othello," or "Lear," as performed by great actors. Suppose that children are studying the arguments of Columbus, his voyage, and the sort of land that he discovered. What realism could be got from moving pictures! But the producers of films need guidance. A committee appointed by the Bureau of Education should investigate the subject of cinematography and make recommendations in the interest of the school.

The Universities and Commerce. The Part Time Principle in Education was the theme of an address recently delivered before the Conference on Universities and Public Service at Boston. The underlying idea, it is well known, is that the student must receive both practical training under the actual conditions of life and instruction in theory from trained teachers. American Universities, to realize that idea in one domain, are extending a hand to Commerce. Thus, a plan is being worked out for the coming year between New York University and several large business firms in New York City, under which alternating periods will be spent in commercial offices and in the School of Commerce of the University. Again, the University of Cincinnati has been successful in giving late afternoon and evening courses to clerks and other persons in commercial employment. Not blind to their own interests, employers have shown great willingness to co-operate by releasing their employes. Germany has boasted that her *Kaufleute* are the best trained in the world. Commerce

is one of the fields in which she will have to be conquered, and the younger English Universities should consider in what measure they can help us to a decisive victory.

FRANCE.

Mr. Winston Churchill is not the only Minister to quit a Cabinet for a camp. From a list of promotions in the French Army we learn that M. Albert Sarraut, late Minister of Public Instruction and the Fine Arts, Sergeant of the 127th Territorial Regiment of Infantry, has been promoted *Sous-lieutenant* of Infantry (Territorial Army) for active service. So in democratic France a powerful Minister of State passes to a humble military grade—content in this way or in that to serve his country.

The Secondary Schools recovering. The general improvement in the situation that a year has produced is reflected in the secondary schools, as the figures relating to the *rentrée* of October show. Both in Paris and in the provinces school buildings occupied by the military authorities had been freed as others became available. Children of refugees had to be provided for; on the other hand, boys belonging to the class of 1917, expecting to be called out, did not return to school. Of the *lycées* of Paris the famous Louis-le-Grand received nearly 1,000 pupils, as also did Henri-IV; Charlemagne, about 900, and Saint-Louis, 800. In general the population of the *lycées* did not differ much from the normal, and in one or two cases there was overcrowding. Preliminary statistics obtained by the Ministry exhibit noteworthy progress for the year. Taking the figures for the whole of France on October 15, we find that in *lycées* for boys the numbers had risen from 41,631 to 50,316; in *collèges* for boys, from 20,498 to 23,902; in *lycées* and *collèges* for girls, from 21,901 to 29,693. In all, the increase was of nearly 20,000. In October 1914 the secondary-school population was found to have suffered a loss of 35,000; in October 1915 this loss had been reduced to 15,000—a significant and welcome change.

Effects of War. For the rest, the Spirit of War is still all-pervasive. Pedagogic journals open, for the most part, with pages of the Golden Book, or Roll of those engaged in education who have fallen or been wounded for their Country; they contain also goodly lists of teachers who have won distinction. The Ministry of Public Instruction and the Fine Arts undergoes a significant enlargement, there being added to it a "Direction des inventions intéressant la Défense nationale"—but only for the duration of the War. An article in the *Revue Universitaire* (XXIV, 9), headed "Impressions d'exil," draws aside the veil from the face of the invaded Departments. We are told how at Douai, for example, the *collège* courses were going on as usual—two hours in the morning, two in the afternoon—in spite of the obstacles interposed by the Herr Inspektor, thirty girls attending them regularly; how, since the boys' *lycée* had been requisitioned, its pupils were divided into two groups, the small boys going to the girls' school, the big distributed among various buildings; and how the *collège* courses just mentioned were given in four classes. "que Mme la directrice, le texte de la Convention de Genève en mains, a vaillamment disputées aux autorités ennemies." A school-mistress contending for the right to hold her classes—it is one of the minor heroisms, yet worthy enough of record.

QUEENSLAND.

Quarter-Money. The Queensland *Education Journal* (XXI, 7) makes a protest against the recent abolition of quarter-money in the schools. The money was needed to supplement the vote made for education by Parliament. Government does not supply wall pictures or charts, specimens, and apparatus for the efficient teaching of science; it makes no provision for the printing of "reports," absence notes, and circulars to parents, or for the posting of these. Again, teachers are expected to retail to their scholars the Queensland copy books and the School Paper, paying cash to the Government printer and getting paid as best they can. It is hoped that an adequate grant will be made for the full equipment of every school, and to relieve teachers of the obligation to raise money by means that would impose an unfair tax on their energy.

CAPE OF GOOD HOPE.

Economy. The Cape of Good Hope is among the States minded to retrench expenditure. Dealing with appointments of teachers in the new year the *Education Gazette* says that in view of the continued and impera-

tive necessity for rigid economy in administration, no increase of salary may be offered or granted; and it should be the aim of all School Boards in filling vacancies as far as possible to reduce the salary offered to the recognized minimum for the post, without regard to what the outgoing teacher has been paid. Further, the Education Department will control, even more stringently than in the past, the transfer of teachers, where this might mean an increase of expenditure at the cost of the efficiency of a school.

A Cookery Teachers' Course will begin on January 31. Only a strictly limited number of candidates will be accepted, who must hold the Third-Class Teachers' Certificate and be twenty-one years of age by the end of the year in which they take the examination. The fee for the year's course is £20. One exempting scholarship will be offered, the successful candidate being required to teach for two years in State-aided schools of the Province. Scholar in Cookery—it is a pleasant title.

EAST AFRICA.

Events may presently turn attention to East Africa. An "Imperial Conference Paper" recently issued provides information about a little known region.

The Land.

The 150,000 square miles of the Protectorate lie entirely under a tropical sun; yet few countries can show so great a variety of altitude, vegetation, and climate. The coast lands are fertile, yielding in great abundance rubber, cotton, and mangrove bark; moreover, with irrigation and the employment of capital, the banks of the Rivers Juba and Tana will be converted into highly productive cotton-fields. The low-lying belt inland from the coast is unhealthy, but is occupied for the sake of indigenous fibre and rubber. The heart of the country is a highland region with various products: European cereals thrive well and dairy-farming is carried on, whilst coffee-planting, especially around Nairobi, is a profitable industry. From the highland region the land descends towards Lake Victoria Nyanza, and here the natives are, for the most part, the cultivators of the soil, growing linseed, simsim, maize, and cotton.

The Portuguese, at the end of the fifteenth century, when Vasco da Gama arrived at Mombasa, were the first European settlers. Their domination was supplanted by that of the Arabs. Then from the

The People.

eighteenth century onward British warships would appear on the coast, protecting the commerce that sprang up with India and Europe, or suppressing the slave trade. The Anglo-German agreement of 1886 drew the border line between English and German spheres of influence, and nine years later the Imperial Government took over the control of the English area from the Company formed at first to develop it. Indians had been coming, to trade or in connexion with the building of a railway from Mombasa to Lake Victoria Nyanza. Again, the early days of the Protectorate saw a large influx of Boer settlers from South Africa—with a keen eye for the good high-lying pastoral land. And through all these historical changes Arabs maintained themselves in coast settlements, founded in remote times. So come, Europeans, Boers, Indians, Arabs dwell now amid native tribes: the Wa-nyika and the Wa-taita, the Wa-kamba, great warriors, and many others of whom time would fail us to tell.

The chief school for Europeans is at Nairobi, the capital. The Boers on the Uasin Gishu plateau have farm schools of the South African type. Schools for Indians have been established both at Nairobi

Education; the Schools.

and at Mombasa; a school for Arabs, at the latter town. The education of the natives, difficult by reason of stubborn traditions and tribal differences, is carried on mostly by the Missions, aided by the Government unless the instruction given be the purely literary. But the warlike Wa-kamba will hear nought of missionaries; and for them the Government is opening a large school in the Machakos district. Their bent is towards skilled labour.

All the schools are elementary, and all co-educational. The medium of instruction is English, alike in European and in Indian schools. But both Government and the Missions now apply a rule of beneficent effect—that when children know little or no English, the mother tongue shall be freely used for at least the first two years of instruction. No native child is allowed to learn English unless he intends to become an interpreter, a clerk, or a printer, or shows signs of unusual ability. This restriction is part of the general policy that is being adopted. The Protectorate is a new and purely agricultural country. It needs for its development men adapted to their special environment, and into such men children who have received a mere literary training will not grow. Nor would a large

class of English-speaking natives looking to the towns as centres of industry make for the welfare of the State. Reading, writing, and arithmetic, it is laid down, are to be taught in the schools as necessary instruments, not as ends in themselves. Health of body, strength of character, skill to deal with the actual surroundings—these are the fruits that education in East Africa must bear.

PRIZE COMPETITIONS.

The Translation Prize for December is awarded to "Holly." *Proxime accesserunt* "Yemen," "Agricola."

The winner of the Translation Prize for November is J. W. E. Pearce, Esq., Merton Court School, Sidcup, Kent.

"Wir sind am Ziel! hier setzt die Bahre hin,
In diesem Wäldchen ward ich todeswund,
Hier sah mein Aug' die stolzen Feinde fliehn,
Hier will ich sterben, hier auf diesem Grund.

Als wir hier fochten die Verzweigungsschlacht,
Da waren diese Erlen unbelaubt!
Nun ist hier grüne, duft'ge Maiennacht,
Und wie ein Dom wölbt sich's ob meinem Haupt.

Als wir hier fochten die Verzweigungsschlacht,
Da war der Feind ein furchtbar zahllos Heer;
Nun ist gebrochen seine stolze Macht,
Und seine Leichen liegen dicht umher.

Als wir hier fochten die Verzweigungsschlacht,
War zwischen Knechtschaft nur die Wahl und Tod;
Nun ist der Freiheit Feiertag erwacht,
Und blutig glüht, doch schön, sein Morgenroth.

Und ihr, geliebte Kinder um mich her,
Vernehmt nur eures Vaters Testament!
Der Athem stockt, die Zunge wird mir schwer,
Eis sind die Glieder, bis auf's Herz — das brennt!

Ihr, meine Söhne, sollt die Erben sein
Von diesem Blut, geflossen für mein Land;
Ich einer sterb', ihr zween füllt die Reihn,
Und stehen sollt ihr, wie eu'r Vater stand;

Und fallen, so wie euer Vater fiel,
Und fechten, bis ihr wund seid Glied bei Glied;
Nicht sollt ihr weichen von dem behren Ziel,
Bis eurer Heimath Schicksal sich entschied.

Noch lebt der alte Gott! — die Stimme bebt,
Es starb der Held! — Da weht's wie Blumenduft,
Da rauscht der Wald und durch die Erlen schwebt
Ein weisser Adler in die höchste Luft.

By the PRIZE EDITOR.

Set down the litter! We have reached the bourne.

Here in this wood my mortal wound I got;
Here with mine eyes I saw the proud foe turn;
Here would I die upon the very spot.

That winter day we fought the desperate fight,
Leafless and bare those alders round me spread;
Now as I breathe the balm of this May night
They weave a dome of verdure o'er my head.

That winter day we fought the desperate fight
'Gainst foes innumerable as the waves;
Now spent and shattered is their towering might,
And all around us lie the unnumbered graves.

For us who that day fought the desperate fight
There was no choice; 'twas death or slavery.
Now the first gleams of Freedom glad our sight,
And fair, though blood stained, glows the Eastern sky.

And ye, my children dear, who round me press,
Mark well your sire's last testament and will;
My breath is scant, my voice grows less and less,
My limbs are ice, my heart alone burns still.

Ye are my heirs, and in your veins there runs
The blood your father for our country shed.
This heritage I leave you, my two sons,
Stand in the gap and battle in my stead;

And fall as fell your sire, if heaven so will,
 Though stricken, wounded to the death, like me,
 Enduring to the end, pursuing till
 The goal is won, our land again is free.
 God lives, our fathers' God—The accents failed,
 The hero passed; a breath of flowers blew
 From out the rustling alders, and there sailed
 A snow-white eagle soaring to the blue.

By "HOLLY."

The goal is won! Set down the bier, 'tis right;
 Here in this copse, death's shaft will I await,
 Here, where mine eyes saw the proud foe in flight,
 Here will I die, here meet the stroke of fate.
 When we fought here the battle of Despair,
 These alders bare and leafless branches spread,
 Now in this night of May, fragrant and fair,
 A vaulted dome shows green above my head.
 When we fought here the battle of Despair,
 Then was the foe a host, countless and dread;
 Now is his proud might shattered everywhere,
 And thick around his warriors lie dead.
 When we fought here the battle of Despair,
 Then 'twas to be a slave or face death's doom:
 Now Freedom's festal day awakes, and fair,
 Though red with blood, its dawn breaks on the gloom.
 And you, dear children, this my testament,
 Your father bids you take now in his name:
 My lips scarce move, my breath is well-nigh spent,
 My limbs are ice, my heart alone is flame.
 You, my dear sons, are heirs by this my will
 Of blood shed for my own dear Fatherland:
 I die—but *one*—you *two* the ranks shall fill,
 And as your father stood so you shall stand;
 And fall as fell your father, flinching not,
 And fight till strength shall fail you, wounded sore,
 Nor waver in your holy task one jot
 Till your land's free, or sinks for evermore!
 God still lives as of old—His voice has failed.
 The Hero dies! A breath of flowers sweet
 Came, and a rustling through the trees, there sailed
 An eagle white towards Heaven on pinions fleet.

We classify the fifty-two versions received as follows:—

First Class.—Agricola, Holly, Pro Patria, D.S.C., Yemen, Dora.

Second Class.—H.K., Santa Barbara, Try Again, C. Berkeley Margetts, Schattenlos, Desdichado, Senior, Pax, W. M. Gillard, Chislehurst, Valkyrie.

Third Class.—M.S.W., H.B.K., Noël, K.A.W., M.J.R., Clytie, Hoffnung, Y.M.N., Chris, Tityrus.

Fourth Class.—Medehamstead, E.D., Bethöe Angliae, Musica, Brünhilde, C.D.S., Wattle, Jane, Colly, Sona, Ulrich, Hilda, A.R.O., N.C., Trenches.

Fifth Class.—M.Y., Chart, Undine, A.B.A., S.V., Nil., P.S.A., Lis, Twabla, U.V., Dumdum, Wil.

The German lyric needs little comment. Zedlitz had himself fought in the campaign of 1809, but he was a man of letters, not a patriot, and his lines have not the true ring of Arndt's or Körner's. A prose version could not aspire above a third class. *Bahre* must be a litter, not a bier. *Grüne* is hard to express, and the epithet had best be transferred to the next line. "Canopy," "aisle," "arch" are all inadequate for *Dom*, and miss the dim religious light of a cathedral. So "his corpses strew the ground" will not stand. It is "the grassy barrows of the dead," or rather the hillocks that mark their graves, that he sees. *Nocht lebt der alte Gott*. Pippa's "God's in his heaven" might serve.

A Prize of Two Guineas is offered for the best translation of the following passage from Victor Hugo's "France et Belgique":—

Une heure après, toujours par le sentier tortueux de la falaise, j'approchais du Bourg-d'Ault, but principal de ma course. A un détour du sentier, je me suis trouvé tout à coup dans un champ de blé situé sur le haut de la falaise et qu'on achevait de moissonner.

Comme les fleurs d'avril sont venues en juin cette année, les épis de juillet se coupent en septembre. Mais mon champ était délicieux, tout petit, tout étroit, tout escarpé, bordé de haies et portant à son sommet l'océan. Te figures-tu cela? vingt perches de terre pour base, et l'océan posé dessus. Au rez-de-chaussée des faucheurs, des glaneuses, de bons paysans tranquilles occupés à engerber leur blé, au premier étage la mer, et tout en haut, sur le toit, une douzaine de bateaux pêcheurs à l'ancre et jetant leurs filets. Je n'ai jamais vu de jeu de la perspective qui fût plus étrange. Les gerbes faites étaient posées debout sur le sol, si bien que pour le regard leur tête blonde entraînait dans le bleu de la mer. A la ligne extrême du champ une pauvre vache insouciant se dessinait paisiblement sur ce fond magnifique. Tout cela était serein et doux, cette églogue faisait bon ménage avec cette épopée. Rien de plus frappant, à mon sens, rien de plus philosophique que ces sillons sous ces vagues, que ces gerbes sous ces navires, que cette moisson sous cette pêche. Hasard singulier qui superposait les uns aux autres, pour faire rêver le passant, les laboureurs de la terre et les laboureurs de l'eau.

Au sortir de ce champ, la scène changeait encore. Le ravin où je marchais se fermait d'un côté, se déchirait brusquement de l'autre, et je ne voyais plus que la terre, la riche terre de Normandie, les plaines à perte de vue que termine un liseré violet, et au loin les têtes rondes des pommiers. Car c'est encore là une de ces harmonies qu'on rencontre partout à chaque pas, le pommier est une pomme. La forme du poirier s'allonge un peu.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners will be required to send real names for publication.

All competitions must reach the Office by January 15, addressed "Prize Editor," THE JOURNAL OF EDUCATION, 3 Broadway, Ludgate Hill, E.C.

Those in the First Class are entitled on application to a copy of "Essays, Mock Essays, and Character Sketches."

Translations sent with an addressed and stamped envelope and six penny postage stamps will be returned corrected. Foreign postage stamps are not accepted.

Translations will not be returned unless both these conditions are complied with.

NORTHAMPTON POLYTECHNIC INSTITUTE.—Prize Distribution took place on December 18. The Principal's Report this year was of special interest as showing how the War had changed, but by no means abated, the work of a great London Polytechnic. At the end of the present session, when enrolments were made up, it was found that in the total number of students there had been a decrease of some 350 (1,748 against 2,101). The day classes of the Engineering Day College began with a record entry, but so many students in the second, third, and fourth year classes either obtained commissions or engagements in other urgent war work that one of the sections ceased to exist, and the others were greatly reduced. In the evening classes the effects of the War were more apparent, the decrease in numbers due to this cause is estimated at 25 per cent., and the average number of hours worked by each student fell from seventy to forty-eight. Against this is to be set the fact that the Principal was able to place without payment of premiums the whole of the second and third year engineering students in commercial workshops, and that the technical optics classes have again received substantial support from the Optical Society, and form a nucleus for supplying a serious national defect that the War has revealed. The number of students who have obtained the certificate of the St. John's Ambulance Association has trebled, and many of them are now on active service or helping the hospitals after working hours. The Roll of Distinction shows a total of 367 who have joined the colours, including 22 members of the staff. Over 50 have obtained commissions, 7 have fallen, and 6 have been wounded. Courses in field telegraphy, range finding, and map reading for drafts from the artillery divisions of the New Armies were established in May, and 897 men have already passed through these courses. The actual manufacture of munitions has been carried on by trained students since July in the workshops of the Polytechnic, and the staff has been employed in experimental work for the Government. All this labour of brain and hand has been given without charge, except for out-of-pocket expenses. The Principal might justly boast that the "Northampton" has "done its bit."

PATRIOTISM IN SCHOOL

MILLS & BOON'S NEW BOOKS.

MILLS & BOON will be happy to receive applications for Specimens from Heads of Schools and Teachers of special subjects. New Educational Catalogues sent post free.

ENGLISH GRAMMAR, WITH ANALYSIS AND PARSING.

By H. G. SMITH, B.A., Senior English Master, King Edward's School, Camp Hill, Birmingham; and G. H. BALL, M.A., Head Master, King Edward's School, Camp Hill. 1s. 6d.

ENGLISH COMPOSITION, INCLUDING PRÉCIS AND PARAPHRASE.

By H. G. SMITH, B.A., and G. H. BALL, M.A. 1s.

These books have been written with a view to providing a course in English Grammar and Composition suitable for use in secondary schools. They aim at explaining the fundamental rules of the language and making clear the difficulties which teachers of Latin and French experience in imparting a knowledge of their subjects to young boys.

The above two books are issued in one volume entitled "English Grammar and Composition," and form a three years' course in English. 2s.

POETRY FOR BOYS.

By STANLEY MAXWELL, M.A. 1s. 6d.

A collection of poems of established literary merit printed in bold type.

"Such is the superiority of Mr. Maxwell's collection over every other similar kind of work we are acquainted with that not the least apology is due for its appearance. The selections have been made with a fine discernment of what will appeal to the interest of boys."—*Secondary Education*.

THE MERCHANT OF VENICE.

With revised Text, Questions, Notes, and Appendixes. By G. H. BALL, M.A., and H. G. SMITH, B.A. 1s. Text only, 6d. net.

"The chief feature of this edition is the series of appendixes which is admirably contrived. Notes, suggestions for character study, and essay writing thereon, short expositions of all outstanding features of interest, and a set of examination papers, old and new, are provided, and are of invaluable help to the earnest student. The text is in good plain type."—*Times*.

SHAKESPEARE'S KING HENRY V.

Edited by the Rev. C. R. GILBERT, M.A. 1s. Text only, 6d. net.

"Differs from the usual school editions in that all the helps are placed in the book after the text. These helps are of a thoroughly useful and workmanlike matter."—*Educational News*.

FRANCIS CHANTREY: DONKEY BOY AND SCULPTOR.

By HAROLD ARMITAGE. Illustrated. 1s.

A wholly delightful reader for pupils of 10 to 12.

EXERCISES IN FRENCH FREE COMPOSITION FOR UPPER CLASSES.

By R. R. N. BARON, M.A., French Master, Cheltenham Grammar School. 185 Exercises. Fourth Edition. 1s. 6d.

A REFORM FIRST FRENCH BOOK.

Especially written for the use of Adult Students. By J. STUART WALTERS, D. ès L. Illustrated. 1s.

DIRECT METHOD FRENCH TEXTS

Edited by R. R. N. BARON, M.A.

TAMANGO and JOSÉ MARIA LE BRIQAND. By PROSPER MÉRIMÉE. Second Edition. 1s.

TAMANGO alone, 4d. net. (Set Book for the Middle Grade Irish Intermediate Examination, 1916.)

PIERRILLE. By JULES CLARETIE. Second Edition. 1s. 6d.

BUG JARQAL. By VICTOR HUGO. 2s.

LA BELLE NIVERNAISE. By ALPHONSE DAUDET. Second Edition. 1s. 6d.

TRISTAPATTE ET GORET, ET AUTRE CONTES. 1s.

AN INTRODUCTION TO HEAT.

By ARTHUR R. LAWS, B.Sc., and GEORGE W. TODD, B.A., D.Sc., Science Masters at the Royal Grammar School, Newcastle-on-Tyne. With 106 diagrams. 2s. 6d.

The main idea underlying it is that boys are gifted with a large amount of curiosity, and that when they once realize that there is something behind many of the phenomena of everyday life they are prepared to take a good deal of trouble to satisfy their inquisitive instincts.

OUTLINES OF APPLIED PHYSICS.

By H. STANLEY, B.Sc., Lecturer in the Merchant Venturers' Technical College, Bristol. With 75 Diagrams. 2s. 6d.

"In the main a series of examples in theoretical physics, for not only are there numerous numerical exercises at the end of each chapter, but more than four hundred of a miscellaneous character at the end of the book. The book will probably be found quite useful."—*Nature*.

FIRST SCHOOL BOTANY.

By E. M. GODDARD, B.Sc., Science Mistress, Girls' Secondary School, Colchester. Second Edition. With 207 Diagrams. Crown 8vo, 2s. 6d.

"An excellent combination of practical exercises and clear explanations, illustrated by good bold outline drawings. The pupil who works conscientiously through the physiological experiments, and laboratory and field observations described in this small volume, will have won something better than examination successes."—*Nature*.

The book covers the syllabus of the Oxford and Cambridge Junior Local Examinations.

NOTES ON THE GOSPEL ACCORDING TO ST. MATTHEW.

With Questions and Concordance for the Use of Schools. By the Rev. C. R. GILBERT, M.A. With 3 Maps and an Illustration. Crown 8vo. 1s.

EXAMPLES AND TEST PAPERS IN ALGEBRA.

By W. J. WALKER, M.A., Head Master of Woodhouse Grove School, Apperley Bridge, Bradford. With or without Answers, 2s. 6d.; and in two volumes each 1s. 6d. with Answers, or 1s. 3d. without Answers.

"There are plenty of mental or oral questions and test papers. The type is large, and most left-hand pages begin with a new exercise. The examples are for the most part original, and are carefully arranged."—*Mathematical Gazette*.

PREPARATORY ARITHMETIC.

By F. C. BOON, B.A., Principal Mathematical Master at Dulwich College. Second Edition. With Answers, 1s. 6d.; without Answers, 1s. Answers separately, 6d. net.

A revised and enlarged edition of this well known book. A large number of new examples have been added, and the few misprints in the first edition corrected.

A FIRST SCHOOL CHEMISTRY.

By F. M. OLDHAM, B.A., Senior Science Master at Dulwich College. With 71 Illustrations. Fifth Edition. 2s. 6d.

GRAPHS IN ARITHMETIC, ALGEBRA, AND TRIGONOMETRY.

By W. J. STAINER, B.A., Head Master of the Municipal Secondary School, Brighton. With 120 Diagrams. 2s. 6d.

LATIN EXTRACTS FOR SIGHT TRANSLATION.

With Hints to Beginners. By G. H. BALL, M.A., Head Master of King Edward's School, Camp Hill, Birmingham. 1s.

THE NEW PRELIMINARY GEOGRAPHY.

By H. B. WETHERILL, M.A., Head Master of Allahabad High School. Fourth Edition revised to September, 1915. With Illustrations and 19 Diagrams. 1s. 6d.

**THE
BERGMAN ÖSTERBERG
PHYSICAL TRAINING COLLEGE,
DARTFORD HEATH, KENT.**

Trustees:

Sir GEORGE NEWMAN, M.D. (Chairman).
Major WALDORF ASTOR, M.P.
Dr. CHRISTOPHER ADDISON, M.P.
Lord SHAW OF DUNFERMLINE.
The Marchioness of SALISBURY.

Principal:

Miss M. H. MEADE, B.A. (Moral Sciences Tripos).

Vice-Principal:

Miss A. WIKNER (Royal Cent. Inst. of Gymnastics, Stockholm).

The College was opened in 1885, and was the first of its kind in England. Students are prepared to be teachers of Scientific Physical Education on Ling's Swedish System. The Course extends over two years. It includes the study of Anatomy, Physiology, Theory of Education; the Theory and Practice of Gymnastics, Massage and Medical Gymnastics, Dancing and Outdoor Games. Students practise teaching in schools in the neighbourhood. The College stands in its own ground of 15 acres, in a beautiful and healthy locality close to Dartford Heath.

The demand for mistresses of physical training holding the Diploma of this College is at present far in excess of the supply.

The course begins in September. Further particulars may be obtained on application to the SECRETARY.

**BERGMAN ÖSTERBERG
UNION OF TRAINED GYMNASTIC TEACHERS.**

Ling's Swedish System.

Aim of the Union: To advance the cause of Physical Education on scientific lines.

In placing members of this Union as Teachers in Schools, careful and discriminating choice is exercised, and the exact requirements of each School specially considered.—PHYSICAL TRAINING COLLEGE, DARTFORD HEATH, KENT.

The Institute also holds Examinations for Elementary School Teachers' Certificate for Physical Training.

Students are Trained as Teachers and for the Institute's Examinations.

Full particulars of the Examinations, &c., may be obtained from the Hon. Secretary, Mr. T. WILLIAMS.

Principals of Schools and Colleges requiring Trained and Certificated Teachers of Drill, Gymnastics, &c., or Fencing, should apply to the Hon. Secretary.

**TO GIRLS SEEKING A USEFUL AND
ATTRACTIVE CALLING.**

ANSTEY COLLEGE FOR PHYSICAL TRAINING AND HYGIENE. **ERDINGTON, WARWICKSHIRE**, offers a full Teachers' training in Physical Culture, including Swedish Educational and Medical Gymnastics, Dancing in all its branches, indoor and outdoor Games, Swimming, Hygiene, Anatomy, Physiology, &c.

Good Posts obtained after Training.

PORTLAND ROAD GYM-

NASIUM, London, W.—Students thoroughly trained for Public Examinations. Duration of Course, 2 to 3 years. All branches of Physical Work. English and Swedish Gymnastics, Hygienic Exercises, Dancing, and Remedial Work.—Miss TOLLENACHE, Member and Examiner of the British College of Physical Education, M.G.T.I., 113 Mount Street, Grosvenor Square, W.

TYPEWRITING.

THE Editor can recommend from personal trial a blind typist. For terms apply to E. G. EAGLE, 189 Higham Hill Road, Waltham-stow.

SOUTHPORT PHYSICAL TRAINING COLLEGE.

Beautifully situated near the Sea in healthy surroundings.

President:

Admiral Lord CHARLES BERESFORD, K.C.B., M.P.

Principals:

A. ALEXANDER, F.R.G.S.; Mrs. ALEXANDER.

The Staff consists of Medical Lecturers and experienced teachers in every branch of Physical Training, including a Swedish Mistress from the Royal Gymnastic Institute, Stockholm.

GIRLS of good education are trained as scientific teachers of Physical Training to qualify them for appointments as Gymnastics, Games, and Health Mistresses in schools and colleges. The course, extending over two years, includes:—Physiology, Anatomy, School Hygiene, First Aid and Sick Nursing, Remedial Exercises and Massage, Swedish Educational Gymnastics (Ling's System), Outdoor Games (Hockey, Net-Ball, Cricket, Tennis, Badminton, &c.), Dancing (including Old English and Morris Dances), Swimming and Rowing, Organized Recreative Games for School and Play-Ground.

Diplomas and Gold Medals are awarded to successful students.

The demand for capable teachers of Physical Training is steadily increasing, and students of this College frequently obtain appointments before completing their training.

HEALTH STUDENTS.

Cases of spinal curvature or general physical weakness are received in residence, and treated under medical supervision.

GEORGE GILL & SONS, Ltd.

Before selecting Textbooks, write for particulars or specimen copies of books prescribed for the Examinations contained in

The Oxford and Cambridge Edition.

The Senate Edition.

General Editor of the Series:
REGINALD G. GILL, B.A. (Cantab.), Barrister-at-Law.

FOR EXAMINATION PREPARATION.
QUESTIONS AND ANSWERS ON SHAKESPEARE'S

**CORIOLANUS,
MERCHANT OF VENICE,
JULIUS CAESAR.**

Each play is treated in the form of **Question and Answer**. Each play contains an **Introduction** by Canon AUGUSTUS JESSOPP, D.D., and an **Appendix** comprising a translation of the Commentary on that play by Prof. G. G. GERVINUS.

The Senate Edition of Shakespeare may be used with any standard text. No other Notes are required. Notes and Text may be open simultaneously each vol. **1s.**

Other books will be issued as required for the Examinations.

A NEW READER FOR JUNIOR FORMS.

The Senate Edition. **GREEK AND ROMAN GODS AND HEROES.**

By P. C. SANDS, M.A., late Fellow of St. John's College, Cambridge. The aim of the writer is to introduce to pupils of 12 to 14 years of age the Stories of the Greek and Roman Gods and Heroes, and some account of Greek and Roman beliefs, and so not only to bring them into contact with a most beautiful series of legends but to enable them to understand allusions to classical lore in their later reading. With 8 full-page reproductions of world-renowned pictures and numerous other illustrations. Cr.8vo, cl., **10d.**

The Oxford and Cambridge Edition.

The Epistle to the Galatians. Edited by Rev. F. MARSHALL, M.A. With full comments on the Revised Version, Examination Questions for Senior Candidates **1 0**

The Oxford and Cambridge Edition.

Shakespeare's Much Ado About Nothing. Edited by Rev. F. MARSHALL, M.A., and R. G. GILL, B.A. With Notes on Paraphrase, Versification with full examples, Character Sketches, and Examination Questions **1 6**

The Senate Edition.

"La Guerre," Vol. II. A French Reader, compiled from articles upon the European War selected from the leading French Newspapers. With Notes on Idiomatic Sentences by TAYLOR DYSON, M.A. **10d.**

The subject matter of this Reader from its retaining interest, leads the student unconsciously to a better knowledge of modern French construction. Many of the articles are of a conversational nature, and of the greatest value as supplying a means of acquiring a fuller vocabulary and a better knowledge of the subtleties of the language. Volume I is in use at all the great Public Schools.

The opening up of a NEW CONNEXION is very desirable.

If particulars of YOUR SCHOOL are included in the next issue of

PATON'S LIST of SCHOOLS and TUTORS

they will be seen by many thousands of Parents, not only in this country, but all over the world.

THIS BOOK secures for its advertisers a far larger proportion of *definite results* than any other publication of its kind.

"The majority of my boys come, of course, from personal recommendation, but I may say that of those who come as a result of advertising, practically all have heard of the school through your List of Schools."

"I advertise in your book because I have found it of great use to me, and the best possible way of making my School known."

"I consider that your book fills an awkward gap, especially in cases where Schools do not go in for general advertising."

The NINETEENTH Annual issue is now being prepared for Press.

SPECIMEN COPY, with full particulars and proof of value to clients, will be forwarded to Head Masters or Head Mistresses on application to

J. & J. PATON, Educational Agents,
143 CANNON STREET, LONDON, E.C.

Telephone, Central 5053.

OCCASIONAL NOTES.

OF the Conference week in 1916 we might well repeat what we wrote last February of the Conferences in 1915. There was but a slight falling off in the number of associations represented, and none in the attendance. Though the shadow of the War hung over all, yet there was no sign of lassitude or depression; no self-glorification, but a frank acknowledgment of our defects, and a stern resolve that our children shall be the last to suffer, and that, as far as in us lies, they shall be better trained and taught than their sires. There was, indeed, a demand for more practical education to meet the needs of modern life, but there was no less insistence on the necessity of a sound foundation, and a protest against the utilitarianism that looks on the humanities as an idle luxury. Teachers showed that they themselves were ready for self-sacrifice, and that, in insisting that salaries should not be lowered or the numbers in classes increased, they were concerned more for the efficiency of the teaching and the good of their scholars than for their own pockets and comfort. One serious defect remained. Primary teachers, as such, are not represented at the Imperial Institute. The great Head Masters sat apart this Christmas "on a hill retired," and again as members of the Lower House at the Guildhall, and the Head Mistresses hold their annual meeting in the summer. It should not be beyond the powers of the Registration Council to devise some remedy for this dissipation of energy.

The January Conferences.

ONE of the most striking features of the January meetings was the small part taken in the discussions by school teachers. So far as we heard, the debates were carried on principally by professors, officials, and a variety of distinguished laymen. We do not wish to depreciate the value of meetings of this kind. It is, no doubt, a great advantage to teachers to hear papers on various branches of the curriculum by those who are masters of their subjects. Such discourses freshen up minds which have perhaps grown a little dull in the atmosphere of the classroom, help to correct false ideas, and open up vistas of new information. Teachers have every reason to be grateful to the professors and others who are willing to talk to them. Yet we are surprised that schoolmasters and mistresses are content to listen, for the most part, in silence. For the professors are continually raising questions which only teachers can settle. Whether geography and history should be taught in the lower forms by the same person or by two specialists, whether Aristotle's "Ethics" forms a good basis for the discussion of moral questions with a class, how much military and naval history can be taught to boys, whether teachers should have any voice in the selection of children for special schools—these are a few examples of the questions raised, which seem to us essentially questions for the working schoolmaster and mistress.

WE are not surprised that the Board of Education have declared the Circular on Examinations to be for the present in abeyance, in so far as the proposals involve expenditure by the Board. The one point on which all the critics of the scheme were agreed was that the entire cost of the examinations should be borne by the Treasury; but, even if they had confined their demand to one-half, the result would have been the same, proposals for additional expenditure being ruled out of court. The discussion of the Circular, however, has not been in vain. A substantial agreement with the University Examining Bodies has been reached. Ten out of the seventeen professional bodies approached have consented to accept the proposed First Examination as the equivalent of their entrance examinations. The Board, on their part, have consented to modify the draft scheme. The first examination is not to be obligatory on all grant-aided schools. Group IV subjects (Handicrafts, &c.) are to be included experimentally, and a substantial representation of secondary-school teachers on the Advisory Committee is guaranteed. They further commend to the good offices of all whom it may concern the proposal for limiting external examinations to the two to be taken at sixteen and eighteen and for making the first examination a test of a general education, and the second a test of specialized knowledge.

THE influence of the Board is apparent in the new proposals for the Oxford and Cambridge Local Examinations. The subjects for the Senior Examination are arranged in groups, and candidates will be required to offer a selection representative of various branches of study. Group IV subjects are recognized as examinable possibilities, except Handicraft, which is still left out in the cold. Further, Oxford will, in doubtful cases, take the candidate's school record into consideration, and will allow schools to offer other subjects as alternative to

The Fate of Circular 849.

The "Locals."

those in the list, though at an extra fee, whilst Cambridge proposes to issue to candidates who have been three years at an approved school certificates stating the fact. Both Universities are instituting a High School Examination designed for boys and girls of eighteen years of age. The Cambridge program is not yet ready. With the Oxford scheme, just published, we shall deal next month.

DR. MERCIER, in a letter to *The Times*, discusses the relation of science to education as concerned with character, clear thinking, and knowledge of facts.

**Dr. Mercier on
Scientific
Education.**

For the first, and most important, science is of no particular value; for the second, methods of teaching are more important than the subjects taught, and he would prefer a man taught Latin and Greek on a good system to one taught chemistry and biology on a bad one. As to facts, "the superiority of science is indisputable and immense, but this is the least important part of education." What is really wanted is not so much knowledge of science as scientific knowledge—that is, knowledge which is clear, accurate, and systematic, and this may or may not be the result of the teaching of science. We welcome this protest by a distinguished physician against the aggressive demands of the scientists. We need, indeed, more science in our schools, both for its own sake and as an equipment for life; but science must know her place—not first, but second.

ON the importance of training in language Dr. Mercier speaks strongly. Clear thinking and accuracy in the use of language go together; the neglect of the

Language.

mother tongue is one of the greatest defects in our schools. What is wanted, as we have constantly urged, is that every boy and girl should be taught, at least, to write clear and straightforward English, to describe or narrate what he knows both fully and concisely, to tell a plain tale in plain language; and the fault is that this is supposed to be the business of one particular teacher, called a teacher of English, whereas it is really part of the business of every teacher.

THE *Times* advocate of universal secondary schooling has returned to the charge, without, however, adding much to what he said before. He wants to see

**Universal
Secondary
Education.**

schools divided into Preparatory, for all up to eleven, and manned by the present elementary teachers; and Secondary, for all from eleven to sixteen (the lowest leaving age being fifteen), and manned by "secondary-trained" teachers. This would mean taking the tops off the present primary schools and attaching them to the lower secondary schools. It is a scheme for and against which much may be said, but the weakness of it is that it does not go to the root of the problem. It does not face the fact that, after what we may call the stage of the three R's, ending at eleven, is passed, the question arises, What kind of education is best suited to each child? The education now given in secondary schools is not the only possible kind, and all children are not adapted for it. Many are more suited for industrial training, or agricultural, or commercial, and for these, schools giving such kinds of training, in conjunction with some general education, are required. Such schools are now being established in many places. The problem for the

teacher and administrator is to fix the age at which boys and girls should be drafted into these varied schools, and, what is still more difficult, to discover, in consultation with the parents, to which each child is to be sent. Possibly the writer includes all these forms of training under the term "secondary," but there is no hint of it in his article. His idea of the difference between elementary and secondary education is that the one is "the heaping up of knowledge as an external possession," the other "the assimilation of knowledge as part of the personality." With such a crude view we do not feel called upon to deal.

THERE is, however, just a hint of the truth in the above crude view, and that hint is contained in the word "personality." At secondary schools, speaking

**The Child as an
Individual.**

broadly, the child is a personality, and is taught and treated as such; at elementary schools, again speaking broadly, he is treated far too much as an item in a mass. This has nothing to do with the outlook and ideals of elementary and secondary teachers; it is due simply to the fact of the overwhelming size of the classes in the primary schools. Thirty children in a schoolroom are thirty separate individuals: sixty are a mass. The discussions at the January meetings did much to confirm the view, which we have always held, that the first objective of educational reformers should be the reduction in the size of the classes. Dr. Abelson, for instance, pointed out that many children of a low grade of intelligence do quite well in special schools, where they can be treated by methods appropriate to childhood. The success of the boy scout, girl guide, and similar movements, of which the Moral Education League heard so much, is due largely to the scope they give for the play of individual character. Or consider, again, the success of the Little Commonwealth. That remarkable experiment has won high praise, which it fully deserves; but it has not been sufficiently observed that there are five or six adults in the settlement looking after about forty children. Such a scale of staffing would revolutionize our elementary schools, but we fear that it is hardly practicable. Nevertheless, it is well that we should have the Little Commonwealth in our midst, as a standing object-lesson in the need for treating children as individual human beings, each with his or her separate impulses, abilities, and desires.

AN object-lesson in bureaucratic pedantry has been furnished by the Welsh Department of the Board of Education. Friars' School, Bangor, is an old endowed

**Bureaucratic
Pedantry.**

grammar school; the majority of the pupils are monoglot English boys; and the languages taught are Latin, Greek, and French. Provision is made for teaching Welsh to those who desire it, but the Head Master declares that there is no demand. But the Department have their regulation: "In districts where Welsh is spoken the language, or one of the languages other than English, should be Welsh," and it objects to the rule obtaining at the Friars' School that Welsh is taught only if it is asked for by the parent. In other words, it demands that Welsh shall be forced upon those who do not want it. Whether it is to be forced upon the whole school or upon only a portion of it is not clear; perhaps it does not much matter to the Department; their point apparently is that it must be taught to somebody. French and Welsh are at present alternatives at the school; everybody chooses French, so

that to satisfy the Authority some boys will have to give up French, which they want, and learn Welsh, which they do not want. The feeling at the meeting of the Bangor Local Governing Body, which discussed the subject, was quite clear; they were anxious that boys should have the opportunity of learning Welsh, but further they were not inclined to go. Quite rightly, as we think; why should English boys be compelled to learn Welsh merely because they live in Wales?

BODIES of teachers have been unanimous in condemning the false economy of the London Education Council. Not the least remarkable of the protests is the resolution carried almost unanimously by more than five hundred delegates from London Branches of the Workers' Educational Association, and from over two hundred organizations in the L.C.C. area, at a meeting held in the Memorial Hall, Farringdon Street. The Rev. William Temple, who presided, said that the democracy would not stand the whittling away, by any public body that pretended to represent the people, of the educational pittance that had been won by years of struggle. The resolution described the reduction of the L.C.C. Education estimate by £360,000 as a reactionary measure opposed to the interests of the nation.

FOR one economy of the L.C.C. there is some justification. They have offered "quick training for service" in infant schools to young women who have reached a tolerable standard of education. If we are driven to employ a certain number of half-trained amateurs, it is probably better to place them in infant departments than elsewhere. The amount of knowledge required by the infant-school mistress is small, and training in method, though indispensable, need not extend over a wide range of subjects. Love of children and sympathy with them is the one thing needful. How this is to be tested is not apparent. Selected candidates will receive three months' training, and will then serve for six months on probation. We are glad to see that the Council are relieving head teachers of some of their clerical duties. Of recent years these have become an increasing burden, and to those who are accustomed to go in and out of elementary schools the amount of time consumed in such matters as stock-taking is a continual source of wonder.

STRANGELY enough, it was from the *Times* pessimistic that there came a cry of exultation (in its *War and Education* Supplement of January 14) over the results of that test of character which the War has applied to the whole of our educational system. Probably four men out of every five were willing to serve in Britain's great new armies, even before Lord Derby's scheme was mooted. And they have displayed unconquerable courage in facing the most terrible engines of death that diabolic ingenuity has ever devised. It is, perhaps, well to remember that the good men of Essex, who were not lacking in courage, fell flat on their faces in front of the artillery used during the Civil War, and refused to rise for a time. The *Times* truly says that to-day "education discounted the nameless terror, belittled the moral effect, thrust the sound and shock into their true relationships. Men feared, but were able to look fear in the face." And yet teachers

said not a word of this wonderful display of courage and true self-possession. All the talk was of betterment. Minds were fixed on the weak spots of our system; and this fact is encouraging.

MR. CHAYTOR had no difficulty in obtaining the assent of the Head Masters' Association to the motion that it is inexpedient to abandon the teaching of German in schools. That the motion was well timed we have no doubt, for there has certainly been some falling off in the number, small at any time, of boys and girls learning that language. The idea of building a Chinese Wall round a great European nation, which has here and there found expression, is indeed an absurd one. Mr. Edmund Gosse, in his address to the Modern Language Association, showed that the proposal to sever all intellectual intercourse with England had not lasted long in Germany. Mr. Chaytor put the whole case in a nutshell when he said that, if German was a good subject for school study before the War, it is a good subject now. The value to European civilization of German literature and *Wissenschaft*—of the German mind, in fact—is not affected by the War, although the War has undoubtedly thrown into high relief the one-sidedness of German culture. The future of German as a commercial language may be influenced by present events, but it is by no means certain that it will be so. It is likely, however, that the demand for Spanish, Russian, and possibly Portuguese, in the business world will increase; and what seems most wanted just at present is more provision for teaching these languages, not as part of the regular curriculum, but as special subjects in schools, in evening classes, and in technical institutions.

THE discussion on Translation at the meeting of the Modern Language Association was rather a damp squib. Mr. von Glehn found little support for his method of reading French books without speaking any language but French. Those who remembered the furious battles of former meetings must have wondered what had become of the anti-translationists. Apparently translation is coming into favour again, after a brief trial of the substitutes for it. The history of the question may read teachers a lesson in the falsehood of extremes, and remind them that practical education must always be a compromise, and that the best methods are those which teacher and pupil can use best.

WE know not what weight the name will carry, but an article by Dr. Karl Muthesius in *Der deutsche Krieg* is a welcome gleam of light in the darkness. He tells us that the working classes in Germany are beginning to resent as an intolerable hardship the gulf that divides elementary and secondary schools. By their sacrifices in the War they have earned the right to higher education, and will clamour for a career open to undowered talent. Nothing could better serve the cause of freedom or hasten the downfall of a feudal monarchy more than the growth of such a true democratic spirit, and the opening of *Gymnasien* and Universities to all classes. We may dismiss as a sop to the Censor the contrast between the British Tommies who play football in their off-times and the Teuton *Krieger* who attend lectures on French and Belgian cathedrals. We wonder whether Malines and Reims are included.

THE War has stirred up public interest in history, and one of the features of the January meetings was the demand for extensions of that subject. Many modern

History.

language teachers are anxious that boys and girls should learn some European history; imperialist feeling found expression in the demand for the teaching of the history of the Empire put forward by Sir Charles Lucas and others; whilst one of the meetings of the Historical Association was devoted to naval and military history. All this presents a large problem for solution. It is evident that a program combining all these studies would be impracticable. Here, as elsewhere in education, the teacher will do well to bear in mind Burke's saying that it is no little part of wisdom to know how much evil—or ignorance—must be tolerated. Here, as elsewhere, we must be content to lay a common foundation of knowledge in the lower forms, and permit the higher forms to select some particular branch of the subject. What we should like to see done is the framing of a syllabus of that necessary common knowledge of the history of this island—by the Historical Association, possibly—with suggestions for the study of European history, universal history, or imperial history as a superstructure. Something of the kind has already been drawn up for English history by Mr. A. J. B. Green, of the Perse School, but his program, which appeared a short time ago in the *School World*, is to our thinking rather too lengthy.

KARL GRAVES, in his entertaining *Confessions of a German Spy*, pays women a left-handed compliment. Their perfect command of languages, their tact

Women as Linguists.

and adaptability, he tells us, besides other less desirable qualities, make them unapproachable as spies. Why should they not be employed, not as spies, but as detectives, by our Foreign Office and in consular offices? We are not, of course, recommending this as a new profession for women, but as showing that far more use of them should be made in the higher Civil Service.

"HOW is it that the French are actually increasing their education estimates?" We have been justly taken to task for this question asked in our December

French Schools.

Notes, but waited for the French Budget to confirm what turned out to be only the anticipation of a French authority. Meanwhile we can report that, in spite of the fact that the War has absorbed half of the male teaching staff, there has been far less dislocation or interruption than could have been anticipated in the work of the schools. In the *Lycées* the hours of work have been slightly reduced, and the curriculum has been similarly curtailed. The gaps in the staff have been filled by retired *professeurs* and in the lower classes by women. Belgians have also been employed. In village schools the class of men who are here serving as special constables have come to the rescue.

THE article by Miss Matthews comes opportunely to remind us of one use that our Museums serve, and makes us all the more regret the Government's decision to close them for the present. There may be other State reasons not revealed, but the saving effected is quite disproportionate to the loss. A few recreation rooms have been provided by private effort for the men either

Closing of Museums.

quartered in or passing through London, but these are wholly inadequate, and we want more than ever a counter-attraction to public-houses and (we may add without offence) the picture palaces. Paris is keeping all her Museums open.

LOCAL AUTHORITIES.

THE Education (Small Population Grants) Act is a minor, but none

A Useful Act.

the less welcome, instalment in the direction of reducing administrative work at this time. As Mr. Herbert Lewis, the Parliamentary Secretary to the Board, stated, in order to ascertain whether the small population grants had been earned, it has been necessary hitherto for two calculations to be made, both of which entailed a considerable amount of work in the offices of the Local Education Authorities and of the Board of Education. A further, and perhaps more important, justification for the Act is the provision in the code which requires the staff to be of a certain minimum strength before a school can benefit by the grant. Owing to the exigencies of the War, said Mr. Lewis, and the way in which teachers had responded to the call to the Colours, there was a deficiency of teachers. That difficulty must be met as best it could in all kinds of schools on the broad principle that the work must be carried on as well as possible. It was therefore necessary, in those circumstances, to relax the stringent statutory conditions attaching to small population grants.

ECONOMY is the order of the day. In those administrative areas

Economy.

where the provision hitherto has been on a generous basis and the Local Authorities have expended freely, if not lavishly, it is not difficult for estimates to be prepared which show, by comparison with other years, substantial reduction. The majority of administrative counties, however, with watchful representatives of agricultural interests upon their Councils, have always been obliged to practise economy, and therefore the task of their officials is exceptionally difficult. The main charge in all the estimates is, of course, the salaries of teachers which cannot be reduced, and, on the contrary, are automatically rising under appropriate scales. Any saving which might be anticipated owing to enlistments is, as a rule, more than counterbalanced by the salaries paid to substitutes and the allowances to those on service. It is much the same in other expenses of school maintenance. If the supply of school requisites is curtailed, the prices paid for the articles which are indispensable has advanced to an extent which nearly makes up the difference. The only material saving to be made is generally in the renovation, repair, and improvement of school buildings, and it is more than likely that economy in this direction is of the policy of the penny wise.

THE Kent Education Committee appear to have considered the

Kent.

pressing question of the reduction of expenditure with particular, if not painful, care. They point out, to begin with, that in pursuance of the Government's mandate in the autumn of 1914 to proceed energetically with all new works, the erection of two secondary schools was pushed forward. The increased cost of building in these and other cases led to an expenditure by way of concessions to contractors of about £1,450. Against any economies effected there is a prospective loss of revenue to be anticipated in the certain reduction of Government grants due to the closing of classes, the reduction in the number of pupils, and, on the elementary side, the release of children on licence for work in agriculture. Actual additions to expenditure are represented by premiums for insurance of school buildings against damage by hostile aircraft, and in the provision of window blinds to ensure compliance with the Lighting Orders. These drawbacks notwithstanding, the committee are able to make effective reductions of a considerable amount both in respect to capital and maintenance expenditure.

THE County Council of Durham, owing to the Local Government

Durham.

Board declining to sanction the application of that Authority for power to raise an additional rate for the purposes of higher education, has suspended evening-class instruction for this session. It is to be regretted that this valuable work has been interrupted, for the last report indicates that classes were conducted at a large number of centres, at which 28,803 students were registered. Since the date of the Education Act of 1902 the expenditure on "education other than elementary" has increased with somewhat abnormal rapidity. An interesting table in

the report gives the figures for each year, and the following relate to 1903-4 and 1913-14 :-

	Receipts.	Expenditure.
1903-4	£21,913	£23,575
1913-4	46,970	99,413

That is to say, the difference to be provided out of reserves or out of the county rate has increased from £1,662 to £52,443. It is pointed out that there is no fixed or satisfactory ratio between the Government grants and the amount of local contributions. The following figures forcibly emphasize this fact :-

Year ending March.	(a) Government Grant.	(b) Local contributions (Fees and Rates).	Percentages.	
	£	£	(a)	(b)
1902	19,192	230	98.8	1.2
1914	34,071	65,260	34.3	65.7

THE Education Committee for the county of Durham award a large number of junior scholarships, and for the examination held in 1915 there were 5,037 entries, 2,082 being under and 2,955 over twelve years of age.

Scholarships.

Mr. Robson, in his report, says, although it is gratifying to observe the increased interest which is apparently being taken by parents in these scholarships, judged by the steadily increasing entries year by year, very many of the candidates are put in for the examination without the slightest hope of success. Though it would be very undesirable to give the head teachers of the elementary schools authority to refuse any candidate the opportunity of competing, by withholding his or her application form, yet it would seem very desirable that parents should be encouraged voluntarily to consult head teachers as to the prospects of their children attaining scholarship standard. The examination is in two parts, written and oral, and there are, of course, separate tests for the children under twelve and those over that age.

IN the neighbouring county of Northumberland 1,117 candidates entered for the Junior Scholarships Examination, and of these 403 were classified as having reached a satisfactory standard. One of the questions in the English Composition paper required the candidate to punctuate the following sentence in two different ways so as to give it two different meanings :- "Sir Edward Grey says the Kaiser is the enemy of mankind." While this and a similar question, the examiner reports, proved quite within the ability of the brightest children, many omitted it altogether, while others wrote absolute nonsense. The candidate who offered this variation, "Sir Edward Grey says the Kaiser is a baby-killer," may be cited as typical of a considerable number who showed by their answers that they did not know what "punctuation" meant.

A REPORT on Secondary Schools and the preparatory training of teachers, for the year ended July 1915, issued by the Northumberland Committee, shows that there were 1,934 boys and girls in secondary schools, compared with 1,482 in 1911-12. Of this total 1,312 were paying the school fees and 622 holding scholarships or "free places." The schools were also educating 15 pupil teachers, 72 bursars, and 75 student teachers. In a statistical table particulars are given of the receipts and payments in connexion with the ten secondary schools for the maintenance of which the Authority is responsible. The total expenditure in six girls' schools with 645 pupils was £10,152, or £15. 14s. 9d. a head; in four boys' schools with 319 pupils £6,715 or £21. 1s. These figures include capital charges, and on maintenance only the expenditure was £12. 1s. and £14. 5s. per head for girls and boys respectively. If the expenditure on maintenance is reduced by the receipts, the cost was £3. 15s. 5d. per head for girls and £7. 5s. 4d. for boys. In these figures no credit is taken into account for the scholars holding scholarships, or occupying free places, nominated by the Authority. If, however, the schools are credited with the value of school fees in respect of such pupils, the difference between the cost of maintenance and the receipts for five girls' and two boys' schools, educating 734 pupils, amounts to only £428, or about 11s. 6d. per head.

ASSOCIATED BOARD OF THE R.A.M. AND R.C.M. : AWARD OF MEDALS.—The following candidates gained the Gold and Silver Medals offered by the Board for the highest and second highest Honours marks, respectively, in the Advanced and Intermediate Grades of the Local Centre Examinations in November-December last, the Competition being open to all candidates in the British Isles. Advanced Grade Silver Medal—Miss Elsa A. Welford, London, Pianoforte; Intermediate Grade Gold Medal—Miss Edith M. Purchase, Brighton, Singing; Intermediate Grade Silver Medal—Miss Doris H. Gamball, Liverpool, Pianoforte.

SCIENCE NOTES.

OUR condensed report of Sir Oliver Lodge's address necessarily misses the details which constitute its chief value. Sir Oliver Lodge's Address. His plea for training the average boy—or below average—on lines requiring more bodily industry and more inventiveness is not new; but it needed to be re-stated, as even now this type of work is regarded as a paragon, except in a few schools. In this connexion it is a hopeful sign that so many associations of teachers have impressed upon the Board of Education the importance of other than written work in connexion with the school examinations proposed in Circular 849. The direct appeal to Nature which Sir Oliver advocated is well understood and practised in our school Nature study; but there is usually either a bad gap between this and the formal laboratory work of the upper forms, or else the laboratory exercises of the third and fourth forms are too much occupied with practising the goose-step of determining the density of the given solid. It is possible to be academic—pedantic even—with balance and squared paper, just as with first and second aorists. Sir Oliver asks for something very different—a variety of mechanical enterprises, a cultivation of inventiveness through self-developed interests.

In other parts of the address emphasis is laid upon the advantages of reaching results by long thought and brooding. Educational v. Examination Problems. "One of the most fruitful methods of instruction I have found has been by problem—not an examination question, but an educational question. I mean a problem set, and time given for its solution." We have recently urged the point, made elsewhere in the address, that boys should know enough to recognize the planets, and be familiar with ordinary cosmical facts. Sir Oliver Lodge will find wide support in his expression of dissatisfaction with the type of instruction given in rural primary schools.

THE Science Masters have always secured a man of eminence as president, and this year Sir William Osler's brilliant discourse admirably sustained the high tradition established by his predecessors. His main subject was the importance of intensive science study at school for those boys intending to enter the medical profession. The urgent need for expanding the medical service of the country, at a time when its numbers are actually being depleted by war, is too evident to need arguing, and it gives special force to his plea. Nevertheless, the most vital feature of the meeting was the discussion on instruction in science for military purposes. An officer returned from France spoke with evident feeling on the great importance of such instruction in the schools, and stated that to his own knowledge hundreds of lives had been needlessly lost through the lack of information that should be in the possession of every officer. We may remind our readers that Sandhurst has for some years been the only great military college in the civilized world where the teaching of science is ignored, and we may add that even yet there has been no resumption of science teaching as such. Science masters in secondary schools other than those which have an army class should note that *all ranks* of our armies would benefit very greatly by some elementary knowledge of explosives, telephones, poison gases, and range-finding. The A.P.S.S.M. and its Honorary Secretary, Mr. C. L. Bryant, of Harrow, are doing a really national service in taking up this work, of which the need is painfully clamant.

MISS DURHAM addressed a large audience of the Science Teachers' Association on problems of heredity, giving a lucid account of Mendelian theory, which was illustrated with most interesting details of her own observations and experiments on colour in mice and canaries. At the close of her lecture she drew attention to the great importance of considering human inheritance from the Mendelian standpoint. With this general proposition we concur, but not with the suggestion that mathematical ability is a Mendelian character. The practical value of Miss Durham's experiments was beautifully exhibited in the new primroses which she has created with the assistance of Messrs. Veitch.

WE are glad to hear that the Science Teachers' Association has taken in hand the provision of pamphlets on recent advances written by specialists with a view to helping science teachers in schools to keep in touch with scientific progress. It should be more widely known that the society includes men as well as women. At the present time there is every indication that a strong association, uniting science teachers of different grades of schools and of both sexes, could do work

of national importance. Particulars may be obtained from Miss Stern, North London Collegiate School, Sandall Road, N.W.

A NEW Tungsten arc-lamp was recently put on the market by the Edison & Swan United Electric Co. It can now be seen burning in Victoria Street, Westminster, and promises to be the ideal lamp for lantern projection.

THE CHILD IN THE MUSEUM.

THE Christmas holidays marked the second act of an educational experiment begun in the long summer vacation, and it is not very daring to prophesy that it opens up a new vista. To many children of the less well-off classes holidays after a time mean boredom. Troops of children wander into every place of amusement and shelter that is open to them, and in picture galleries or museums, with unknown treasures around them, stroll aimlessly about or play games to the annoyance of visitors and the irritation of officials. They are in a world of interest and beauty, but their eyes have not yet been opened that they may see.

It was this that made a strong appeal to the Art Teachers' Guild. Members of the Guild, representing every branch of art, saw the garden of children running wild, and under present conditions still more wild. In this fallow soil they could at least sow the seeds that in the future might bear good fruit. They could lead the children to understand and admire the things of beauty, design, and order all round them, their place in everyday life. For this purpose the Victoria and Albert Museum was peculiarly fitting. With the hearty co-operation of the Director, Sir Cecil Smith, this enthusiastic band seized their opportunity. Volunteers came forward; they collected the wandering children, formed them into manageable groups, and invited them to go with the guides who would talk to them about many wonderful things. No one was urged to come; no one was pressed to stay. Interest was the sole spur.

By the kindness of Sir Cecil Smith, a small room was placed at the service of the Guild, and the children soon learnt that if they collected at its door someone would presently come and take charge of them. Under the guidance of the artists little bands of boys and girls and even babies who could not be left at home went off on discovery bent. Presently, before anyone was tired, pencils and paper were provided, and each was encouraged to draw any object seen. No help was given and the choice was free, and the results were often astonishingly good. Soon children came in troops. They told their friends, and officials smiled, and the hearts of Guild members and Director were glad. Peace reigned in the Museum, the peace of ordered liberty.

This first step, made in the summer, justified a further advance in the Christmas holidays. "The children have come in thousands," reports Miss Spillers, the Honorary Secretary of the Art Teachers' Guild, and the prime spirit of the movement. Helpers were drawn from a wider circle and more was attempted. One result has been the formation of the "Children's Room," which has created so much interest. Here are collected objects of special interest to children, among them dolls in typical costumes from the time of William I to Victoria; exquisite wrought-iron jewellery worn by the Prussian ladies in the Napoleonic wars, when their gold had been given to the State; and the greatest joy of all, dolls' houses, three in number, German and English, the newest a wonder with thirteen rooms, including an artist's studio, billiard room, nursery, provided with telephones and lighted with electric light. Plenty of chairs and low tables are a feature of the "Children's Room."

Every day during the holidays eager groups were led into the delightful room to study particular things and then to make pictures of them. One perhaps chose the flags of all nations, another the models of Russian costumes, and showed up very creditable drawings afterwards, and, with their strong cardboard drawing-boards and pencils and paper,

they looked very businesslike indeed. Even the babies sprawled upon the floor happy to scribble to their heart's desire.

But this was not all. The artist-guides wished the children to realize something of the production of the beautiful things they saw, and so gain a better idea of the use and meaning of design, and the relation of it all to the actual needs of daily life, and skilled workers helped to bring home practically to the little people the joy of craftsmanship. So, in another room, they were initiated into the mysteries of weaving and embroidery. They prepared real wool, wound it on a spindle, and really wove a piece of stuff. Tapestry acquired a new meaning. Little girls proudly wore bags embroidered in designs of their own invention. Little boys fell under the fascination of printing. They drew their own designs selected from good examples in the Museum, then cut them upon slabs of stout linoleum, and from these blocks printed off designs upon paper. Only those who have seen what can be done in this way, unaided, by quite small children keenly interested, can realize the real artistic feeling shown in stencilling done with colours.

Apart from the work of gathering stray children into groups, of arousing their curiosity and turning it into useful channels and so creating order and happiness of a new kind in unoccupied children, often tired and cross, an exceedingly friendly feeling grew up between guides and guided. The children talked freely with an absence of shyness. It was noticeable that the children came regularly. They were docile and even affectionate, as the set who always kissed their guide when saying goodbye. To be sent away was the only punishment. The services of the children themselves were enlisted as helpers, and boys were elected as monitors with the privilege of making themselves useful. Individual traits stood out strongly. Two tiny mites, out of their own money, gave flowers to the two ladies who had charge of them the last day in the summer holidays. Meeting again at Christmas, tiny Lily's first inquiry was: "What did you do with the flowers I gave you?" Children often set themselves difficult tasks. The round plaster casts of the sovereigns of England were by no means easy, but they attracted some. "I am drawing the Wicked King," said one boy—"Richard III. He killed the little princes in the Tower." "He does look a wicked uncle," said the grown-up, to which the sage of ten replied: "Yes, you can see that by his mouth. You can always tell what a man is by his mouth."

Where the poor child is there is always a baby, sometimes more than one. It is here that the habit of kindness comes in. "I can't have all these babies," said a perplexed lady to a child of eight in charge of three. The unfolded tale revealed a sick mother, and children packed into the streets with no one but the weary, worried little sister. Two children of the troublesome order stood by, a boy and a girl. They whispered together, then came forward. "Please, Miss, each of us will take a baby." And all were happy and good. Although the occasional and long-suffering baby is inevitable in the childish families turned adrift in holiday time to amuse themselves outside the home, the greater number varied in age from about five to thirteen. That they learnt to understand and appreciate much that they saw is evident from the work done of every kind and the intense pride that they take in it.

The work in the Christmas, as in the summer, holidays was for the whole duration of the children's time. The members of the Art Teachers' Guild and the Director of the Museum, by taking the raw material ready to their hands and using it with sympathy, are doing more than simply to inculcate the love of the beautiful, far-reaching as such efforts must be. In these times of portentous doings, when the future is big with unknown changes, with an apparent loosening of the bonds of discipline and control, when education itself is trembling in the balance, the work thus begun, carried on, at each step taking firmer and more definite form, is of incalculable value, and surely one of the noblest forms of War service.

E. C. MATTHEWS.

MORAL INSTRUCTION, HISTORY, AND LITERATURE.

By FREDERICK J. GOULD.

IT may seem a paradox if I say that these three things—namely, moral instruction, history, and literature—are fundamentally one and the same, and that it is therefore waste of time to debate the question "Cannot the principles of right conduct be taught more effectively through lessons in history and literature than through direct moral instruction?" This question has followed me, like a more or less friendly ghost, half-way round the world. In Great Britain, in the United States, and during a short official tour in the Bombay Presidency, I have, on hundreds of occasions, given direct moral instruction to classes of children, obviously and continually using history and literature for my material, and yet the inquiry has dogged my wandering steps—"Cannot the principles of right conduct be taught more effectively through lessons in history and literature than through direct moral instruction?" Not being devoid of humour, I smilingly hail the dear old conundrum whenever it presents itself. If I discuss it again at the present moment it is because I foresee that, after the War, the problem of education in general, and the moral end of education in particular, will assume the highest importance, and I would like to help in reducing the possibilities of irrelevant and useless controversy. Before entering on this brief exposition, however, I venture to affirm that, in the days to come, the artificial separation so often set up now between literature and history will disappear, and that literature, which is essentially the interpretation and æsthetic expression, in verse and prose, of contemporary life, will be mainly taught in connexion with its historical origins. Homer will be regarded as an organic part of Greek history, Dante of the Middle Ages, and Shakespeare of the Renaissance Age, and their poetry will be taken away from the formal "literature" teacher, and left as the most precious possession of the teacher of history. But I dare not dwell on this proposition just now.

The seventeenth, eighteenth, and nineteenth centuries were somewhat harsh step-mothers to moral instruction. In those times I fear that teachers of the Way of Life and the Way of Death to the young were too often what Burke would call "sophisters, economists, and calculators," who had inherited a dull, moralizing habit from medieval schoolmen and Protestant reformers. Their characteristic practice was to hurry over the biography or legend which constituted the true substance of their ethics in order to open a soul-deadening discussion on "what we may learn from the foregoing examples." Moral instruction got a bad name, and history and literature became the darlings of the philosophers who were willing to admit that the school ought to assist in the training of character. Moreover (and this I say with a trifle of hesitation), a certain type of teachers, who were not very eager to attack the central problem of conscience-building, found it convenient to shift to the muses of history and letters the responsibility of evoking an enthusiasm for the True, the Beautiful, and the Good.*

On Saturday, August 29, 1914, the Chief Rabbi of the Hebrew community in Lyons, named Abraham Bloch, was serving in the 14th Division of the French Army as an ambulance worker. He was on duty in a village in the Vosges when a German shell fell on a farmhouse in which a hundred and fifty wounded soldiers were sheltered. A fire broke out, and the patients were hurriedly rescued. At this moment a soldier, seriously injured, asked the Rabbi, whom he supposed to be a Catholic priest, to give him a crucifix to kiss. The Jewish minister, without any sign of hesitation, made immediate search, discovered a crucifix, and hastened to the

soldier's side. Having accomplished this act of charity, the Rabbi assisted another wounded soldier to a vehicle, and, while so engaged, was killed by a bursting shell.

If we tell this story to listeners aged, say, thirteen or fourteen, and if we so tell it as to throw into relief the competing motives of hereditary dissociation from the Christian faith and the desire to console affliction, we shall have employed, in effect, an example from history. If ever a poet, gifted with the vivid terseness which Leigh Hunt displayed in his *About Adhem*, transmutes this little episode into verse, we shall possess a compact piece of history and literature by means of which to convey a lesson in what is rather weakly called "religious toleration." I should prefer to say "religious generosity."

Now I regard the story just recited as a perfect specimen of the material adapted for moral instruction, and, since it includes both historical (biographical) and literary elements, the case might appear closed, and the advocates of "indirect" moral instruction by means of literature and history might score an easy triumph. "History and literature," they might say, "teem with such incidents, and what more do you want?"

In the first place, I should like to be sure that the manuals on the teacher's bookshelves did really prepare the facts of history and the treasures of prose and poetry for this high spiritual purpose. As to that, I will merely ask the reader to sample a few manuals from the nearest educational library and judge for himself.* One has to remember that a vast proportion of teachers are more dependent upon such aids than upon native insight.

In the second place, I want a very great deal more. The "more" that I want includes something exceedingly vital. This vital element is moral construction. Over and over again, to adult audiences who had just listened to a lesson of mine delivered to a class, I have affirmed, on the strength of these experiences, which they could test, that children take more pleasure in a series of stories logically connected than in a series of stories disjointed. Some day somebody will, I suppose, contradict me, but nobody has done so yet. I venture, therefore, to repeat that the human soul is fundamentally logical, that it applies logic to the moral life and ideal, and that, in children, this logical tendency is as much available for the teacher's use as it is a source of interest to the children themselves.

The isolated example, and the series of disjointed examples presented by "courses" of history and literature do not afford the exercise of the constructive faculty which young minds desire. No doubt, they do supply all that is needed for a "philosophy of history," but Hegel and Comte do not appeal to schoolchildren. Hegel and Comte took their philosophic power with them, and mastered their material for their own great ends. But with children it is not so. The teacher, choosing an idea (e.g. honesty, mercy, courage, justice, &c.) must help them to follow it through the winding maze of varied illustrations, and, because and when he does this, he employs the method of "direct" moral instruction.

The case of Rabbi Bloch might be arranged as a climax to a simple chain such as this: (1) The parable of the Good Samaritan, who ministered to a sufferer without any thought of his creed. Or one might relate the admirable legend (told by Sadi in the *Bostan*) of Abraham and the fire-worshipper. Abraham, about to repel the heretic from his table, is rebuked by the Angel of God. (2) The allegory of the Three Rings (Christianity, Judaism, and Islam) in Lessing's *Nathan der Weise*. (3) The nobleness of Rabbi Bloch.

History and literature, representative of the periods of Antiquity, Middle Ages, and the Modern Age, here contribute towards a moral construction. I do not, of course, mean that an ethical lesson, in order to be logical, must cover wide historical expanses. I only assert that psychology, including child psychology, finds this logical concatenation

* The remarks that follow illustrate moral instruction methods as applied to children up to the age of fourteen, after which period important modifications are necessary; but these cannot be here detailed.

* Let me balance this negativist criticism by a cordial recommendation of Dr. F. H. Hayward's recently issued *Lesson in Appreciation*.

natural and wholesome, and more helpful to moral thought and experience than the scattered hints of the time-table history and literature. Nor am I placing any accent on the topic just illustrated. Instead of religious generosity, let it be kindness to animals, or honour, or temperance, or what you will. Nor do I say that the logic of the constructive lesson should be announced beforehand or elaborated afterwards or emphasized by maxims. As a matter of fact, the carefully told parables and stories reveal their own logic, with the assistance of brief interpretations from the teacher and a few lines on his blackboard.

Finally, and without any attempt at comment, I will name the historical fact that, through the ages, Churches and schools of philosophy have never rested content with the narration of anecdotes and chronicles, but have sought to weld the miscellaneous presentations of Nature and life into a systematic view which makes logic an auxiliary to inspiration.

JOTTINGS.

THE REV. WILLIAM TEMPLE will give his Presidential Address to the London Centre of the Teachers' Guild, on "The Place of Education in Politics," at 9 Brunswick Square, on February 4, at 5.30 p.m. On Saturday, February 19, at 5.30 p.m., Dr. Walford Davies, Organist of the Temple Church, will give a lecture on "Music in Life and in the School."

THE Bradford Education Committee, after hearing a deputation from the Bradford Chamber of Commerce, who asked that the age of exemption for children from attendance at school be lowered from fourteen to thirteen years, declined to alter their by-laws. "Vertigina nulla retrorsum" is Bradford's motto.

Country Side Leaflets starts its second year of publication with a strong number. A new feature is "Naturalist Notes for the Month," by the editor, E. K. Robinson.

THE *Highway* opens the New Year with an admirable article, by Mr. Arnold Toynbee, on "Nationality." He examines the several tests proposed, and shows how each in turn breaks down. (1) *Language*. Trilingual Switzerland is a nation. Ireland, though its native tongue is moribund, is linked to England as Hungary is to Austria. (2) *Geography*. The same examples refute the claim. (3) *Religion*. Germany, more intricately divided than any other country between Lutherans and Catholics, is more unified as a belligerent than any other of the belligerent nations. (4) *Transition*. This in Germany is only a generation old, and, though a determining factor, is not a sure interpreter of the present reality. Thus we are driven to *Present Will* as the only test that brings nationality into relation with democracy, "will to co-operate in a common political life ascertainably existent among a given population."

THE tabular statement and analysis of the I. C. S. Examination of 1915, in the *Oxford Magazine*, fully justifies the decision of the Government to hold no competitive examination in the current year. The Magazine accepts with complacency the fact that of the sixteen successful candidates Oxford can claim only five, while Cambridge has eight. The first place was won by an external student of the University of London, and the remaining two came from Scottish Universities. The first half dozen men are well up to the usual standard, but after that there is a distinct drop in the marks. Winchester is the only Public School (with a capital P) that appears in the list.

THE Royal Society of Arts have added to the subjects of their Examinations for 1916 English for French and Belgians. A paper will be set including translation of English into French and French into English and a short essay in English. Candidates may enter either for the Elementary or the Intermediate stage. An Oral Examination will also be held. Candidates should apply for information at the Offices of the Society, John Street, Adelphi.

A CHRIST CHURCH contemporary, a friend of Dodgson, gives, in

the *Magazine*, the origin of his pen name. When questioned, he said: "You see, my Christian name is Charles, and, as *Carolus* is the Latin for Charles, I thought 'Carroll' would do very well. My name also is Lutwidge, and 'Lewis' came near enough to that."

SMALL girl, struggling with long multiplication sum: "I wish, mamma, I was a rabbit?" "Why, darling?" "Papa said they multiplied so quickly."

M. JAKES-DALCROZE is again visiting England, and will give a lecture and demonstration of Eurhythmics, on Saturday the 19th in Liverpool, and two in London during the following week.

WE welcome with the New Year a very old friend in a new shape, the *Athenaeum*, as a shilling monthly. As Mr. Edmund Gosse, who stands as sponsor, points out, there is room for a literary journal that shall deal with serious literature less ponderously than the old "three-deckers" and less casually than — (our readers may supply the blank).

REGISTRATION COUNCIL.—Some 8,000 have been added to the Register during the past year, bringing the total up to nearly 13,000. The printed Register will probably be ready by March at latest. The List of Teachers withdrawn from school work for war duties has already mounted to over 8,000. This, too, is to be published shortly. The chief subject that has engaged the attention of the new Council is the various forms of educational retrenchment proposed or adopted by School Authorities.

A TWOFOLD TALISMAN.

WOULD'ST draw down heaven
To hearts that grieve?
Believe and love,
Love and believe.
Would'st lift thine own
All grief above?
Love and believe,
Believe and love.

CAMBRIDGE TRAINING COLLEGE FOR WOMEN.—The Report of the Council for 1914-15 states that the activities of the College have not so far been seriously hampered by the War, and that the financial losses thereby sustained may be met by retrenchments without permanent injury to the College or injustice to the staff. The entries to the College were within a fraction the same as for the previous year. Of the 36 students who entered in the last two terms but one had graduated at a University, 24 in Honours. Of the 20 students who left in December 1914, 19 took the Cambridge Teachers' Examination and all but one passed. Of the 44 students who left during the year, 38 have obtained school posts. The services of an assistant lecturer have been dispensed with; otherwise there has been no reduction in the numbers of the staff or in salaries. This, the Report concludes, is an economy to which in the end the Council, though with very great regret, may find themselves compelled.

BLACK'S REGIONAL GEOGRAPHIES

By J. B. REYNOLDS, B.A.

SENIOR.

Demy 8vo, Cloth, with many Illustrations, Maps, and Diagrams.

2/- each.

THE BRITISH ISLES.

PROFESSOR SMITH'S NEW CHEMISTRY.

Elementary Chemistry for Schools.

By ALEXANDER SMITH, B.Sc. (Edin.), Ph.D., F.R.S.E., Professor of Chemistry, Columbia University. Adapted for British Schools by H. A. WOOTTON, M.A., B.Sc., Senior Science Master, Westminster School. Large crown 8vo, with numerous diagrams. 5s. net.

"Many allusions are made to the chemistry of everyday life and to substances which have special importance in trade and industry, and the book is of the type which should be used and mastered by every boy."—*Chemical News*

A Laboratory Outline of Elementary Chemistry.

By Dr. ALEX. SMITH. Crown 8vo. 2s. net. Companion Volume to the above.

"An excellent course of laboratory work, which the average student will undoubtedly find particularly interesting."—*Chemical News*.

Arithmetic.

By F. W. DOBBS, M.A., and H. K. MARSDEN, M.A., Assistant Masters at Eton College. Part I. Price 3s. Now ready. (Part II in the Press.)

[*Bell's Mathematical Series.*]

Plane Trigonometry.

By H. L. REED, M.A., Assistant Mathematical and Science Master, Westminster School. Crown 8vo. 3s. 6d. [*Bell's Mathematical Series.*]

"The variety of the questions which are taken from human life deserves high praise; it is only by long-continued effort that they could have been collected."—*Nature*.

Numerical Examples in Physics.

By H. SYDNEY JONES, M.A., late Scholar of Christ's College, Cambridge; formerly Head Mathematics and Physics Master, University College School. 3s. 6d.

[*Bell's Mathematical Series.*]

"A great advance on the ordinary book of its kind, a marvel of cheapness."—*Mathematical Gazette*.

RECENT BOOKS BY MARC CEPPI.

C'est la Guerre. Stories of the Great War.

A New Reader for Junior Forms. By MARC CEPPI, Whitgift School, Croydon. With numerous illustrations by GERTRUDE LINDSAY. Second Edition. With or without Vocabulary. 1s. net.

"Both stories and illustrations have imagination and humour—and good humour."—*The Journal of Education*.

"The best of all recent Grammars."—*Spectator*.

Grammaire Française Moderne.

By M. DESHUMBERT, late Professor at the Staff College, Camberley, and at the Royal Military College, Sandhurst; and MARC CEPPI, Croydon. Crown 8vo. 2s. 6d. net.

This Grammar is issued in two forms: (a) In French throughout for the Direct Method. (b) Under the title of 'A Modern French Grammar,' with the Grammatical Rules in English.

Sentence Expansion, leading to Free Composition in French by the Direct Method.

By MARC CEPPI and HENRY RAYMENT. Crown 8vo. 1s.

Bell's Shakespeare for Schools.

Edited by S. P. B. MAIS, M.A., Assistant Master at Sherborne School. 8ppt 8vo. With numerous Illustrations from original drawings by BYAM SHAW. 1s. each.

THREE NEW VOLUMES (*Ready Immediately*).

Henry V. Richard III. Romeo and Juliet.

"The general introduction to this series is full of life and spirit. To catch the Elizabethan spirit and see Shakespeare as he really was seems to be its keynote. There is a valuable chapter on the stage before Shakespeare, and well-selected extracts from Johnson's preface to Shakespeare. Notes, hints, and questions are added, making complete a well-conceived school textbook."—*Educational News*.

Europe in the Nineteenth Century.

An Outline History from 1802 to the opening of the Great War, 1914. By E. NIXON and H. R. STEEL. Crown 8vo. With Maps. 2s.

"Starting with the Napoleonic domination in the early nineteenth century, the authors survey in clear and succinct outline the main facts of continental history down to the outbreak of the present war. . . . As an introduction to the detailed study of European History, the book will be exceedingly useful."—*Educational News*.

ARMS AND THE GOWN.

By ATTESTATUS.

THE Head Master of Blundell's School stated at the recent Head Masters' Conference that "The place for the man of action was at the Front; that for the man of great literary ability was elsewhere." It is not too much to say that this was an affront to the profession of letters no less than to that of education. What would Sir Philip Sidney have said to it? Would Mr. Francis seriously have advised Rupert Brooke to have sat in his study writing sonnets while his less literary friends and contemporaries were sailing for the Dardanelles? The whole idea rests on a misconception of the function of letters, which accounts more than anything else for the low degree of literary accomplishment in the present generation. Nobody could profess to believe that literary talent, as such, could do anything definite towards winning the present War. The young man of scientific genius may make his best contribution in the laboratory, and no one will quarrel with the resolution which the Head Masters passed, recommending that he should be advised to stay there. But it is equally certain that the man of literary ability will not help the War by sitting at his desk. In fact, even in his own sphere of literary activity, he is not likely to do any good until he gets away from his desk for a while.

The idea that the man of letters, and, above all, the poet, is necessarily not a man of action is of quite modern growth. Many of the world's greatest authors have served in the field. Julius Caesar, Aeschylus, Thucydides, Cervantes, Raleigh, and Tolstoy leap to the memory. But, where they have not actually been soldiers or performed military service, they have certainly, as often as not, been men of action; they have taken part in public life of some kind or other, and have not been the long-haired recluses who now figure in illustrated interviews as types of the literary genius. This

is, after all, only what should be expected. Good literature—and, above all, good poetry—springs from experience of life; and even the more visionary writers, like Shelley, whose work is, in the nature of things, more divorced from the world of everyday life, are apt to suffer from a certain strain of unreality in their writing. The great visions of "Prometheus Unbound" would lose nothing if their author could sometimes conceive of ideal human activity as something less monotonous than always moving about in rather undefined regions in an enchanted boat. In short, literary expression has always been at its highest when literary men have been sanest and most nearly in touch with the ordinary life of the men and women around them.

Now the best service which men of letters can do at the present time is to bring literature into the sphere of reality. The armchair Tyrtaeus is no use to us. Nothing could be more contemptible than the man who sits in a well warmed room scribbling about the glories of war and its great effect on the character and soul of a nation, while others, perhaps no younger or stronger than himself, are experiencing the squalors of war in the trenches. One of the great dangers of modern war, in fact, is that for the most part the men who write about it do not take part in it. We owe the War itself largely to the silly romanticism of Teutonic professors and *littérateurs*. It was they who glorified it before the event, and if we are not careful they will be guilty of a similar perversion of truth when it is over. What we want is more of the candidness which was exemplified well the other day by an article from the trenches, published in the *Saturday Westminster Gazette*. The writer tells of the terrible death-scene of an English corporal who was lying in a corner of a trench just taken from the enemy, where every other passer-by stumbled against him. "Can't you let a poor devil die in peace?" were his last words. "After that," says the writer (I quote his words from memory), "I can have no patience with people who speak calmly of 'making war' as you might talk of 'making' tea or coffee."

Now, the position of the schoolmaster who teaches literary subjects is not far removed from that of the professional author, even if he himself does not write anything else than class manuals of history and the like. Class manuals are rarely literature, but there is no reason why they should not be so, and there would be more chance of their ranking as literature if their authors were more in touch with reality. There are very good reasons why many teachers should not join the ranks, but the worst of all reasons is that the schoolmaster is, by his calling, a man of letters rather than a man of action. In this case *cedat toga armis*. It is the only way in which the gown can hope to win any supremacy over arms, as well as to win a higher status in the eyes of the public, for somehow or other the profession must acquire a higher status if the nation is to be really educated.

There have been many just protests against the mean policy of making education the first and principal sphere of public expenditure in which economies are practised, especially where that economy takes the form of reducing the already sufficiently meagre salaries of assistant masters and mistresses. The schoolmaster loses all round. His hours are apt to become longer, his earnings to go less far. In the first respect he is on the same footing with the manual labourer, in the second with all the rest of the world. But he is worse off than any in the fact that his barely "living wage" is supplemented by no "War bonus"; it tends in fact to be pointed to as one of the national luxuries which we could afford to do without for a little. Now we know that all this springs from the fundamental disbelief of the English people in education. Here we are, obviously, in a vicious circle. The nation does not believe in the value of the schoolmaster's product and therefore it starves the schoolmaster. The product, on the other hand, is often poor because the nation does not make it worth while for the scholastic profession to improve its standard of ability. Which should be done first? Get the nation to have faith in the possibilities of education, and thus give education the opportunity of showing its best, or try to convince the

nation by good works even under the present rather desperate conditions? The latter, probably, is the only method which is practicable. The nation will not pay until it sees something worth paying for, and, just now, the example of false ideals, combined with efficient methods, given by the nation with the foremost educational reputation, has still further increased our own nation's scepticism.

The best way for the schoolmaster to justify himself in the eyes of the world is not to preach his own indispenability nor to plead that the literary man's place is elsewhere than in the field of battle, nor (as I have heard a member of the profession actually say) declare that "it is wasteful to make a schoolmaster into a subaltern; he ought to be on the staff!" It is, first, to prove himself capable of active service along with his non-scholastic fellows (many have already done so: their glory redounds to their profession no less than to their country); secondly, to direct the attention of the would-be economizers to the point where economy in education can be made, not only without loss but with actual gain—namely, by getting rid of instruction which is sheer waste. The other day a schoolmaster, who had just obtained a commission, was asked whether he was sorry to leave school. He said: "Not altogether. I am sorry to leave the boys, but I am tired of education which does not educate." He was thinking, no doubt, of instances such as occurred in a public school the other day, when, out of a Latin class of twenty-three boys, only five were able to give the Latin for "our house" correctly. The average time during which they had been "learning" Latin was found to be five and a half years.

The worst of it is that schoolmasters have too often justified this sort of thing and declared it to be necessary to mental training and the like. Can they wonder if the public considers them to be living in a world divorced from reality? When all is said and done, the English educator has the salvation of the cause of education largely in his own hands. Now is the time for him to prove his own true capacity, whether in the classroom or the trench. Even if education seems to suffer at the moment, it may win more glory hereafter. Rupert Brooke's death, though it has caused the loss of many works of genius, has enhanced the glory of letters. The schoolmaster, whether literary or otherwise, by showing himself willing to make the same sacrifice on the same terms as his fellows, can do a like service for education. Fortunately, despite the advice of Mr. Francis, he is doing it.

LANGUAGE STUDY IN SCOTLAND.

SCOTLAND maintains her supply of teachers chiefly through the Junior Student system, which annually provides about a thousand young persons, mostly girls, qualified to enter a training college. These pupils have in most cases done post-elementary work for six years, the last three of which aim at carrying on all the essential subjects "upon a broad front." The national ideal of the Scotch Education Department seems to be that teachers in elementary schools should find scope for a wide variety of talent and accomplishment. The actual result of the Junior Student system, nevertheless, is that nearly 50 per cent. of the pupils devote a very large portion of their energies to language study. No definite courses are prescribed, but the examinations cover a very wide field, and proficiency is tested in the case of English by means of one written paper occupying two and a-half hours. In the latest published report* it is stated that 48 per cent. of the successful candidates studied two or more foreign languages.

The interaction of the different languages, if we may judge from Sir John Struthers's recent report† on secondary educa-

* *Training of Teachers (Scotland): Report for 1913-14.*

† *Secondary Education (Scotland): Report for the Year 1915.*

tion, produces some dubious results. French is, of course, the most favoured choice, and certificated teachers in the shape of honours graduates seem to be fairly abundant in Scotland. But evidence accumulates to show that the efficiency of both teachers and pupils suffers from the comparative neglect of Latin. In both of the reports under reference stress is laid upon this defect. The lady in charge of the Glasgow Centre is of opinion that "at all stages of instruction beyond the junior division of a primary school the Latin-less teacher is surely an anomaly." If an anomaly means an exception to the rule, the statement ought to have been differently expressed, for the Latin-less teacher is no longer an anomaly in Scotland. The Latin-less pupils are likened by one Inspector to "straws in the stream, tossed hither and thither, dependent for the exact connotation of terms on the very insecure support of recollection and association." Sir John Struthers dwells upon this matter, and suggests as a partial remedy the systematic use of the dictionary, supplemented by some knowledge of the more important Latin roots.

The question is one that involves the co-ordination, not only of Latin with English, but also of French with Latin, of Latin with Greek, and of French with English. One Chief Examiner (name unknown) is certain that "the study of French as a chief language is directly injurious to the study of Latin; the deceptive similarity of the two languages leads to an incongruous mixture of both." He asserts that he would be surprised if statistics did not show that the combination of Higher Latin and French is as injurious to French as it certainly is to Latin. This embodies a challenge on a matter of the highest pedagogic importance: is any modern language association prepared to take up the gauntlet?

As regards Greek, Sir John Struthers greatly regrets that, except in a few schools of a special type, the old-fashioned curriculum, which had Latin for its first language and Greek for its second, with French or German coming in later as subsidiary, should be practically unknown. He thinks that Scotland is surely wide enough to have room for all. Thus we have direct testimony to the practical inelasticity of the existing Scottish system; the older, and presumably sounder, curriculum has come perilously near to extinction. Here, again, we are face to face with a problem that calls for solution; the champions of modern language teaching may well claim a hearing.

The interrelation of French and English studies is emphasized by Sir John Struthers. It is not enough that English courses should be so framed as to make advanced French easier; in many other respects collaboration between the English and the French teacher would be helpful to both, and harmful to neither. For example, "the question of translation is really to a very large extent a matter of English composition."

Both reports leave no doubt that the whole question of the simultaneous study of two foreign languages by young pupils demands careful reconsideration in Scottish schools. It is undeniable that in most cases either one language injures the other, or both languages are starved. What is the remedy? Sir John regards it as imperative that one foreign language should receive more time than the other. The less fortunate, he opines, should look to the future rather than to the immediate present; the little that is taught should nevertheless be well taught. In other words, the ideal for most schools would be two parallel courses, in one of which Latin is the main language and in the other French; and teachers are invited to frame their time-tables accordingly.

Nothing could more appositely illustrate the educational evils that result from the prevailing tyranny of the time-table, with its arbitrary divorce of kindred subjects. The drastic remedy foreshadowed by Dr. Hayward would seem to be indicated: "Possibly *subjects* and *time-tables* will have to disappear altogether—the former because they are not true units from the educational standpoint; the latter because, as means of keeping subjects apart, they make the false units falsier than ever." The whole trend of the Scottish report is to show that no language beyond the junior stage is a true unit, and that the Scottish ideal of a well-informed teacher is a sound one. On the other hand, the practice of the Department has tended

to over-exalt the narrow specialist in the secondary school, while leaving the Junior Student course a congeries of disparate units—*arena sine calce*.

The report on training colleges states that some time is now being given to the experimental study of pedagogy, and some "tendre croppes" have already appeared. But the Chief Inspector reminds the investigators that they must not be too prone to confine themselves to the more academic aspects of psychological study; the work they are expected to do must bear directly upon the schools. The useful distinction often drawn between pedagogy and applied psychology needs to be observed. The "psychology of the time-table" is a subject of inquiry that may be commended to the notice of those teachers who covet the new, and unfortunately too cheap, degree of "Master of Education." Sir John Struthers's interesting and suggestive report hints at many other questions that intimately concern the training colleges. In the accepted sense of the words, it is not at all an official report; it is mainly a thoughtful account of the difficulties that confront teachers and pupils in the endeavour to co-ordinate their school work under a system which is apt to obscure the essential unity of the educative process.

F. E. I. S.

SAFE NOVELS.

To Arms! A Novel by W. H. WILLIAMSON.
(6s. Werner Laurie.)

This is in truth a narrative of the first phase of the War as it appeared to an English officer at the front, and the framework is so slight that, were it worth while, it would be easy to divest it of the romantic setting, and reissue it as a chapter in history. The War surprises a party of holiday makers, the Van Stuytens, a rich Belgian family, Gillenstein, the typical German officer, Captain Oake, the hero of the novel, and Mary Hyde, a lovely American heiress, with whom both men are in love, and who hesitates which of the two to choose. After miraculous escapes and prodigies of valour the curtain drops on the three in a base hospital, Gillenstein a wounded prisoner, Oake a V.C., and Mary a Red Cross nurse, his affianced bride. So much for the novel *qua* novel. As for the fighting, some of the adventures, for instance, the laying and working of a field telephone, by Oake, disguised as a refugee Frenchman in an abandoned house, are told with spirit, and one side of the British Tommy—his sportsmanlike instinct, his pluck and careless courage, and his schoolboy love of chaff and practical joking—is well rendered; but it is only one side, and we are left wondering why with such an army and such foes we are still fighting. It is clear that the author is not used to arms, else he would not make Captain Oake lay about him with his sword, and such a sentence as "Mary was a little less transfixed with the skewer of atrocity than the inhabitants, and the likeness of Nero and Rome occurred to her," shows signs of haste.

JONAH AND THE WHALE.

"HOW to Jonah sounded harshish,"
Get thee up and go to Tarshish;
So before the days of Krupps
Sang the *Burschen* in their cups.
In these days of pirate Huns
Otherwise the legend runs.

When for Tarshish bound once more,
Jonah paced the Joppa shore,
Up and spake a gentle tar,

"Scuse me, Sir, outside the bar,

Just about to sail,

Lies a P. & O.;

I you there will row."

"What's her name?" "The Ancona."

"Thanks, my friend," said Jonah;

"I prefer my Whale."

REVIEWS AND MINOR NOTICES.

Elements of Geometry. Parts I-VI. By S. BARNARD, M.A., and J. M. CHILD, B.A., B.Sc. (4s. 6d. Macmillan.)

This book is interesting from more than one point of view. It is one of the best textbooks on geometry that have been published during the present century. It is the work of writers who eleven years ago gave us, perhaps somewhat hurriedly, a textbook on lines that were then new and untried. It represents the results of as many years' additional experience.

The book, when complete, will consist of eight parts. Of these, we have the first six before us. These deal with the straight line, &c., areas, the circle, the areas of rectangles, similar figures, and miscellaneous propositions. Part VII, which is in preparation, will be devoted to solid geometry; Part VIII, which is in use in MS. at Rugby, to the modern geometry of the straight line and circle up to scholarship standard. The first six parts therefore contain all that we shall have on elementary plane geometry.

The most striking point about the book is its almost complete return to Euclid. Except that the theorems are to some extent rearranged, it might be classed with one of the best editions of Euclid before the recent changes were made in the teaching of elementary mathematics. The return to Euclid is evident from the very beginning, from the statement of the axioms and postulates used, and from the method of proof of the first proposition. It is even more marked in the treatment of parallelism and in the definition of tangency. It is conspicuous in the inclusion of the propositions of Euclid's fourth book, and especially in the construction of an isosceles triangle with each angle at the base double of the third angle. Still more perhaps is it to be noticed in the retention of some of Euclid's propositions which are of little value, such as III, 23 or II, 2 and 3, the latter being merely particular cases of II, 1, and of no great use in themselves.

Some general points may be referred to before proceeding to details. The first is the treatment of hypothetical constructions. They are used indeed, but they are given as a series of postulates. This, we think, is to be regretted. It is easy to prove that a straight line must have a middle point, that an angle must have a bisector, and that a straight line may be drawn perpendicular to a given straight line. A second point is that no references are given; and this seems to us a feature to be commended, as the reasons for every step in a proof are always fully stated in words, and we have as yet no definite order of theorems such as we had when Euclid reigned supreme.

The definitions, which are very numerous, are more carefully drawn up than usual. In the parts of a book which are devoted to plane geometry, it would seem unnecessary to mention that a quadrilateral, a polygon, and a circle are plane figures. If it is necessary, then a rectilinear figure should have been similarly defined. The definition of a square is an improvement on that usually given. The only definition which seems to us a little unfortunate is that of the distance between two parallel straight lines, which assumes that this distance is constant.

With regard to the bookwork, there is little to be said. It is well set out, it is clearly written, and, with one or two exceptions, it is not too lengthy. The exercises are very numerous. There is an ample supply following the propositions and designed as direct exercises on them; there are many sets of miscellaneous exercises which are rather problems than riders, as well as frequent numerical examples. The diagrams are clearly drawn and not too large, and, being in black on a white ground, are a welcome change from those which illustrated the authors' earlier volume. We may notice that the figure of Theorem 2 (Euc. I, 14) is drawn correctly, though beginners often find that this increases the difficulty of the proof, while that of Theorem 6 (Euc. I, 27) is given as in Euclid.

In the arrangement of the theorems, there is but little difference from that in some other textbooks, except in the

early introduction of parallel lines and in the separation of some of the theorems on congruent triangles. Converse theorems are, as usual, kept together. Euclid I, 13, 14, and 15 occupy the first place, though the last theorem seems unnecessary after the statement that an angle is unaltered in magnitude when its arms are produced. As already mentioned, Euclid's definition of tangency is adopted in the text; but the proofs depending on the limit definition are also given. The theorems of Euclid's second book are proved formally, though much more briefly than in the original. Euclid's fifth and sixth theorems are retained as separate propositions, a step of which most who have taught the subject will approve.

The book as a whole is full of interest. Though in some respects a reversion to past methods, it is of course free from the chief disadvantages of Euclid's *Elements*, the rigid order and the dull long proofs. The numerical examples and practical illustrations, as well as the introduction to trigonometry, cannot fail to be of service. Looking back on the textbooks of the last twelve years, we can recall few that can contend with this in so far as geometry is taught for its educational, rather than for its practical, value.

The Art of Story-telling. By MARIE L. SHEDLOCK.
(5s. net. Murray.)

Miss Shedlock is a past master in the mystery of story-telling, an art that she has practised and lectured on for the last fifteen years, both at home and in the States. In this volume she freely imparts all the secrets of the craft for the benefit of teachers, and gives specimens both of model stories culled from various sources and of stories in the form in which she has related them to children.

The author tells us that she once meditated a learned treatise on the origin and evolution of the story, but abandoned the undertaking as beyond her powers. She has, however, in this volume not confined herself to a mere exhibition of the art, but has expounded at the same time the theory on which her practice is founded. We must determine first what our aim is, why we tell children stories, before we can decide what stories we shall choose and how we shall tell them. Of the first and chief object as here laid down, there will be little dispute: "to give children dramatic joy, for which they have a natural craving." Here "dramatic" must, of course, be taken in its original sense, so as to include all narratives of action, the dramatic lyric, the myth, the *saga*, the *Märchen*, the ballad. As with the race, so with the child of to-day, the drama proper, tragedy and comedy, was a later development, and the generation that were enthralled by the "tale of Troy divine," as told in *The Iliad* or *The Odyssey*, could not have appreciated *The Agamemnon* or *Oedipus Tyrannus*. What Miss Shedlock really means, and rightly insists upon, is that the story satisfies a natural and healthy instinct of the child, his love of action and hearing of action, that it opens magic windows, that its primary object is to delight, and that all else is a secondary consideration. In fact, we should go further than the author, who quotes, as summarizing her doctrine, the famous passage from Sidney's *Defense of Poesy*, of the poet who, pretending only to charm the young and old, "doth intend the winning of the mind from wickedness to virtue," against which we should set Tennyson's epilogue to *The Sleeping Beauty*:

So, Lady Flora, take my lay,
And, if you find no moral there,
Go, look in any glass and say,
What moral is in being fair;
And to what uses shall we put
The wildweed-flower that simply blows?
And is there any moral shut
Within the bosom of the rose?

In satirizing the apologue or moral tale, with the moral writ large, Miss Shedlock is flogging a dead horse; but she still insists that the story-teller should have a moral lesson in view, though this should not be apparent at the time to his audience. Thus, she quotes an idiotic story of a girl who falls down a steep bank while reaching over to pick a wild flower, and is

nearly drowned, with the moral that one step in sinful indulgence may lead to the Gulf of Perdition; but she is careful to add: "To-day the teacher would commend Jane for a laudable interest in botany, but might add a word of caution about choosing inclined planes as a hunting-ground for specimens, and a popular lucid explanation of the inexorable law of gravity."

To cultivate a sense of humour is given as the second object; we should be inclined to assign to this a very subordinate place. A sense of humour comes late, if at all; and it is only humour in its broadest and most primitive forms that will appeal to the ordinary child. He will enjoy Noman blinding the drunken Polyphemus just as he enjoys the clown and the red-hot poker; but the humour of Shakespeare's Poor Tom or Sterne's Uncle Toby will leave him cold; and, as the author warns teachers, the cheap wit of *Funny Folk* is not to be encouraged.

We are conscious throughout that Miss Shedlock's children's stories have paid a double debt, and served both for classes of children and adult audiences. She insists too much on the action and delivery of a trained artist, and too little on naturalness and simplicity. To become a story-teller presupposes a natural gift or aptitude besides a love and understanding of children, and it is not every kindergarten teacher who should attempt it.

At the same time, we must strongly deprecate Miss Shedlock's anticipation of the specialist story-teller—an itinerant rhapsodist or minstrel who pays periodic visits to schools, and is to the children as impersonal as any actor or lecturer. There is no need, as the author insists, for the story to be correlated with the other subjects taught, but it is essential that the teller should be intimate with the class in order to suit her story to their intelligence and interests, and also to enable her to gauge the impressions and effects of the story.

The bibliography at the end, culled mostly from American sources, is not well arranged, and will not be of much service to English readers.

The Principles of Understanding. By HENRY STURT.
(5s. Cambridge University Press.)

The sub-title explains that this book is an introduction to logic from the standpoint of personal idealism. Starting with the thesis that "Logic is pre-eminently a study of the actual," it is not surprising that Mr. Sturt departs considerably from the traditional conception of a treatise on logic. The book is, in fact, much more psychological than logical in respect of subject-matter. We may say at once that we are in cordial agreement both with his point of view and with the great majority of his conclusions, so we shall not be misunderstood when we find fault with several features of the work. It is long since we have come across such a fatiguing pertinacity in redefining recognized technical terms. There is a curious contrast between the breezy freshness of Mr. Sturt's subject-matter, point of view, and illustrations, on the one hand, and his merciless constraint of vocabulary, on the other. No doubt the *distinguo* attitude has something to be said in its favour, but surely clearness could be attained without such drastic changes as keep the reader continually on the tenter-hooks lest he should understand an ordinary technical term in its ordinary technical sense. "Understanding" itself is used in the sense of "knowledge," "perception" is limited to mean "the cognition of situations," "intrinsic quality" is made equivalent to "suchness," and "passion" is "our tendency to respond to any sort of motive which makes call upon our personal energy. Passion is 'what we exhibit when we are eager, whether to pursue or to get away.'" So "judgment" becomes "an act of noetic synthesis in combination with a passionnal interest, supported and rendered intelligible by connexion with a wider synthesis and interest." Speaking generally, Mr. Sturt is consistent in his use of his formidable revised vocabulary, but he occasionally uses one of the terms in its ordinarily accepted sense, as when he maintains that "the doctrine that passion is the enemy of reason" is a fallacy.

The great merit of the book is that within the 299 pages of text it presents a clear and original synthesis of all that is

best in current psychology. Starting from the doctrine of noesis elaborated in Stout's *Analytical Psychology*, Mr. Sturt works in most of what is valuable in Mr. William Macdougall's contribution in *Social Psychology*, and does not neglect what the Austrian school of psychologists has to say. It is not to be supposed that our author merely accepts and rearranges: he is severely critical in his treatment of the work of his predecessors, in many cases greatly improving what they have done. Above all, he works up into an organic whole the more or less disparate contributions already made to his subject. He has hit upon a central idea that unifies views that have hitherto been treated as mutually exclusive. Setting out with the principle that all mental process is purposive, and that the affective elements—what he calls the passionnal—supply the motive force, he is able to build up a system that is highly satisfactory from the general point of view, and of special value to the teacher. For the reader cannot fail to see that Mr. Sturt has a keen interest in education. He is not always complimentary to our profession. He has a wholesome dislike for other people's pedantry, points out in one place that teachers are inordinately averse to change, and in another devotes a whole page to an attractive description of their inherent tendency to destroy originality. All the same he understands our problems and our difficulties, and makes valuable suggestions for our guidance. We do not think that the author of *The Logical Bases of Education* would give the answer Mr. Sturt obviously expects to the question: "What educator who professes to train the understanding makes appeal to Logic?" But when it comes to the correlation between character and fallacies, the teacher feels that the profession is coming into its own. No doubt those critics who enjoy pointing out how educational theories gain a reputation in direct ratio to the degree in which they flatter the teacher, by laying stress on the power he has of influencing the character of the pupil, will be eager to point the finger at Mr. Sturt, but the intelligent teacher will be glad to buy wisdom from the book even at the price of a rebuke from such pessimistic critics. For our author is eminently hopeful in his outlook. His philosophy is encouraging. He warns us at intervals of the dangers of material illustrations of spiritual process, and occasionally he falls into the trap against which he warns himself; but generally speaking his illustrations really do cast light upon the dark places where they are introduced, and in many cases, as for instance the Brownies on page 141, they give a word of comfort as well. Probably Mr. Sturt's theory of cosmothesis is the most significant thing in the book, and with this theory the teacher may well rest content. It supplies him with an admirable working hypothesis for his professional guidance.

The Spirit of Man. An Anthology in English and French from the Philosophers and Poets made by the POET LAUREATE in 1915. (5s. net. Longmans.)

More anthologies have already appeared in the first fifteen years of this century than in the fifty preceding years, and among the anthologists are numbered authors no less distinguished than W. E. Henley, Sir Henry Newbolt, and Sir Arthur Quiller-Couch; but, to use a much abused term, the Anthology before us is unique. It does not profess to have gathered together all the best illustrations of his theme in poetry and prose known to the editor. "Whatever merit or attractive quality it may have will lie in its being the work of one mind at one time." As such it will be an invaluable document for future historians of English literature to consult, an unconscious autobiography revealing the mind and art of the Poet Laureate even more intimately than his own poems.

The first feature that strikes us is the independence, we had almost said the arbitrariness, of the maker. He chooses what has pleased himself, not what will please his readers. For popularity he cares no more than did Landor. He begins with a translation of Spinoza, and ends with one of the Salisbury Antiphons. He sets at nought all the accepted canons of the anthologists, quotes a stanza or two of a short lyric and the sextet of a sonnet: the longest extract in the volume is a translation from the sixth *Aeneid* in Mr.

Bridges' experimental quantitative hexameters, and the only original poem he admits is an experiment in scazons. (We wonder how many scholars would discover for themselves the metre.) Gray's *Elegy* is one of the few hackneyed poems admitted. Apparently for the sake of an amended edition six stanza are omitted, and the rejected "redbreast" stanza is reinstated at the end. ("Winds slowly," in l. 2, should not have been allowed to pass.) An English Anthology is the last place where one expects to find a corrupt passage from Aristotle's *Metaphysics*, interpreted as "the one original foundation of the Christian doctrine [of the Johannine Logos]."

These are idiosyncrasies, and it is of more interest to note which are Mr. Bridges' favourite poets. The rough test of frequency gives the following order: Shelley, Shakespeare, Milton, Keats, Wordsworth, Blake; but, to judge by the space allotted, Milton would be *facile princeps*. Of Browning, Swinburne, Rossetti, there is not a line.

Spirituality is the basis and foundation of human life, and the proper work of the philosopher, the poet, and the artist is to interpret the world of matter in the language of the spirit. Mr. Bridges is catholic in his tastes, and he includes among the "spiritualists" Aristotle and Spinoza, Homer and Virgil, Ronsard and Villon, but we may doubt whether he "would admit of his crew" Victor Hugo and Walt Whitman. He is a poet of contemplation, not of action, and what most attracts him is medieval mysticism tempered by "the beauty which was Greece."

But for the preface, none would have discovered that the anthology was written in war time, and, indeed, provoked by the War; yet this tells us that Mr. Bridges is no Vigny in his ivory tower. He feels as acutely as any the present tribulation and the conflict between light and darkness; he bids us possess our souls in patience, confident that in the end the spirit of man must triumph over the world and fleshly lusts.

Stanford's Compendium of Geography and Travel. New Issue. Vol I: *North America*. Edited by HENRY M. AMI. Second Edition revised. (15s. net.)

In no region of the globe have such changes, political and economic, taken place since the last edition of *Stanford's Compendium* was published in 1897 as has British North America, and in particular Canada, nor anywhere has the geographical and geological survey of the country made such rapid strides. A few facts will bring this home. The census of 1901 gave the population of British Columbia in round figures at 178,000; that of 1911 at 392,000. In the same period the population of Victoria had risen from 20,000 to 31,000, and it is now estimated at 40,000. In 1791 Captain Vancouver discovered that Vancouver was an island. The site of the city that bears his name was staked out in 1842, but it does not appear in the census of 1881, when it was still virgin forest with a few squatters' clearings. Ten years later it had a population of 13,000, and twenty years later of 100,000, and it is now estimated at 160,000. Only the discovery of goldfields or a great railway company can work such marvels. In 1897 one half at least of the million square miles of Canada were still a *terra incognita*, unknown save to the trapper and stray squatter. These since have been explored by the Government Geodetic Survey and mapped out, and all this information has been used and incorporated in an accessible and readable form by Mr. Ami.

The editor, wisely no doubt, makes no reference to the War, though it has already, by diverting its commerce and stopping immigration, profoundly affected the economic conditions of Canada. Whatever the end may be, it will make a new world, and our geographies as well as our histories will have to be rewritten—or at least re-edited. Who can estimate the results of prohibitive tariffs between Canada and Germany, or of the Panama Canal, which will lessen the distance between Vancouver and Liverpool by 6,000 miles? Meanwhile we have to thank Mr. Ami for a complete and accurate survey of the physical and political geography of Canada and Newfoundland, well provided with maps and other illustrations.

Notae Latinae. An account of abbreviation in Latin MSS. Minuscle Period, circa 700–850. By W. M. LINDSAY, F.B.A., Corresponding Member of the Institute of France, Sanders Reader in Palaeography in the University of Cambridge, 1910, Professor of Humanity in the University of St. Andrews. (21s. net. Cambridge University Press.)

Following in the steps of the illustrious Traube, to whose memory the book is dedicated, St Andrews' eminent Latinist and Palaeographer has produced a work which it is easier to praise than to review. In previous publications, as in the St. Andrews University series and elsewhere, Prof. Lindsay had given indications of the recent bent of his studies, and this volume contains the results of his examination of well over a thousand Latin manuscripts in this country and abroad, the catalogue and account of which fill fifty octavo pages. It may be truly said to mark an epoch in palaeographical research and will prove a veritable treasure-house not only to those who wish to study scientifically the characters and affinities of medieval manuscripts, but to those who desire to proceed methodically in the reconstitution of Latin texts. The outward form of the book is that of a dictionary. After a brief introduction on abbreviation in general, the abbreviated words are given in alphabetical order in three chapters under the headings of "Notae Communes," "Nomina Sacra," and "Notae Juris" to which last is added a list of "capricious abbreviations." We congratulate the University of Cambridge on having secured this work for a place among its publications.

"New Art Library."—*The Artistic Anatomy of Trees.*

By REX VICAT COLE. (7s. 6d. net. Seeley.)

This volume should appeal not only to the art student, but also to the teacher of botany. Mr. Vicat Cole is the son of the famous R.A. and himself a distinguished artist, as the illustrations prove, and a teacher of art. He shows the pupil what to look for and how to set to work, and he does it.

The volume begins with thirty-six full-page reproductions of landscapes by masters of the art: Giorgione, Rembrandt, Hobbema, Gainsborough, Turner, down to still living artists, G. Clausen and David Murray, and the text points out what these painters intended and how their object is effected. Trees are studied strictly from the artist's point of view; but, just as a figure painter must know something of anatomy, so a landscape painter will be greatly helped, even if it is not indispensable to his art, by a knowledge of the structure and growth of trees. The careful diagrams in the text and line-drawings of buds, leaves, blossoms, and fruit will serve the botany teacher no less than the art master. The book is both a *livre de luxe* and an ideal manual for the art student.

Infant Mortality. By HUGH T. ASHBY, M.D. (10s. 6d. net. Cambridge University Press.)

Dr. Ashby has contributed a useful volume to the literature of infant mortality, of especial value to the school nurse and social visitor, who must be conversant with the leading facts and principles that modern research has yielded, if they are to carry out their important work, in conjunction with the doctor, with intelligence and hygienic knowledge. The author's wide experience as a doctor in the poorer districts of Manchester and Salford enables him to speak with practical knowledge of the social conditions and phenomena under which the poor live; and differentiates this manual from the works that encumber the library shelves, wherein facts obtained at second hand or imperfectly observed, or obscured by biased theories and views, serve to bewilder rather than enlighten the inquirer. Dr. Ashby's inferences and conclusions upon the highly controversial subject of married women in the labour market, are, on the whole, those adopted by persons able to regard the problem in its right relationship and proportion to the fundamental service of woman to society, and who are neither feminist nor anti-feminist. It is proved beyond question, as shown not only by statistics, which must of course be used with the greatest caution, but by the observation and experience of everyone who fairly studies the home where the mother is an habitual wage-earner, and the home where the man is the exclusive earner and the woman the spender and conservator, the latter is not only overwhelmingly advantageous from the domestic standpoint, but also from that

of the nation's well-being. We believe that those who have closely and intimately studied the domestic and social life of the working classes, will go further than the author in an insistence upon the imperative necessity of the mother's services and functions being solely devoted to the home, and not merely for a few months before and after the birth of the child. The author in the chapter, "Why it is that the Married Women go out to Work," expresses the fear that legislation prohibiting this work would result in there being greater poverty in the home, the mother's earnings (he says in another chapter) "enabling the family and herself to live more comfortably."

Now we venture to ask Dr. Ashby to compare the conditions, even as regards actual food and material comfort of the family, where the mother goes out to work, and that in which the family depends solely upon the man's earnings, presumably in each case twenty-five shillings weekly. Assume the mother in the one case earns an extra ten shillings a week. Out of this she has to pay for the infant to be boarded daily at a crèche. This will probably mean taking off one shilling and sixpence. She herself having no time to see to the two other children will give a neighbour something, usually sixpence a week, to "see to their dinner," or failing this, the children will get their own dinner with a penny or two-pence a day in lieu of pudding. In place of utilizing every scrap of food and of buying the cheaper portions of meat and fish, and converting them into wholesome dishes of the most economical kind, adding thereto, at very little cost but a good deal of labour and skill, nourishing vegetable soups, puddings, and the like, the exhausted wage-getting mother must rely upon the costly, poisonous, innutritious tinned foods. The consumption of these tinned foods upon which the wage-earning absentee must rely is simply enormous, and there is, unfortunately, scarcely a village to which they have not penetrated.

Other chapters deal in the most practical fashion with the causes that constitute infant mortality, the steps that should be taken to prevent it, the establishment of centres for mothers, and one specially to be recommended to educationists, "The Education of Girls in Domestic Science." The education of girls in all social ranks in their special and peculiar province of, for what may be called in lieu of a better word, "Home Craftsmanship," is one of the most serious of modern questions.

The Law relating to the Child: Its Protection, Education, and Employment. By ROBERT WOLSTENHOLME HOLLAND. (5s. net. Pitman.)

This is a book that every head teacher in the elementary schools should possess. It gathers together in a clear and concise form much valuable legal information about which teachers at present are ignorant or uncertain.

Fatigue. By A. MOSSO. Translated by MARGARET DRUMMOND and Prof. W. B. DRUMMOND. (2s. 6d. net. Allen.)

We are glad to note the new cheap edition of this translation, which first appeared in 1903.

A Short Historical Latin Grammar. By W. M. LINDSAY, M.A., Fellow of Jesus College, Oxford. Second Edition. (5s. 6d. Clarendon Press.)

Students and teachers of Latin philology will welcome the re-appearance of Prof. Lindsay's *Short Historical Grammar of Latin*—a useful elementary manual, which has been out of print for many years. There are few changes in the book, nor does the new edition of Sommer's *Handbuch* (1914) appear to have been utilized for the revision. (The preface is dated September, 1914.) Otherwise we could hardly have had it said that "both *j* and *v* are necessary for a manual on Latin philology." But the author seems not to count this a fault in an elementary manual, which, he says, "must always lag behind the vanguard of research." The alteration upon which most stress is laid is the recasting of the paragraph upon the pronunciation of the diphthongs for the purpose of "exposing the fallacy" which underlies the "authorized" pronunciation of the *ae*—e.g. in *terrae*. The scheme of the Classical Association, which is seemingly aimed at here, recommended the pronunciation of *ae* as *ai* for pedagogic reasons, and the true pronunciation of that diphthong in the Golden Age of Latin is certainly involved in some doubt. But, lest the unwary reader should be misled, it ought to be said that Prof. Lindsay is not always a safe guide in the region of phonetics, where a keen ear and a rigorously scientific discrimination of sounds are absolutely indispensable. To pass over the slipshod expression "*ae* was the long (more correctly the diphthongal) form of *e*, the short 'open' *e*-sound," which no strict phonetician would have written, his directions for pronunciation are vitiated by two circumstances, ambiguity as in the case of the pattern word "path," which is pronounced in at least two different ways in this country, and impracticality, as where a foreign sound like the German *ö* is prescribed to the student without any indication as to how it should be articulated. We are

glad to see that more attention has been given in this edition to the needs of students of Romance philology.

Household Management. By E. STODDART ECKFORD and M. S. FITZGERALD. (2s. 6d. Hogg.)

This is a well written, well arranged, and thoroughly informed book by two experts on the staff of the National Training School of Cookery, with a preface by Mrs. Clarke, the Principal. Domestic Economy and Management are skilled arts, requiring for their efficient practice knowledge, training in method, and practical experience; and such a handbook as this ought to do much to achieve efficiency in both the institution and the home. The chapters include every aspect of domestic craftsmanship, from the choice of a house (with which the book opens) to the correct method of drawing a cheque in the last chapter, and ranges over the kitchen, the work of servants, the best methods of cleaning, polishing, bed-making and so forth, the care of linen, brushes, sponges, china, furniture, &c., with many useful and well tried formulae to assist in these processes. We wish that some of these chapters—notably the one in which the right method of "laying a fire" is demonstrated—might be included in the outfit of every "domestic worker" when first setting forth in her occupation, to prevent her from becoming hopelessly extravagant and slovenly with the repetition of wrong methods.

Germania contra Mundum. By the EARL OF CROMER. (3d. Macmillan.)

Even the ablest and most eloquent of our statesmen and publicists, historians, and men of letters, in expounding the case of Great Britain and her Allies, must now be handicapped by the conviction that he is preaching to the converted. There have been amongst us, doubtless, waverers and Laodiceans, but, except for a handful of professional paradoxists and cranks, there are no pacifists left, thanks, in no small measure, to the full, clear, and frank presentment of our case by statesmen like Sir Edward Grey and Lord Bryce and historians like Mr. J. W. Headlam and Dr. Holland Rose. Among them, in the first rank, stands Lord Cromer. A soldier by profession, for a quarter of a century our Proconsul in Egypt, it was only after his retirement that he revealed himself as a man of letters. The present writer well remembers listening to his address as President of the Classical Association in 1910 on "Imperialism Ancient and Modern," and the comment of the late S. H. Butcher as they left the hall together: "I know no other man in England who could have written that address." The present pamphlet is slighter and more ephemeral, but it was worth reprinting from the *Spectator*. The point he presses home is that the enemy to be subdued is not Militarism, but Kaiserism. No peace can be lasting which leaves Germany with a sham constitution and an absolute War Lord at the head. The form that this constitutional revolution shall take must be left for the Germans themselves to determine; but no peace must be made till the Allies have obtained adequate guarantees that the reforms in government are genuine and will be observed. We confess that such a consummation, however desirable, appears to us hardly possible to attain, and hope that Lord Cromer will expound more fully this part of his thesis. Of the internal politics of Germany he professes only to know at second hand, but of German mendacity and the venality of the German press he has had some experience in Egypt.

The Great World War: A History. By ERNEST A. VIZETELLY, DAVID HANNAY, CLAUDE GRAHAME WHITE, HARRY HARPER, EDWIN SHARPE GREW, and others. Edited by FRANK A. MUMBY. Twelve Parts. (2s. 6d. net each.)

The editor has now completed two-thirds of his arduous undertaking, a task which becomes more complicated and difficult as the war proceeds. Who could have foreseen a year ago the scale on which any history must be written, and the most sanguine of us could hardly hope to see it completed in twelve parts on the liberal scale that Mr. Mumby allowed himself. "Quae regio in terris nostri non plena laboris?" is no rhetorical question, and a modern Virgil would need a second *Aeneid*. There are many rivals in the field, and the *Times* and the *Manchester Guardian* are keen competitors, but for typography, cartography, and photographic reproduction we should award the meed to *The Great World War*.

The Literary Man's New Testament. By W. L. COURTNEY. (10s. 6d. net. Chapman & Hall.)

Dr. Courtney's earlier volume, *The Literary Man's Bible*, was concerned with the Old Testament. The subject of the present volume is the New Testament, which is printed in the chronological order of its writings, the Johannine literature coming last, the Epistle of St. James first, while the Synoptic Gospels follow the Pauline Epistles. Six excellent introductory essays sketch for the reader the main problems with which criticism is at present most vitally concerned; and a brief account of the circumstances under which each book was written stands at the opening of the different sections

of the text. A useful and not too lengthy bibliography is given in the preface. Dr. Courtney reminds us of his purpose in the following words: "The book is not intended for the theological student as such, it is intended for a student of literature and history. . . . My immediate purpose is to outline the growth of a creed, not to evolve all the meanings and implications of dogma." The problems of modern criticism, as the third introductory essay points out, are not those which mainly interested scholars last century. Then the burning questions were those of authorship, authenticity, genuineness. Now the contents of the writings command attention rather than the external circumstances of their composition. This implies that "the real problem is to discover whether Christianity was or was not a syncretistic religion." Such a progress of criticism is both natural and inevitable. Criticism began with the documents of the Old Testament, and then passed to the documents of the New Testament. There are those who would fain stay its advance at that point, and exclude the Creeds from its purview. But Canute cannot arrest the rising tide. And, surely, what is of vital import is the system of ideas, the thought of the New Testament. The Church of England claims that its doctrine is based on Scripture. If you investigate the foundation, you cannot reasonably be expected not to investigate the superstructure. The growth of comparative religion alone renders necessary such a critical examination of doctrine. How much colour did Christianity take from its successive environments? It is essentially assimilative. What is its relation to other systems of belief? Those are the questions which the present century will have to ask and answer. One of the most important discoveries of recent years relates to the language of the New Testament. The second essay deals with this, and points out that we are compelled to abandon the older belief that New Testament Greek stood in a class by itself. We know now, thanks to the discovery of inscriptions and papyri, that the language of the New Testament belongs to the *koiné*, or common Greek, which was in general use in the eastern parts of the Roman Empire. "It was the language of the common people, more conversational than literary, too widely spread to be a patois, but representing the idioms of ordinary people, and, of course, very inferior to chiselled Attic prose. The nearest analogy probably is the way in which English is spoken—and not very correct English either—in different portions of the British Empire." While not agreeing with all the author's conclusions, we can cordially recommend this book, which goes to the heart of the matters in dispute. On page xxiii of the Introduction the vulgar error, "Revelations" for Apocalypse is doubtless a misprint.

Methods and Aims in the Study of Literature. By LANE COOPER. (5s. net. Ginn.)

This is a series of extracts and illustrations arranged and adapted by the Professor of English Language and Literature at Cornell University. Its author disclaims all competition with systematic work on method. It is the result of experience in teaching classes in literature, and in particular in poetry. The first chapter is devoted to method in general and takes account of science and art as well as literature, in which plan Prof. Cooper has been anticipated by our own Prof. Findlay. The second chapter deals with literature specially, and is followed in the third by a series of extracts from Wordsworth's letters on the study and practice of poetry. The fourth chapter is made up of a most useful set of illustrations of the practice of great writers in composing. Chapter V is given over to studies of poets, while Chapter VI deals with the attractive subject of method in the poetry of love—with illustrations. Except for some half dozen quotations from his own writings, Prof. Cooper has made up his 224 pages by extracts, so his work must be judged by his skill in selecting and arranging his material and supplying the necessary connective tissue. Judged by this test the book must be accounted a clear success. The teacher of a higher form in school or a pass class at a University will find here just the sort of material needed for use by the pupils. Practically all the extracts come from writers whose claims to attention cannot be questioned. The book is free from that taint of "books about books" that damages so many of the treatises prepared for students. It is made up of substantive literature. Sins of omission in a work of this kind have to be leniently dealt with. We do not complain of the omission of Poe's famous analysis of his method of poetical composition. We merely wonder why the omission occurs. We hope it is because Prof. Cooper cannot accept the analysis as sincere.

Notes on English Literature. By WILLIAM EDWARDS. Part I: *From Skelton to Shakespeare.* (3s. net. Rivingtons.)

Every line of this well arranged little volume indicates the hand of the experienced teacher. The subject-matter is classified on a broad basis, and the many illustrative passages quoted prevent any suggestion of a catalogue. Where so many headings are given, it is but natural that some should seem unnecessary and some unfruitful,

e.g. "There is no Epic or Dramatic Poetry in the Bible." The section on Shakespeare is admirable, and would well serve as an introduction to a thorough study of Elizabethan dramatic literature. References to cheap editions of standard works and to good textbooks add to the value of this book, which may be specially recommended as a guide to students preparing for University examinations.

The Lay of Havelok the Dane. Re-edited from MS. Laud Misc. 108 in the Bodleian Library, Oxford, by the Rev. W. W. SKEAT. Second edition. Revised by K. SISAM. (4s. 6d. Oxford University Press.)

Since Skeat's edition of Havelok (Clarendon Press) appeared, much important work has been done on the poem, notably by Deutschbein, Heyman and Holthausen, and Skeat himself in 1911 discovered at Cambridge some fragments of a Havelok MS, which he published in the *Modern Language Review* (vi, 455). The time had therefore come for his edition to be revised and the results of recent researches to be utilized. The new edition which is now before us proves that the task of revision was entrusted to a competent scholar who has made good and judicious use of the available material. Mr. Sisam has in the main followed the plan of the first edition, but he has rearranged the introduction, and the new arrangement seems to us an improvement. Everything important in the first edition has been retained, while the results arrived at by the scholars who have investigated the various phases of the story are concisely summarized and incorporated. We accordingly have a full and compact statement of what is up to now known of Havelok. One cannot help regretting that Mr. Sisam did not devote some space to a valuation of Havelok as a literary work. The paragraphs on Metre and Rimes are especially clear, but in that on Phonology (Section 20) there are one or two discrepancies that doubtless have escaped detection: Section 20 (1), page xxx, line 4, long close o is apparently meant, and not long open o; Section 20 (3), "open ô" should be either "open ô" or simply "ô." Mr. Sisam, in Section 20 (4), apparently uses *close* and *open* as applied to vowels in the sense of *tense* or *narrow* and *slack* or *wide* respectively; the use in Section 20 (3) of "law" to illustrate the Middle English long open o would therefore be wrong, for "law" has a tense or narrow vowel. The notes in the new edition are mainly Mr. Sisam's; the vocabulary has also been revised and is somewhat fuller than in the first edition. The Cambridge Fragments are printed at the end of the text, and the facsimile of lines 632 to 653 and the frontispiece representing the Seal of Great Grimsby are again reproduced.

(1) *Indian Myth and Legend.* By DONALD A. MACKENZIE.
(2) *Egyptian Myth and Legend.* By the same Author. (Each 7s. 6d. net. Gresham Publishing Company.)

These two concluding volumes of the series dealing with less familiar peoples cannot vie in popularity with the first two, which deal with Greece and Rome and Celtic races. Indian myth and legend is a vast quarry which has been industriously explored and worked since the days of Sir William Jones. "The *Rāmāyana* is three times longer than the *Iliad*, and the *Mahābharata* is four times longer than the *Rāmāyana*, and the story of these two epics is more or less familiar to two hundred million Hindus. To know a people we must know its myths, and not only the young *wallah*, but all who are interested in India—and who is not?—will find this volume a pleasant introduction to the study. Thus the first story, of Savitri, is as beautiful in its way as that of the Greek *Alkestis*. On the "great Aryan question" the author has no views of his own to propound, and is content to indicate the contending theories of recent ethnologists and philologists. So too of the origins of mythology he has little to say, and we cannot help wishing that he had here followed in Max Müller's tracks, while avoiding his peculiar paradoxes. Egyptian mythology is, in Shakespearean phrase, "a wilderness of monkeys," or, as Juvenal knew the country, "a cabbage garden of deities," and Egyptian records are singularly lacking in poetic imagination. Yet Egypt is a factor in civilization that can no more be neglected than Babylonia or Palestine. The history of early Egypt is fully dealt with, especially in its connexion with Jewish history and Palestine; but when the leading authorities differ by more than two thousand years as to the date of Mene's conquest, much of it must still be regarded as mythical. The illustrations are well chosen and well reproduced. We wish the author had supplied references to his authorities and made more use of the researches of Sir George Maspero. The grammar is sometimes faulty—"Practical jokes and rowdiness is still prevalent"; "The development of religious ideas followed different lines, and were similarly controlled."

Judson, the Hero of Burmah. By JESSE PAGE. (2s. 6d. Seeley.)

The story of Adoniram Judson, the first Christian missionary to the Burmese, has been told in full by his son, and is here retold in

brief for boys and girls. It is, indeed, a narrative of faith that moves mountains and indomitable courage, but it loses something in the telling by a style overloaded with metaphor, and occasionally incorrect: "He needed sorely a wise, cheerful friend who could help him to shake off both the dreams of ambition and the dol-drum of melancholy, and such friends in need and deed were not commonly grown in those days—at any rate, they did not flower with much colour or refreshing fragrance."

Spindrift: Salt from the Ocean of English Prose. Edited by GEOFFREY CALLENDER, M.A. (Cambridge University Press.)

This anthology, which stretches from Wycliffe to Froude, differs from its too numerous predecessors in that it is confined to one theme—viz., "to show how the masters of English prose have been affected by the sea." The short well written preface shows the compiler to be a true sea lover, and makes one regret he has not commented at greater length on sea literature. The extracts have been taken from every branch of prose literature, and the selection shows discrimination and knowledge. A book of this character, at a time like the present, when English daring and resourcefulness on the sea rival the glorious achievements of the past, is certain of a wide and hearty welcome.

The Lord of the Isles. Edited by Rev. F. MARSHALL. (1s. 6d. Gill.)

A full introduction which tells the story of the poem, discusses the characters presented, describes the battle of Bannockburn in detail, and gives a life of the author, is typical of the thoroughness of Mr. Marshall's editing. His notes are historical and geographical, with maps and diagrams, and he gives a glossary as well as side explanations on each page. The book well fulfils its purpose of preparing for examinations, but we doubt whether the many wrappings will endear the poem to the youthful reader.

A Gypsy Bibliography. By GEORGE F. BLACK. (15s. Quaritch.)

This is the first monograph issued by the Gypsy Lore Society, and of itself justifies its existence. Of its completeness we cannot pretend to judge, but can say that there is nothing in the field on the same scale. Borrow (George) occupies seven and a-half columns, and we find all the novels and poems that occurred to us at the moment referring to gypsies duly recorded, e.g. George Eliot, Victor Hugo, Freytag, Sir Walter Scott, Watts Dunton.

"Oxford Garlands"—(1) *Elegies and Epitaphs.* (2) *Modern Lays and Ballads.* Compiled by R. M. LEONARD. (Each 7d. net. Humphrey Milford.)

There is no falling off in the two latest volumes of this attractive series, and the subjects will interest a wider public than did some we have before noticed. (1) The editor must have been perplexed by an *embarras du choix*, and every reader will miss some of his special favourites. Matthew Arnold, Ben Jonson, Landor head the list of authors, with five poems assigned to each. Gray's *Elegy* might well be omitted as "common form," to make room for the *Epitaph on a Jacobite*, the most perfect of Macaulay's poems, and *Cold in the Grave*, the most poignant of Emily Brontë's. A few, too, like Burns's *On a Country Laird*, are epigrams, not epitaphs. We are grateful for Whitman's two tributes to Lincoln. (2) The Ballads range in time from Cowper to the present Laureate, represented by his *Screaming Tarn*. Considerations of length and copyright have limited the selection. We have Swinburne's masterly *Bride's Tragedy*, but nothing of Rossetti, the prince of modern balladists.

Blackie's New Systematic English Readers. (Third Reader, 1s. 2d.; Fourth Reader, 1s. 5d.; Fifth Reader, 1s. 7d. Blackie.)

The selection of pieces in these volumes shows discrimination and literary taste. Exercises at the end can be made use of, and the illustrations are particularly good. They are one of the best sets of readers we have seen, and can be unhesitatingly recommended.

Outlines of Composition and Rhetoric. By J. F. GENUNG and C. L. HANSON. (4s. 6d. Ginn.)

The fact that this book contains many Americanisms and that the exercises are largely based upon the customs and conditions of life in America makes it not altogether suitable for use in Great Britain. The theoretical parts are clearly written and stimulating, particularly the paragraphs on the use of "shall" and "will"; the exercises are on the whole practical and calculated to arouse the interest of the pupils. We think it undesirable, however, to set exercises in which the pupils are required to correct mistakes in the use of words and idioms. In a large number of cases the wrong use would not occur to the pupils' minds if attention were not drawn to it. Such exercises, therefore, tend to create confusion and to produce results different from those aimed at. The book is in many ways an improvement on other similar books, and, with the reservations mentioned above, is well adapted for the purpose it has in view.

The Works of Man. By L. M. PHILLIPPS. (7s. 6d. net. Duckworth.)

The title is unfortunate, since it gives no indication as to whether the works are scientific, artistic, industrial, or mechanical. Mr. Phillipps discourses chiefly on architecture and sculpture, with a chapter at the conclusion on Italian painting and one on French furniture. He considers art as an expression of human life and character, and traces the similarities between the qualities of various races and their works in stone. Egyptian art is barren of intellectual insight and intellectual interest, he says, and he shows with skill what an influence the Nile exerted. With the Greeks "the Doric temple is æsthetic enough to be ethical," and the sense of sight has a persuasion which surpasses even the power of reason. The Greeks recognized this, and their works give lessons of truth and beauty through the eye. Santa Sophia is designated "the last word in classic architecture," and regarded as the Greek comment on Roman architecture, showing the full power and beauty of the arch principle. The Arab character of nervous, passionate energy, with its lack of tenacity and endurance, is reflected in the concrete forms of their architecture in its looseness and want of constructive instinct. The Gothic, however, is a style which also exhibits the characteristic of energy, but it is combined with strength, harmony, and purpose. At the Renaissance the Greek spirit re-emerges, but it is now tinged with spiritual emotion. This art is restless and experimental where the Greek was serene and confident; the sculpture of the moderns depicts the struggle between matter and spirit. Mr. Phillipps writes in a picturesque style that sometimes rises into passages of real eloquence and beauty. Many philosophical reflections, some platitudinous, are scattered through his pages, and those who wish for a view of architecture through the ages will find this volume of use and interest. The illustrations are excellent, and the remarks explanatory of their particular significance are illuminating and to the point.

ANNUALS.

Hazell's Annual, 1916 (3s. 6d. net), is up to date in both senses of the word. It was published before the end of the year, and it carries us down to the beginning of December. The War has a chapter of over twenty pages, besides numerous sections under "Colonies," "Aviation," "Roll of Honour." The total number of pages is considerably less than in 1915, and Education naturally suffers. Thus there is no mention of the Teachers' Registration Council.

Who's Who, 1916 (15s. net, Black), *vires acquirit eundo*. It now runs to 2,451 pages, an increase of 75 pages on last year, and the increase of 1½ pages in the "Obituary" is a sad memento of the times. Of some names we wonder how "they got there," and a few, like Rupert Brooke, have leapt into sudden fame at their death; otherwise hardly a celebrity in any walk of life is absent. The *Who's Who Yearbook* and the *Writers' and Artists' Yearbook* (each 1s. net) are almost indispensable companion volumes.

Englishwoman's Yearbook and Directory, 1916. (2s. 6d. net. Black.)

The section on sports and games has been dropped, and a valuable appendix on work for women in war time takes its place. More care might have been exercised in bringing Section 1, Education, up to date. Few women are likely this year to go to Nääs, and still fewer to Leipzig to learn Sloyd; the Dalcroze Institute for Eurhythmics, which offers a new opening for teachers, deserved notice. The women representatives on the Registration Council should certainly appear. The Institute of Linguists is long defunct and the address of the Teachers' Guild is no longer 74 Gower Street.

ERRATUM.—The price of *Life of Shakespeare* by Sir Sidney Lee (Smith, Elder) is 8s. 6d. net, not, as given in our review, 18s. 6d.

COLONIAL AND FOREIGN NOTES.

UNITED STATES.

Is the salary of the English teacher rising in proportion to the fall in the buying power of money? We think not; but we confine ourselves here to the United States. Bulletin 31, issued last year by the Bureau of Education, studies the salaries of teachers comparatively. It is found that, owing to the increased cost of living, a stipend of 1,000 dollars in the decade of years since 1904 would have in 1913 a purchasing power equivalent only to 836.12 dollars. In general,

Teachers' Salaries.

however, there has been in the cities some improvement in salary conditions. A comparison between the figures of 1904 and 1913 shows that the average advance in salaries for the cities considered was between 24 and 28 per cent., a greater rate of advance accordingly than that of the cost of living. Full statistical tables are given in the Bulletin, which lays down that School Boards have a right to expect increased efficiency for increased salaries, even if these be granted as a simple act of justice. Usually they will get it. In these days of a general tendency to "economy" in education it may be proper to remark that education is the last thing in the world that wise men would try to buy cheap.

The Scouting movement makes progress in America. It is the subject of an article in the *Educational Review* for December (L, 5). The "Boy Scouts of America" were organized February 10, 1910.

Boy Scouts.

Before that Dan Beard, seeking to glorify the pioneers and the hardy virtues of the wilderness, had founded the order of "The Sons of Daniel Boone," and Thompson-Seton, to draw city boys into the open air, had enrolled his "Woodcraft Indians." Now more than 7,000 approved scout-masters are registered at the headquarters of the order in New York City, the number of boy scouts exceeds 143,000, and the magazine, *Boy Life*, written specially for them, has a circulation of about 40,000 copies. At headquarters there is a committee whose function it is to examine all sorts of boys' books and to certify those which are likely to prove wholesome and helpful. Although the military idea has been retained in organization and in external forms, the scouts are really young citizens in uniform and the virtues inculcated in them, courage, truthfulness, friendship, kindness, and thrift, are civic virtues. The difficulty in the way of the movement in the United States is that unpaid scout masters cannot be got in sufficient numbers. The writer of the article would introduce the organization into the schools:—"The school could well afford to give Friday afternoon in the two upper grades of the elementary school and the two first years of the high school to Scouting and to the Camp Fire Girls."

At the seventeenth Annual Meeting of the Association of American Universities a "Conference of Deans and similar Officers of Graduate Schools" discussed certain questions relating to degrees. Thus it was asked

Of Degrees.

whether appropriate degrees should be devised for those students who have absolved some newly organized course of study—e.g. in forestry, public health, or architecture, or whether existing degrees should be used to cover the new distinctions. A committee was appointed to weigh the matter and to report on a future occasion. In the interest of the British public we deprecate any increase in the number of alphabetical problems that can be appended to the names of persons. Another question related to the degree of Master of Arts. It was the general opinion of the Deans and similar Officers that at least one year of resident graduate study should be demanded of every candidate for this degree. Numerous institutions allow attendance at a summer session to count towards the period of residence that is required, and a majority of representatives at the Conference approved the acceptance of five consecutive summer sessions of six weeks each as an equivalent for the thirty-six weeks of the academic year. The Associated Universities will settle their own affairs. Our wish for Britain is that degrees should be recognized as what they are—not hall-marks of learning, but counters indicative of academic standing in the several faculties—the value of which should be readily ascertainable by those whom they are designed to impress.

Vocational guidance is a topic to which duty compels us ever and again to return. The *School Review* (XXIII, 10) prints a useful article on "School Phases of Vocational Guidance." Amongst other things,

Vocational Guidance.

the writer indicates the value of co-operation between the school on the one hand and employers or employment agencies on the other. The school system of Lincoln, Nebraska, has established an "Efficiency List," which is open to the inspection of the employers in the town. The Department of Public Instruction, Rochester, New York, has issued circulars on the subject. Boys and girls under sixteen, it is pointed out, leave school and often remain in dangerous idleness for months; the aim should be to keep them at school, following vocational courses until some suitable post is vacant. Already seventy-seven boys and girls have been induced to return to school. The Education Authority recommends to employers fit young persons; employers bind themselves to engage only those so recommended. For the assistance of teachers who would give vocational guidance to high-school pupils, the following books are recommended in the article:—Davis, *Vocational and Moral Guidance* (Ginn & Co.); Bloomfield, *Youth, School, and Vocation* (Houghton Mifflin Co.); Parsons, *Choosing a Vocation* (Houghton Mifflin Co.); Weaver, *Profitable Vocations for Boys* (A. S. Barnes Co.); Weaver,

Profitable Vocations for Girls (A. S. Barnes Co.); Tolman, *Hygiene for the Worker* (American Book Co.); and William De Witt Hyde, Editor, *Vocations*, 10 vols. (Hall & Locke Co.).

FRANCE.

The War is conceived in France, with ever-growing conviction, as a clash of cultures. To-day the question is of the future diffusion of French culture—how the French mentality may be made to radiate with wider effect. That, when the War is over, German culture will be more attractive than hitherto will hardly be contended even in Germany. Meanwhile, the French journals publish statistics which prove that, except for countries (Austria-Hungary and Switzerland) in which German is the language of a large part of the inhabitants, even before the War the French Universities drew more foreigners to them than the German. On January 1, 1914, there were 6,192 matriculated foreign students in the French Academies as against 5,015 in the German, the numbers and nationalities of the European students being these:

	France.	Germany.
English	223	85
Austro-Hungarians.....	133	783
Belgians	31	6
Bulgarians	291	96
Scandinavians	30	34
Spaniards	45	23
Greeks	134	48
Dutch	21	25
Italians	155	28
Luxembourgeois.....	55	45
Turks	313	46
Portuguese	28	14
Roumanians	459	223
Russians	3,176	1,403
Serbs and Montenegrins	108	58
Swiss	86	295

French culture is a Latin culture, and there are many to-day who wish that not Romanism but Hellenism had come to Western Europe. Yet the mind of France has a strangely awakening power. Even in the heat of the conflict the terms on which the French Universities will help in yielding that inspiration to foreigners are being regulated. A decree relevant to the matter is published in the *Bulletin Administratif du Ministère de l'Instruction publique*, No. 2201. Students of foreign nationality, it lays down, may inscribe themselves in the French Universities if they have obtained, as an equivalent to the *baccalauréat de l'enseignement secondaire*, the certificates that would in their own country procure them admission to places of higher education. The list of such certificates is drawn up from year to year by the Minister of Public Instruction. With the certificates will have to be submitted some proof of identity (a birth certificate or certificate of baptism, for example), and the documents will have to be *visé* by a French consul or diplomatic agent in the country of the student's origin, or by an accredited agent of that country in France. A wholesale exchange of students between Britain and France is the best conceivable means of promoting the close intimacy of the nations to which desire has long been tending, and which Fate has made inevitable. The War of Cultures cannot end with the War of Arms, and we must infuse into our own culture all that we can get from that of France.

By the death of Michel Bréal, towards the close of last year, Education, and, in particular, the Société d'enseignement secondaire sustained a grievous loss. On leaving the Ecole normale supérieure,

M. Bréal taught for some time in *lycées*. Then he concentrated his attention on linguistic studies and comparative mythology. In 1871, from notes made during journeys abroad, he composed the work modestly entitled "Quelques notes sur l'Instruction publique en France," which had much influence upon public education; whilst, in witness to his faith in private initiative and experiment, he joined the group that founded l'Ecole Alsacienne, and he took part—the education of girls interesting him as much as that of boys—in the establishment of the Collège Sévigné. With collaborators he compiled his "Grammaire latine," his "Mots latins et grecs," and his "Dictionnaire étymologique du latin." Jules Ferry gave him one of the places on the Conseil supérieur that the law left to be filled by the Ministry; but in 1896 a Minister, about to attack those classical humanities that M. Bréal defended, erased his name from the list of members. What Duruy did for French education is well known; the mission of Michel Bréal was to uphold and develop the conceptions of Duruy.

INDIA.

Upon considering the Report on the Administration of Jails in the Madras Presidency for the year 1914, the Government finds that good progress has been made with the imparting of elementary education to convicts in the first-class central jails, and in the second-class central jails at Salem. "Moral and religious lectures," it is stated, "were delivered to the convicts by respectable gentlemen appointed for the purpose." The success of the experiment of educating prisoners has caused the Governor in Council to set forth a desire that instruction should be given in all central and district jails, with increased and improved staffs of "respectable gentlemen" appointed to lecture the convicts. But is it not the policy of an Epimetheus to educate the condemned? Prometheus would have had them educated to escape condemnation.

Indian Education (XIV, 4) publishes some pleasant specimens of the answers sent up by candidates who were asked in an examination to draft an application for a Government clerkship. Wrote one: "I hope to satisfy you with the work, and will discharge no stones in my duties," meaning that he would leave no stone unturned, &c. Another recommended himself thus: "Now I am seventeen years old, tall, strong, with equine nose, brilliant eyes, and open forehead"; whilst a third stated as a proof of attainment the fact that he had failed to pass the Matriculation examination! The young rascal who ended his application with the piteous appeal—"I have got wife and two children; they are dying of hunger"—was either a born liar or a wag.

Humours of Examination.

Bilingual Teachers.

CAPE OF GOOD HOPE.

The Cape of Good Hope has from time to time experienced a difficulty in getting qualified teachers. Bilingual teachers are desirable in the local conditions; but to insist that all teachers must speak Dutch as well as English is not the way to increase the supply. Recently, when he was laying the foundation stone of the new building for the Paarl Training School, the Administrator said that the question had also to be considered whether in future all students trained would not have to qualify as bilingual teachers. With this end in view it might be necessary to give greater assistance to students under training, and the possibility of making loans in order to assist them in completing their professional course would probably have to be faced. If such a plan were followed the loans would have to be repaid when the students became teachers, and, as at present, the condition would have to be imposed that such teachers should undertake teaching work in the Province of the Cape of Good Hope.

UNIVERSITIES AND SCHOOLS.

WALES.

The Welsh Department has already issued its annual pamphlet on "Patriotism," and, as in former years, it is tastefully designed and admirably suited for its purpose of impressing upon the Welsh boy or girl the need of cultivating love of country. There is, of course, a special significance in this kind of teaching at this time of crisis and trial, and the Department's action is therefore to be strongly commended, and no doubt all Welsh schools will make full use of the suggestions and incidents contained in the booklet. It is designed specially for St. David's Day, but we see no reason why the teaching of civics and patriotism and all that these terms connote should be limited to a single day in the year, even though it be a national Saint's day, as pamphlets of this character might, with great advantage, be used continually as supplementary to the ordinary literature or history lesson. The recently published anthologies *Land of My Fathers* and *Hen Wlad y Rhodau*, under the editorships of Profs. Morris Jones and Lewis Jones (in aid of funds for the Welsh troops), for instance, contain such excellent specimens of Welsh literature, and are so replete with stirring historical incidents, that they might easily be made extremely useful as school textbooks. The Welsh history of the ordinary textbook is generally very dull and uninspiring, and is apt to degenerate into descriptions of what many boys regard as mere faction fights of very little interest or importance. But by means of booklets of the type we have just mentioned, it is possible, we believe, to infuse a new life into the teaching and make it really inspiring and educational.

We congratulate Sir O. M. Edwards on receiving the honour of knighthood. His services to Wales, in literature and in education, have been so great that to many it is surprising that he has not been the recipient of some recognition of them long before now. For no one has done more for the spread of knowledge of the Welsh classics, as his editions of the Welsh poets and writers are widely known throughout the Principality, and as editor of *Cymru* he has done inestimable service to Welsh literature and antiquities. The University of Wales has often been criticized because it has not thought fit to confer upon him an honorary degree. As Chief Inspector under the Welsh Department he has, of course, become a very important factor in our Welsh education system, and, though some of his reports have been rather strongly criticized, it is yet true that he has already effected several valuable improvements in the work of the schools, and especially in that of the primary schools.

SCOTLAND.

Glasgow. Mr. James Moir, LL.D., Professor of Conveyancing in the University, died suddenly on December 31. He was appointed to the Chair in 1889. He was an able teacher of his subject, and his lectures were highly valued by his students. Mr. Peter Brock, Cambuslang, has made a donation of £4,000 to the University for the foundation of a fund, the income of which is to be applied at the discretion of the University Court to some University purpose. Prof. W. R. Scott, F.B.A., has been appointed to deliver the Jevons Memorial Lectures at University College, London, during the session 1916-17.

Aberdeen. Mr. George Smith, LL.D., Director of Studies under the Aberdeen Provincial Committee, has been appointed by the General Council to be one of its assessors on the University Court. A lectureship in Celtic Literature and Philology has been founded, and the Court has appointed Mr. John Fraser, M.A., to be the first Lecturer. Sir Alexander McRobert has given to the University an endowment for a lectureship in Pathology, with special reference to malignant diseases. The lectureship will be attached to the Department of Pathology, and the income of the endowment is expected to amount to about £750 a year.

The number of students of the University now on service is 1,597. The number of graduates on service is 979, and of alumni 130.

Edinburgh. The Ordinance of the University Court, instituting a degree in education (to which reference was made in these notes in December last) has been withdrawn, in order that amendments may be made on lines suggested by the Glasgow University Court. It is hoped that Ordinances, similar in their main provisions, may be promoted by each of the two Universities. The report of the University for 1915 states that during the year the total number of matriculated students (including 487 women—59 less than in the previous year) was 1,853, being 676 fewer than in 1914 and 1,408 fewer than in 1913. There were 770 students (including 436 women) in the Faculty of Arts (a decrease of 276 on the figure for 1914), and 807 (including 11 women) in the Faculty of Medicine (a decrease of 218). There were also large reductions in the numbers of other Faculties. The University Roll of War Service which, at the end of 1914 contained about 1,700 names, now includes about 4,000.

IRELAND.

Another of the Senior Fellows of Trinity College has passed away, Dr. Benjamin Williamson, who died on January 3, at the age of eighty-nine. Dr. Williamson had been a Fellow of the University for sixty-four years; in 1884 he was appointed Professor of Natural Philosophy, and on the resignation of the Rev. John Barlow he became Vice-Provost. He was the author of several works on mathematical subjects and a frequent contributor to scientific journals. He was an honorary D.Sc. of his own University and received from Oxford the degree of D.C.L. in 1892; in 1879 he was elected a Fellow of the Royal Society. In private life he was one of the most amiable of men and a lover of flowers; the College park and Fellows' garden owed much to the latter trait in his personality.

The Senate of the National University met on January 11 to elect members of the Governing Bodies of the Constituent Colleges for the statutory period of three years from January 31, 1916.

A new edition of the *Roll of Honour* of Queen's University, Belfast, has just been issued, giving a full account of the public work done by members of the University, both at the Front and at home. Eight have received the Military Cross, thirty-one have been mentioned in despatches, and twenty-four have lost their

lives in service. Two have lately gone to the East to put into use at the seat of war a new bactericide, the discovery of one of them.

The suspension of grants for Irish education has called forth vigorous protests. The Conference of Irish Colleges has sent out a statement dealing with the intention of the Department to suspend provision for teachers' classes from February 29, 1916. During the past twelve years fourteen colleges have been founded, attended since their establishment by an aggregate of over 13,000 students, the annual attendance during the past two years being over 1,500. The majority of these students were teachers in primary and secondary schools. As the training colleges under the National Board make no adequate provision for teaching Irish, the work of the Irish colleges is absolutely necessary to secure a supply of qualified teachers of the language; and the grants earned of late years from the Department were of very material assistance, enabling the colleges to reduce their fees to students and to remunerate their professors, many of whom had hitherto given their services free. The suspension of the grant in the middle of a session, when the colleges are involved in obligations which they undertook in expectation of it, constitutes an additional hardship. Strongly worded protests have been sent in by the Mansion House Conference on the teaching of Irish, the Academic Council of University College, Galway, the Standing Committee of the Roman Catholic Hierarchy at their meeting on January 18, and some of the Provincial Councils. A public meeting which was held under the auspices of the Gaelic League in the Mansion House, on the evening of January 17, was filled to overflowing, and there could be no doubt that both speakers and audience were in earnest.

The Commissioners of National Education have just inaugurated a new scheme in the Belfast primary schools, which it is hoped may help to raise the standard of education generally in Belfast. At present, owing to the practice of sending children to work as soon as they have reached the age of fourteen, a large number of them (especially boys) leave school before they have reaped all its advantages. In the year 1912-13 only 2.5 per cent. of Belfast children reached the sixth standard, compared with an average of 5.8 per cent. for the whole of Ireland; only 1.1 per cent. reached the seventh, as against 2.6 per cent. for the rest of Ireland. The Commissioners propose to establish a Committee of eight principal teachers, who, with the co-operation of the teachers of the City,

will conduct examinations under supervision of the Senior Inspector and will issue a "Higher Grade Certificate" to children who have attended at least one year in the sixth or higher standards. It is intended that this certificate shall be regarded as a proof of efficiency and give its possessor preference with employers. The Examining Committee hope to induce the Technical Instruction Committee of the Belfast Corporation to accept the certificate as an equivalent for the entrance examinations for technical classes, so that its holders may pass direct from the National school to the trade and technical classes; in this way it is hoped to co-ordinate primary education with that of the Technical Institute and later with the science courses of the Queen's University, thus providing an educational ladder for clever and enterprising boys.

PRIZE COMPETITIONS.

The Translation Prize for January is awarded to "Hogun."

The winner of the Translation Prize for December is Miss Ethel M. Dale, 27 Heathville Road, Crouch Hill, N.

Une heure après, toujours par le sentier tortueux de la falaise, j'approchais du Bourg-d'Ault, but principal de ma course. A un détour du sentier, je me suis trouvé tout à coup dans un champ de blé situé sur le haut de la falaise et qu'on achevait de moissonner. Comme les fleurs d'avril sont venues en juin cette année, les épis de juillet se coupent en septembre. Mais mon champ était délicieux, tout petit, tout étroit, tout escarpé, bordé de haies et portant à son sommet l'océan. Te figures-tu cela? vingt perches de terre pour base, et l'océan posé dessus. Au rez-de-chaussée des faucheurs, des glaneuses, de bons paysans tranquilles occupés à engerber leur blé, au premier étage la mer, et tout en haut, sur le toit, une douzaine de bateaux pêcheurs à l'ancre et jetant leurs filets. Je n'ai jamais vu de jeu de la perspective qui fût plus étrange. Les gerbes faites étaient posées debout sur le sol, si bien que pour le regard leur tête blonde entraînait dans le bleu de la mer. A la ligne extrême

DUSMO

The Dustless Sweeping Powder

DUST in your SCHOOL is the CARRIER of
DISEASE which may ATTACK those least able
to resist it. You can REMOVE this
DANGER by the use of DUSMO when sweeping.

A line of DUSMO laid down and swept before the broom will prevent dust rising, and so dry scour the floor as to render wet scrubbing a quite unnecessary expense.

Copy of Letter recently received from a well known College:—
"We have completed a period during which DUSMO has been severely tested, and I am now convinced of its efficacy, although I was at first sceptical as to its merits. You will need no better testimonial than the accompanying order for six more bags."

Use DUSMO and effect
great economy in your cleaning
bill for 1916, and you will also
have a CLEAN BILL OF HEALTH.

DUSMO Co., Ltd., 11 Queen Victoria St.,
London, E.C.

"A Sweeping .
Assertion."
**KILLS DUST . . .
AND GERMS.**

A LIFE OF WILLIAM SHAKESPEARE

By SIR SIDNEY LEE, D.Litt.

New Edition, mostly rewritten and greatly enlarged.
With Portraits and Facsimiles.

Small demy 8vo. **8s. 6d.** net. Postage 6d.

"This scholarly and luminous monograph . . . represents the last word in the elucidation of the genius of Shakespeare and of the complicated and in many cases obscure problems which gather round his personality and work."—*Standard*.

"It is impossible to do justice to this new edition in an exiguous review. So wonderful a record of unwearied scholarship, free of superfluous pedantry, is a beacon and example to an age inclined to flout learning, and demand, not disinterested inquiry, but potted results."—*Nation*.

DIDASCALUS PATIENS: A Satire, a Medley, a Romance.

By J. H. E. CREES.

Large post 8vo. **6s.** net. Postage 5d.

"Educationists of the most varied shades of opinion will be interested to read this spirited and often eloquent tractate. . . . It is always lively, learned, and briskly controversial. It should interest and help any reader who wishes to understand how the English schoolmaster stands at the present moment."—*Scotsman*.

London: SMITH, ELDER & CO., 15 Waterloo Place, S.W.

X

du champ une pauvre vache insouciant se dessinait paisiblement sur ce fond magnifique. Tout cela était serein et doux, cette églogue faisait bon ménage avec cette épopée. Rien de plus frappant, à mon sens, rien de plus philosophique que ces sillons sous ces vagues, que ces gerbes sous ces navires, que cette moisson sous cette pêche. Hasard singulier qui superposait les uns aux autres, pour faire rêver le passant, les laboureurs de la terre et les laboureurs de l'eau.

Au sortir de ce champ, la scène changeait encore. Le ravin où je marchais se fermait d'un côté, se déchirait brusquement de l'autre, et je ne voyais plus que la terre, la riche terre de Normandie, les plaines à perte de vue que termine un liseré violet, et au loin les têtes rondes des pommiers. Car c'est encore là une de ces harmonies qu'on rencontre partout à chaque pas, le pommier est une pomme. La forme du poirier s'allonge un peu.

By "HOGUN."

An hour later, still following the path along the cliff, I drew near to Bourg-d'Ault, the principal object of my expedition. Suddenly, at a sharp turn of the path, I found myself in a cornfield, lying on the uppermost slope of the cliff, in which the reapers were nearing the end of their task. That year, as the April flowers came in June, the July corn was being cut in September. Still, my field was perfectly charming: very small, very narrow, very steep, enclosed with hedgerows, and bearing on its summit—the ocean. Now! Could you possibly believe it? Twenty rods of earth for foundation, and the ocean for superstructure! On the ground floor reapers, gleaners, honest peasants quietly busy, making their sheaves; on the first floor, the sea; and right up on the roof a dozen fishing boats at anchor, casting their nets. Never have I seen perspective produce a stranger effect. The finished sheaves were so placed, erect upon the ground, that the eye saw their golden heads merging in the blue of the sea. On the extreme boundary-line a poor, unheeding cow stood out a peaceful picture against this magnificent background! How calm and gentle it all was, an idyll in harmony with an epic! Nothing more striking can I conceive, nothing more pregnant with philosophic suggestions than the scene before me—the furrows beneath the waves, the sheaves beneath the ships, the harvest of the land beneath the harvest of the sea. What singular chance thus placed them one

upon the other—to plunge the passer-by in dreams—these toilers of the deep upon these tillers of the land?

On leaving the field the scene changed once more. The ravine along which I was walking, shut in on one side, on the other broke sharply away; and now I saw nothing but the land, the rich land of Normandy, its plains stretching far as the eye could reach, to the strip of violet on the horizon; and in the far distance the apple trees with their rounded heads. For that, too, is one of the harmonies, which here meet your gaze on every side, at each step you take; the apple tree is an apple; the pear tree a slightly elongated pear.

We classify the 114 versions received as follows:—

First Class.—Ardeonaig, Chingleput, P.O.L., Accinctus, Rowsley, Pater, W.O.C., Sursum, Stourport, Hogun, Gothicus, Menevia, Swinford, Nid, Chislehurst.

Second Class.—Emil, P.J.A., Papillon, Booboo, Fantastic, Sparklet, Ben Edar, Talbot, Sirach, Gouda, Blackpit, Newman Noggs, Kim, Viator, Phantom, Montserrat, Tom, H.B.K., Wattle, Beaumont, R.N., Nagaina, E.D.W., Berenguela, Britannicus, Pip, Decima, W.A.W., B.G.T., Nibbidard, A.E.C., Cloutier, Shax.

Third Class.—Buster, Zimmerset, Chardon, Niphetos, Dum Spiro Spero, T.T.C., Borealis, Viribus Unitis, Chestnut, M.H., Un Amateur, Wilfrid, Sydney, Hoche, C. Berkeley Margetts, L.J.T., Carol Ward, Moriendo Vivo, Une Alliée, E.G.R., Quasimodo, Valkyrie, Mow, Dublin, Aidan, Corbeau, Rouen, Corn-crake, Yet Again, Olim, Son Enfant, Monica.

Fourth Class.—C. D. Bowyer, Ahasuerus, Janvier, Leander, Lehte, Phyllis, Beetle, Nadzieja, Porc-épic, Undergrad, E.M.L., Camelia, Riplis, Pupil, Student, Filius, Santal, Josephine, R.A.C., Pastor, K.A., Monte, Ault, Agram, D.D., Cant, L.A.L., V.F., Bevis, Dare, Poilu, Lui, Bis, R.A.M.

It is a rare experience of the Prize Editor to find that he has set too simple a passage. The landscape that Victor Hugo paints is not quite easy to realize. He is tramping from Dieppe to Saint-Valéry by the coast and a sudden turn of the cliff footpath reveals to him a wheatfield on the steep slope, stretching to the top. At the bottom of the field are the harvesters and gleaners, and beyond,

X Other Transfers and Partnerships are on pages 75 and 76; other School and Teachers' Advertisements are continued on pages 104, 105, 106, and 107. **X**

apparently above it, is the sea; the yellow sheaves stand out against deep blue of the waves, and topmost of all are the fishing smacks in the offing, like the gables or pinnacles of a homestead.

"I still followed the cliff path, and an hour's walking brought me almost to B.-d'A., the main object of my tour," is the natural beginning. *Et qu'on achevait*. Best by a sentence: "The harvesting was at its last stage." (Mowing and reaping were often confused). *Mais mon champ*: "My field, however, was a perfect gem—a narrow plot of rich corn land marked off on the steep slope, hedged all round, and the ocean atop of all." Tennyson's "crowned with summer sea" records the same phenomenon, and is tempting, but for the startling climax the French order of words must be preserved. *Mais*, like the Latin *at*, is really exclamatory, but it contrasts this cornfield with the late, and therefore poor, harvest of the year. *Jeu de la perspective*: not "optical illusion," but "effect of foreshortening." *Etaient posées*: not "were placed," but "the stooks stood so erect." *Une pauvre vache insouciant*: "a solitary apathetic cow." *Tout cela*, "The whole landscape breathed peace and calm, a Pastoral and an Epic in unison." "This eclogue" smacks of the construer. *Philosophique*: "so appeals to the philosophic mind." What Wordsworth meant when he used the phrase is clear. With Hugo it probably only signifies that Nature presents violent contrasts. In the following sentence, a dash instead of the last comma would make the construction clear. How could the spectacle set the figures in it musing? *Un liseré violet*: "A line of distant blue."

A caution may be added against an error in English that is growing common: "Leaving the field, the scene changed."

A Prize of Two Guineas is offered for the best translation of the following lyric of Charles Fontaine:—

Mon petit fils qui n'as encor rien vu,
A ce matin, ton père te salue;
Vien-t-en, vien voir ce monde bien pourvu
D'honneurs et biens qui sont de grant value;
Vien voir la paix en France descendue,
Vien voir François, notre roy et le tien,
Qui a la France ornée et défendue;
Vien voir le monde où y a tant de bien.

Jan, petit Jan, vien voir ce tant beau monde,
Ce ciel d'azur, ces estoiles luisantes,
Ce soleil d'or, cette terre ronde,
Cette ample mer, ces rivières bruyantes,
Ce bel air vaque et ces nuës courantes,
Ces beaux oyseaux qui chantent à plaisir,
Ces poissons frais et ces bestes paissantes;
Vien voir le tout à souhait de désir.

Petit enfant! peux-tu le bien venu
Estre sur terre, où tu n'apportes rien,
Mais où tu viens comme un petit ver nu?
Tu n'as de drap, de linge qui soit tien,
Or ny argent, n'aucun bien terrien;
A père et mère apportes seulement
Peine et soucy, et voilà tout ton bien.
Petit enfant, tu viens bien povrement!

De ton honneur ne veuil plus être chiche,
Petit enfant de grand bien jouissant,
Tu viens au monde aussi grand, aussi riche
Comme le roy, et aussi florissant.
Ton héritage est le ciel splendissant;
Tes serviteurs sont les anges sans vice;
Ton trésorier, c'est le Dieu tout-puissant;
Grâce divine est la mère nourrice.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners will be required to send real names for publication.

All competitions must reach the Office by February 15, addressed "Prize Editor," THE JOURNAL OF EDUCATION, 3 Broadway, Ludgate Hill, E.C.

Those in the First Class are entitled on application to a copy of "Essays, Mock Essays, and Character Sketches."

Translations sent with an addressed and stamped envelope and six penny postage stamps will be returned corrected. Foreign postage stamps are not accepted.

Translations will not be returned unless both these conditions are complied with.

These School and Teachers' Advertisements are continued from page 103.

ASSOCIATION OF UNIVERSITY WOMEN TEACHERS.—Teachers, with University qualifications (degree or equivalent), requiring posts in Public or Private Schools, are invited to apply to the Secretary. ASSISTANT MISTRESSES AND GOVERNESSES.

Messrs. GABBITAS, THRING & CO.,

36 SACKVILLE STREET, LONDON, W.,

invite applications from qualified Ladies who are looking for posts in the Teaching Profession.

This Agency, which is under distinguished patronage, has been established over 40 years.

The following are some of the Vacancies for the COMING TERM and after EASTER, for which MESSRS. GABBITAS, THRING & CO. have been asked to put forward candidates:—

General Form Mistresses.

MISTRESS required for first-rate Boys' School within easy reach of London, to teach Junior English, History, and, if possible, Swedish Drill. Salary offered £120 non-res.—No. 3,073.

ASSISTANT MISTRESS required for first-rate Boys' School in the West of England, to teach Mathematics to London Matriculation standard, and Geography for Cambridge Local Examination. Salary offered £50, res.—No. 2,876.

MISTRESS required at once, for first-rate Dual School in the West of England, to teach English and History. A good teacher and disciplinarian essential. Salary offered £120 non-res.—No. 3,346.

TWO FORM MISTRESSES are required for first-rate Dual School in the West of England; would be a recommendation if one of them could offer French. Salary offered £100 non-res.—No. 3,347.

MISTRESS required at once for first-rate Boys' School in the West of England, to teach General Form subjects. Salary offered £60 res.—No. 3,330.

ASSISTANT MISTRESS required for important Boys' Secondary School in the North of England, to teach Elementary English and Mathematics, together with General Form work. Salary offered £150 non-res.—No. 3,313.

MISTRESS required for first-rate Girls' School in the Midlands, to teach Geography on modern lines up to the Senior Cambridge standard. It would be a recommendation to offer Needlework. Salary offered £130 non-res.—No. 3,279.

SECOND MISTRESS required for Private Boarding School for Girls in the Midlands, to teach Mathematics, Latin, Nature Study, and English. It would be a recommendation to offer Elementary Chemistry. Member of the Church of England essential. Salary offered according to qualifications and experience, in addition to board, residence, and laundry.—No. 3,185.

ASSISTANT MISTRESS required at once for first-rate Boys' School in the Midlands. The Master, who is leaving, takes the Upper Latin and English, i.e. to Senior Local Standard; it would be convenient if his successor could take this work, but, if necessary, the Head Master could rearrange it and give the mistress Middle Form work in the same subjects. Salary offered £150 non-res.—No. 3,319.

ASSISTANT MISTRESS required at once for first-rate Boys' School on the East Coast, to teach English as her main subject. Salary offered from £130 non-res.—No. 3,295.

ASSISTANT MISTRESS required for first-rate Boys' School in the Midlands. The lady appointed will be required to teach mainly in the Prep. School, but it would be an advantage if she could take some subject with higher forms, such as Mathematics or Drawing. Salary offered £120 non-res.—No. 2,993.

Mathematics and Science.

ASSISTANT MISTRESS required for first-rate Boys' School within easy reach of London, to teach Chemistry up to Intermediate B.Sc. standard as main subject. Candidate would also have to take some other subjects, to be arranged

Mathematics and Science—continued. (e.g. Mathematics, Geography, and French). Salary offered £150 non-res.—No. 3,068.

TEMPORARY ASSISTANT MISTRESS required at once for important Secondary School in S.W. of England. The most important subject required is Mathematics. Salary offered £100 non-res.—No. 3,339.

ASSISTANT MISTRESS required at once for large Boys' School in London, to teach Physics up to University Scholarship standard at least. Salary offered £40 to £45 per term non-res.—No. 3,331.

SCIENCE MISTRESS required at once for important Boys' School in N.W. of England, to teach chiefly Physics up to Inter. Science standard. Salary offered £120 non-res.—No. 3,215.

TWO SCIENCE MISTRESSES required for mixed Secondary School in N.W. of England, to teach Physics and Chemistry. Salary offered £120 to £140 non-res., according to qualifications and experience.—No. 3,275.

Kindergarten and Lower Form.

JUNIOR FORM MISTRESS required for first-rate Boys' School in the South-west of England, to teach English, Arithmetic, History, &c. Any of the following would be a recommendation:—Swedish Drill, Singing, Drawing. The candidate appointed will have entire charge of the lowest form, with possible duty with the highest forms, according to qualifications; and one who could help with Games would be welcomed. Salary offered £120 non-res.—No. 3,071.

MISTRESS required for high-class Private School for Girls in the Midlands, to teach the usual elementary English subjects. Salary offered £60 to £70 res.—No. 3,065.

MUSIC MISTRESS AND ORGANIST required at once for small Preparatory School within easy reach of London. The Mistress appointed, besides Music, will also be required to teach elementary English subjects. Salary offered £60 res.—No. 3,171.

MISTRESS (JUNIOR FORM) required for one of the best Schools in England. Subjects required are elementary Mathematics and Latin, besides usual English subjects. It would be a recommendation to offer Music. Salary offered £50 to £60 res.—No. 3,307.

MUSIC MISTRESS required at once for Grammar School in the Midlands. The work will be to take Class Singing and Music with boys and girls. In addition, the Mistress will be required to assist with ordinary work of a Boys' School, probably in forms containing boys not over 14. Any ordinary School subject for this purpose would be useful. Salary offered, £110 non-res., probably rising.—No. 3,243.

Modern Language and Foreign Mistresses.

MODERN LANGUAGE MISTRESS required for large Boys' High School in the West, to teach French and German on modern methods to Upper Forms of the School. Salary offered from £130 to £150, according to qualifications and experience, non-res.—No. 3,059.

Modern Language and Foreign—cont.

MISTRESS required for Girls' Secondary School in the Midlands, to take French (acquired abroad) and to offer, as subsidiary subjects, Needlework or Mathematics and Scripture (undenominational). Would be a recommendation to be able to take part in the Games. Salary offered £125 per annum, non-res.—No. 3,023.

ASSISTANT MISTRESS required for Girls' High School near Midlands, to teach French on the direct method throughout the School. Experience and degree essential. A candidate is looked for who has had long residence in France. Salary offered £110 to £150 non-res.—No. 2,974.

FRENCH MISTRESS required for Girls' Private School within easy reach of London. Besides French the candidate should be able to take some German if possible. Member of the Church of England essential. Salary offered, according to qualifications and experience, res.—No. 2,752.

FRENCH LADY required after Easter for one of the best Schools in England, to take charge of a small house of Girls. The lady appointed must speak French, entirely, in the house, and would be expected to attend to the housekeeping, &c. Salary offered £40 to £50 res.—No. 3,221.

FRENCH MISTRESS required for high-class Girls' School on the South Coast, to take entire charge of the French throughout the School. A lady looked for who is a good disciplinarian and who has had previous experience in a good boarding school. Salary offered £50 res.—No. 3,320.

FRENCH GOVERNESS required for three little girls in North Midlands. Besides French, the Mistress appointed must be able to teach English subjects, Drawing, and Piano. Protestant essential. A lady is looked for who is accustomed to country and who would enter into the pursuits and games of the children. Salary offered £50 res.—No. 3,267.

FORM MISTRESS required for Girls' Central High School in the West of England, to teach French and German. Degree or equivalent and good teaching qualifications essential. Commencing salary £110 non-res., rising by annual increments of £5 to £160—No. 3,151.

Domestic Science.

DOMESTIC SCIENCE MISTRESS required for Girls' Private School in London. Salary offered, according to qualifications and experience, res.—No. 2,924.

DOMESTIC SCIENCE MISTRESS required for Girls' School near Maritzburg. The candidate must hold a first-class diploma for Cookery, Dressmaking, and Needlework, and in addition must be competent to teach Housewifery, Laundry, or Millinery, or First Aid or Home Nursing. It is necessary to have had experience of not less than three years. Salary offered £90, £100, and £110 in three successive years, res. Passage paid out.—No. 2,952.

MESSRS. GABBITAS, THRING & Co. have on their Books also Vacancies for Student Mistresses, Matrons, Science Mistresses, and Private Governesses.

Candidates desiring to apply for any of the above or other suitable vacancies should write fully to MESSRS. GABBITAS & THRING, stating their age, qualifications and experience, and enclosing copies of their Testimonials.

A Prospectus will be forwarded gratis on application. NO CHARGE FOR REGISTRATION, and no Fee of any kind is due unless an Appointment be obtained through the Agency.

SCHOOL TRANSFERS AND PARTNERSHIPS.

MESSRS. GABBITAS, THRING & CO. have a large number of BOYS' and GIRLS' SCHOOLS on the books in their Transfer Department. On learning a Purchaser's qualifications and requirements, they will send notices of opportunities likely to prove suitable, without making any charge to Purchasers.

Messrs. TRUMAN & KNIGHTLEY, Ltd.,

Educational Agents,

SHEFFIELD HOUSE, 158 to 162 OXFORD STREET, LONDON, W.

Messrs. TRUMAN & KNIGHTLEY assist qualified **Lady Matrons, Housekeepers, and House Mistresses** to find appointments in Boys' and Girls' Schools.

Ladies desiring further information of any of the above and of other suitable Vacancies should write fully to Messrs. TRUMAN & KNIGHTLEY, stating their age, qualifications, &c., and enclosing copies of their testimonials.

NO CHARGE OF ANY KIND is made to applicants unless an engagement be secured through this Agency, when the terms are reasonable. Prospectus, terms, &c., will be forwarded on application.

ASSISTANT MASTERS.

This Department, which introduces men to Public and Preparatory Schools, is under the personal direction of Mr. JAMES HEARD, B.A. (Westminster and Trinity College, Cambridge).

SCHOOL TRANSFERS & PARTNERSHIPS.

A separate Department, under the personal management of one of the Directors, is devoted entirely to the negotiation of School Transfers and Partnerships.

No charge is made to purchasers.

BLACKIE & SON'S NEW LIST

Experience has proved that Messrs. BLACKIE & SON'S Books take a foremost place by reason of their scholarly editing, clear type, strong binding, and reasonableness in price.

INTERMEDIATE ORAL LATIN READER.

Based on Cicero's *De Senectute*, with Extracts from Martial and Horace.

BY

FRANK JONES, B.A.,

Assistant Master of King Edward's School, Aston, Birmingham; Joint Author of "Scott and Jones's Latin Courses."

Illustrated. With or without vocabulary. Price 2s.

This Oral Reader is intended for pupils who have a working knowledge of elementary accidence and syntax, but who are not quite ready for a Latin "Author" in his entirety. To this category will belong most pupils at the beginning of their third year.

A FIRST LATIN COURSE.

By ERNEST H. SCOTT, B.A., late Head Master of Boys' Secondary School, Barberton, Transvaal, and FRANK JONES, B.A., Assistant Master, King Edward's School, Aston, Birmingham. **1s. 6d.**

A FIRST LATIN GRAMMAR.

To accompany and complete Scott and Jones's Latin Course. By ERNEST H. SCOTT, B.A., and FRANK JONES, B.A. **2s.**

A SECOND LATIN COURSE.

By ERNEST H. SCOTT, B.A., and FRANK JONES, B.A. Illustrated. **2s. 6d.**

"May be said to mark a new epoch in the teaching of Latin."—*School World*.
"We greatly prefer this Latin book for beginners. The plan of the book is thoroughly sound, and it has been well carried out."—*Journal of Education*.

A SHORTER SECOND LATIN COURSE.

By ERNEST H. SCOTT, B.A., and FRANK JONES, B.A. Alternative to A Second Latin Course. **2s.**

THE PLAIN-TEXT SHAKESPEARE.

THE GREATER PLAYS. TEXT ONLY. NO NOTES. Strongly bound in cloth. Price **4d.** each.

A New Edition of the greater Plays of Shakespeare, presented in a serviceable form, at a cheap price. The text follows the well-known **Junior School Shakespeare**, which omits everything that might be thought undesirable in class reading.

The Merchant of Venice.
Julius Caesar.
As You Like It.
King Henry V.

Coriolanus.
King Richard II.
King Richard III.
The Tempest.

Twelfth Night.
Hamlet.
King Henry VIII.
King John.

Macbeth.
King Lear.
Midsommer Night's Dream.

The above Plays may also be had in the **Junior School Shakespeare**, with Notes, **8d.** or **10d.** each.

EUROPE SINCE NAPOLEON. (1815-1910).

By ELIZABETH LEVETT, Tutor in Modern History, St. Hilda's Hall, Oxford. With 10 Maps (2 in Colour). **3s. 6d.**

The histories of the various countries of Europe are treated in turn, prominence being given to the great personalities that have shaped the course of events. Special chapters deal at the beginning with the Congress of Vienna, and at the end with the diverse constitutions of the Continent, and with some tendencies of the nineteenth century.

THE MAINSTREAM OF EUROPEAN HISTORY.

By the Rev. FREDERICK HARRISON, M.A., Senior History Master, Rutherford College, Newcastle-on-Tyne. Crown 8vo, with maps. Price **1s. 6d.**

In this book a simple account is given of the rise of the German Empire, the origin and development of the Eastern Question, and the various factors which culminated in the great world war.

BLACKIE'S SMALLER ENGLISH CLASSICS.

Selections from Standard Authors.

Edited by Competent Scholars, with Biographical Sketch and Explanatory Notes. Each, paper, **2d.**; limp cloth, **3d.**

LE TEXTE EXPLIQUÉ.

Recueil de morceaux choisis des auteurs français, arrangés en groupes selon le sujet traité, avec explications détaillées rédigées en français. Cours Moyen. Selected and edited by E. J. A. GROVES, B.ès L., L.ès I., Senior French Master, Bradford Grammar School. Cloth boards, **2s.**

LE LIVRE ROUGE.

A First Book of French in Coloured Pictures. By E. MAGÉE, Edgbaston High School for Girls, Birmingham. With many full-page Coloured Pictures and other Illustrations. Fcap. 4to, **1s. 6d.**

COURS DE FRANÇAIS, d'après les Textes.

By M. ANCEAU and E. MAGÉE, Edgbaston High School for Girls, Birmingham. Cloth boards, **1s. 6d.**

Introduces pupils of 12 to 14 years of age, who have had one year's teaching by the direct method, to a more systematic knowledge of the necessary grammar.

BLACKIE'S LONGER FRENCH TEXTS.

From Modern French Literature. Printed in large, clear type, with brief Notes, Exercises, Phrase list, and Vocabulary. Fcap. 8vo, **8d.** each.

BLACKIE'S LITTLE FRENCH CLASSICS

Representing all important French Authors from Montaigne to Bourget. Fcap. 8vo, **4d.** each.

PROGRESSIVE FRENCH COMPOSITION.

By MARIE F. KRASSER and LINA MORRISON, High School, Govan. Cloth boards, **1s.**

FRENCH VERBS MADE EASY.

A simple and complete exposition of French verbs on practical lines with 56 Graded Exercises by J. L. THÉODORE-GETZ, B.ès L. 156 pp. Price **1s.** net.

ON THE WRITING OF ENGLISH.

By GEORGE TOWNSEND WARNER. Price **3s. 6d.** net.

From the Author's *Introductory Note*.—I have tried to set down briefly the first principles of building up an "Essay": the way to gather and sort material; then to reveal the commonest pitfalls which lie in wait for the beginner, and to put him on his guard against glaring mistakes.

Prospectuses giving full particulars of above books will be sent post free on application.

Teachers' Registration Council

Representative of the Teaching Profession
(Constituted by Order in Council, February 29, 1912)

In accordance with the above-mentioned Order, a

REGISTER OF TEACHERS

is now maintained by the Council

For Information apply to THE SECRETARY,
TEACHERS' REGISTRATION COUNCIL,
NOTE NEW ADDRESS. 47 BEDFORD SQUARE,
LONDON, W.C.

All Persons interested in Phonetics

are recommended to join the

INTERNATIONAL PHONETIC ASSOCIATION.

Subscription 2s. 10d. per annum.

Members receive free of charge the *Maitre Phonétique*, the official organ of the Association (Editor: P. Passy, 20 Madeleine, Bourg-la-Reine, Seine, France; Assistant Editor: D. Jones, University College, London, W.C.).

Prospectus on application.

Specimen copy of the *Maitre Phonétique*, 1d. post free.

CAREY'S "GRADUS AD PARNASSUM"

WITH THE ENGLISH MEANINGS

Revised, Corrected, and Augmented by a Member of the University of Cambridge

Post 8vo, cloth, price 7s.

THE STATIONERS' COMPANY, Stationers' Hall, London.

ASSOCIATION OF HEAD MASTERS.

THE Incorporated Association of Head Masters held their twenty-fourth Annual General Meeting in the Guildhall on January 4 and 5. At the first sitting nearly a hundred members (two in khaki) were present. The retiring President (the Rev. E. F. M. MACCARTHY) introduced his successor Mr. W. W. VAUGHAN (Wellington College).

President's Address.

Mr. VAUGHAN, in reviewing the losses and gains of the last five-and-twenty years during which he had been a schoolmaster, compared the chief changes that he had witnessed to the introduction of "central heating." It gave us adequate, though not very genial, warmth, saved labour and fuel, and guarded against extremes of temperature. The State and the Local Authorities were the furnaces, and the Inspectors were the pipes through which the heat was distributed. There were fewer rooms in the educational mansion, but all of these were warmed, and no children were now left outside, literally and metaphorically, shivering in the cold. The gain was great and palpable, but there were defects and dangers in the new system that must not be overlooked. Wisdom had not always been shown by the distributors of heat. Now and then the pipes had choked, and maybe some fires that were burning brightly through individual effort had been damped, but the work had been faithfully done, and the educational temperature had been raised all over the country. Even hostels that did not admit the public pipes had been stimulated to replace their old grates by new. They were all aware of the defects of the central system. The open fire, with all its wastefulness, was a good ventilator. The atmosphere of a room warmed by a central furnace tended to become oppressive; there was a certain monotony and a want of individuality. It was an atmosphere where damp would not destroy, but where dry rot might—an atmosphere in which red tape lasted longer than red-hot energy, in which they expected to see pigeon-holes rather than visions. Conferences, Associations, Councils, Guilds of Teachers had sprung up to ventilate grievances—some real, some fanciful—of their own class or group, but these had also served to pump fresh air into the overheated and unventilated rooms. If the Board of Education and the Local Education Authorities could be regarded as bacteria in the educational body, associations like theirs might be depended on to play the part of phagocytes. Though he was little likely to belittle the work of Education Authorities or societies like that, there did, he thought, lurk some danger in their increasing number and exuberant vitality. Just as a man who devoted too much attention to the bacteria in his body might become *malade imaginaire*, so those who devoted too much attention to giving advice to the Board of Education and to one another might become sterile bores. The one essential quality in a teacher was a living personality, and there was too much trust in machinery. The stress of peaceful days would be much greater than the stress of war. Teachers would be called to build again on the ruins of the past, to restore their shaken, if not shattered, ideals; to see to it that the rising generation were better prepared than this for the battle of life—a preparation not only military, but of heart and character, inspired by the perfect devotion to duty that our enemies have shown. The future depended greatly on the men who could be attracted to the work of teachers. A splendid opportunity was offered of revitalizing the profession. There must be less talk of salaries and more of duty. When, twenty-five years ago, he consulted his old Head Master, Dr. Jex-Blake pointed out to him that from a worldly point of view the position of an assistant master not in Holy Orders offered few attractions, and, though the restriction of head masterships to clerics had since been removed, it was truer than ever now that the Civil Service offered more numerous and more tempting careers. Teaching must still be a vocation, not a business; and, as Arnold pointed out in a famous letter, the essential qualification demanded of a teacher is that he should be a Christian and a gentleman. Were all instinct with this spirit, we should not find it necessary to discuss how to teach patriotism in schools. Given the fire that is burning in the teacher's heart, the choice of subjects is comparatively unimportant.

A vote of thanks to Mr. MacCarthy for his services during his year of office was proposed by Mr. G. E. S. COXHEAD (Hinkley) and seconded by Mr. CHOLMELEY. Mr. Coxhead said that they desired to do honour to a veteran who was retiring after fifty-five years of active service, and thirty-three of them as a head master. He was ever a fighter since the battle for School Boards, when he was one of the famous Liberal Eight, with Joseph Chamberlain and Dr. Dale as comrades. The battleground had changed, but Mr. MacCarthy would oppose to the end the rival system with which we

were at grips. English teachers had never let themselves be made the tool of the Government, the Army, or the Democracy. The vote was carried by acclamation.

Position of the Teaching Profession as regards Military Service.

There was no resolution on the Agenda, but the PRESIDENT, in introducing a discussion, said that it was open to all members to draft one. The great majority of secondary masters had already attested, and no claim had been made that teachers should be placed in a privileged class, but complaints were raised that Local Education Authorities had abdicated their functions and left it to head masters to determine the minimum staff with which their schools could be worked. Mr. E. YOUNG (Harrow County High School) stated that eleven of his staff of fourteen had left him to enlist.

After some desultory conversation, on the motion of the REV. C. J. SMITH (Hammersmith), seconded by Mr. W. GILSON (Birmingham), it was resolved:

"That masters who, having attested, are certified as medically fit only for home service should be allowed to continue their work at school, and not be called up for service."

War Economies in Education.

Sir JOHN MCCLURE moved:

"1. That, in effecting economies in educational expenditure, reductions in the expenditure on administration, inspection, and material should precede economies more directly affecting the immediate needs of the children.

"2. That, in all schools under their control, the Board of Education and Local Authorities should at once reduce to a minimum their requirements as to inspections, examinations, returns, and all kinds of clerical work; and that the expenditure on prizes, school functions, plant, and apparatus should be, wherever possible, curtailed.

"3. That the present scale of salaries for assistant teachers should not be regarded as admitting of a reduction.

"4. That, whereas any reduction in the normal staffing of schools is directly injurious to education, wherever such reduction is necessitated by present emergencies it should be regarded as a purely temporary expedient.

"5. That this Association do consider the best means of reducing the expenses of school life, and that all its members pledge themselves to seize this opportunity of making simplicity of living a marked feature of English public schools."

The first four resolutions had been drafted by the Federal Council at the end of November, and would, he believed, be approved by the Association, though he himself could have wished the third, as open to misinterpretation, had been differently worded. He had inquired that morning of the Secretary of the Registration Council, and heard from him that many teachers living on very limited means had approached, and in some cases crossed, the narrow margin that separated them from starvation. He commended the policy that, he believed, Sir R. Blair had advocated before the London County Council, that it was better for efficiency to reduce numbers than to lower salaries. The Registration Council had made a careful inquiry into the matter, and the results were now being tabulated and digested. The last resolution, subsequently added, aimed not only at economy, but also at developing the corporate life of a school and making boys realize the pleasure of plain living.

Military Training.

Mr. MALIM (Haileybury) proposed:—

"That in the opinion of this Association military training in secondary schools should as soon as possible be reorganized under the direction of the War Office."

He reminded members of the resolution passed two years ago, "that military drill and the use of the rifle should form part of the training of all boys." He had no desire to add at the present moment to the burdens of the War Office, but they should make up their minds as to what they wanted when the War was over. A recent inquiry showed that there were ninety recognized Cadet Corps, and between thirty and forty unrecognized. Their chief difficulties had been financial. The O.T.C. were administered by the Department, and received a grant of £1 for every member over fifteen years, and the instruction officers are paid according to rank. Cadet Corps received no Government grant, and were not directly administered by the County Territorial Force. They formed a "secondary job," and were consequently neglected. Australia offered a model. Uniforms, rifles, &c., were provided; there was an allowance of 2s. for every cadet between the ages of fourteen and eighteen, and of £20 for each headquarters.

INCORPORATED ASSOCIATION OF ASSISTANT MASTERS.

THE Annual General Meeting was held at Merchant Taylors' School, E.C., on Wednesday, January 5. Resolutions that had been discussed and passed by the Council on the previous day were put to the meeting and carried. Mr. A. Somerville (Eton College), who succeeds Mr. G. D. Dunkerley (Watford Grammar School) as Chairman for 1916, presided. The first and most important resolution was on "Educational Economy," treated under five heads. It affirmed its belief that any reduction in State grants for education would be false economy and gravely prejudicial to the welfare of the nation; that both the Board of Education and the Local Authorities at once reduce to a minimum their requirements as to inspections, returns, and all kinds of clerical work, and curtail expenditure on plant, apparatus, and prizes; that the present scale of salaries for assistant teachers does not admit of reduction in any case; that any reduction in the normal staffing of schools is directly injurious to education, and if ever necessitated by the present emergencies should be regarded as a purely temporary expedient.

Other resolutions demanded that on every Local Authority and governing body there should be at least one nominee of the teachers employed in the secondary schools, and again asserted the right of an assistant master to be heard by the governing body before his dismissal can take effect.

The last resolution recorded the gratitude of the Association to their fellow-teachers, more than eight thousand in number, who are serving in H.M. Forces, and their resolve, so far as in them lay, to fill the gaps in schools caused by the absence of their colleagues.

The able address of the ex-Chairman will be found in the current number of the *A.M.A.*

THE FOURTH EDUCATION CONFERENCE, HELD AT THE UNIVERSITY OF LONDON, JANUARY 3 TO 8, 1916.

THE fourth Conference of Educational Associations took place in circumstances of unparalleled national difficulty. Parliament was debating the advisability of compulsion for the half-million, more or less, single men who had not volunteered for military service under Lord Derby's group system. It speaks volumes for the sense of duty and responsibility which distinguishes the teaching profession that, after the longest and most trying term of 1915, so many of its members grouped in twenty-three educational bodies were again found willing to sacrifice one week of their hard-earned holiday in order to take counsel together and listen to the wisdom of their elders, the *emeriti*, and administrators, who can take a wider outlook than is possible for men and women absorbed in the daily round and routine of school life. In Exhibition Road the intelligent might have noted the signs of a popular gathering; but even there the signs of war predominated. In the broad roadway facing the Institute recruits were being drilled, and two brakes of wounded men were criticizing the performance. The Vice-Chancellor was dressed in khaki. The Great Hall was filled to hear Sir Oliver Lodge, Principal of Birmingham University. His subject was "Education after the War."

School Teaching and School Reform.

Teachers as a class were far too conservative. They regarded new subjects as barely respectable. Two danger signals had been sent up in the Great War: by Germany the heavy, dull, mechanical grind of mere preparation for business; by Britain the neglect of things intellectual, inattention to facts, and widespread ignorance even among the governing classes. The fact stares us in the face that education has not led to widely diffused knowledge. We are behindhand in initiative. Capable men were not called in at the start; only now are we beginning to organize; manufacturers refrained from consulting experts. Inspection by the ignorant and

inexpert has proved an extravagant farce. We have been saved as by fire by men and women outside the governing circles; our eyes are open to the national peril. Sir Oliver then dwelt on some special aspects of educational questions, and it was astonishing to note how his wide survey of the field was confirmed afterwards in the meetings of the different associations treating such a matter, say, as over-haste in education. He thought we had not yet found the right program for the average boy in the third and fourth forms. He is often marking time, protects himself against wrong teaching by inattention and listlessness; there is much dreary waste, and disciplinary troubles arise. For boys of this age education should be far more of a physical, practical kind, such as mechanical work, machinery, gardening, farm work, natural history collections, the study of electrical and chemical phenomena, drawing, music. The mental and intellectual should be relaxed; thought should be stimulated on the lines he suggested. The mind should not be forcibly fed by books; these should be consulted as needed. We know little of the route when a friend personally conducts us in a strange town. Yet some adults began their study of geography after the declaration of war. Youth needs intellectual rest; when it is denied, the habit of inattention grows with fatal facility. With regard to differentiation for literature or science, picked pupils should not study either exclusively. Instruction in the branch for which the student has aptitudes is not so necessary as instruction in the other. The scientific student needs literary expression. We teach the three "R's," but our children cannot read intelligibly, and their speech is slangy. Our schools often fail to discover the brains of the nation; a Faraday and a Watt rise from the ranks by their own efforts, not by our system. England has not believed in education. We must have a period of national stock-taking. When will there ever be such an opportunity of inculcating patriotism? Boys need bodily discipline and character training. Many costly middle-class schools combine all the evils and none of the advantages of the public schools.

TEACHERS' GUILD.

TUESDAY, JANUARY 4 (MORNING).

CANON MASTERMAN, in his Presidential Address, dealt with "Education as a Factor in International Peace." We had presented to us at this moment the spectacle of a noble people corrupted by education, and moulded by an unscrupulous oligarchy. In Germany the teacher was the servant of the State, and the love of the Fatherland had been degraded by an admixture of arrogance and insensate ambition. With us the "Rule Britannia" spirit was counteracted by a sense of humour and self-criticism, but these saving virtues the German lacked. Education had, in the course of history, produced one or two colossal catastrophes. Much had been said about the dangers involved in ecclesiastical control, but those involved in political control were equally great. Education ought never to be allowed to become an instrument in the hands of the State. As some protection against such a danger in this country, he mentioned the system of non-provided schools, the encouragement of local influences, and the limitation of the control of the State over Universities. The teacher's work should be ethical, not political. We wanted a clearer idea of our aim in education. Medieval education had a definite aim, so had German education; modern British education had none. The results were not proportioned to the cost and the effort. We wanted an international mobilization of educational forces. He would like to see a Conference of Allied Nations to consider how the present fellowship is to be maintained. At the same time, he felt that much of the internationalism preached at the present day was unattractive. Nationalism was a great power for good; we must not wish to see it weakened. Peace, too, was made sometimes an unattractive ideal, because it was conceived as a mere negative—as life without sufferings, pains, adventure, or heroism. What was needed was to show that the heroic virtues need not languish in time of peace. This was difficult. Exploration was nearly finished, and research was for the few. The only possibility left was the adventure of the soul, and this must supply the needed heroic element. The demand of the world was for justice; true peace must be founded on justice, not on revenge. Teachers must cultivate in children the sense of justice for all nations; they must develop imagination and sympathy. Foreign history was unfortunately too often crowded out; but it should be taught, and taught from the point of view of the

foreign nation. He would like also to see more contemporary literature read in schools, including Russian (in translations) and cuttings from French periodicals. At the same time, children should be taught about the British Empire, and learn that it is great because it gives freedom to the nations contained in it. It was the highest form of political organism yet evolved. He would like a textbook written in the five languages of the Allies showing the value to the world of small nations. To stamp out the life of any nation with a developed self-consciousness was a kind of murder, hateful to God and man. The sense of fair play was formed in our playgrounds more than in our classrooms, but we had no monopoly of the virtue; and as peoples became articulate, they all demanded justice. Education meant the substitution of the sense of justice for that of self-interest. We should teach children that the ultimate test for any course of action is, "Is it fair?"

TUESDAY, JANUARY 4 (AFTERNOON).

The subject for discussion in the afternoon was "Part-time Education after Fourteen." The chair was taken by Mr. Ferguson, educational adviser to Messrs. Cadbury & Co.

Mr. J. H. REYNOLDS (Manchester) said that there were now about 71,000 half-time children, chiefly in textile districts, and 193,000 children left school at thirteen, many entering casual or "blind alley" occupations. The first thing needed is to abolish half-time. What the best fathers would desire for their own children the nation should seek to give to all. Two things were wanted after fourteen—technical training and the further study of school subjects, the humanistic included, and also the study of duties and responsibilities of citizenship. Evening schools for adolescents between fourteen and seventeen should be a thing of the past. We talked of capturing German trade, but it could be captured only by the same methods as had produced it—education and science. In agriculture science and skill were needed; therefore country children must have the best education possible. Yet there was a cry for reducing the leaving age. The Wiltshire County Council was an honourable exception. Evening schools were unsatisfactory, only one-third of the students took an organized or systematic course; and the average attendance was about 60 per cent. Out of 2½ millions of boys and girls between fourteen and seventeen only about half a million got any schooling at all. In a certain Lancashire borough with 185,000 inhabitants, three young people at least out of five ceased their education wholly at or before fourteen. The Post Office had recognized its responsibility to its junior staff, so had a few employers. Instruction must be given during the day working hours. In Munich, where the system of continuation schools is so highly developed, all but 8 per cent. of the children enter definitely taught trades. The example of Munich was being followed all over Germany.

Mr. J. C. MAXWELL GARNETT (Municipal School of Technology, Manchester) said that in education we wanted continuity. The first way to get it was to make education specific in the last years of the educational period. The nearer a pupil was to entering upon life the more must his practical needs be kept in view. This applied to all education from the University downwards. A University student should have decided on his profession before the end of his first year. Children who were destined to enter industrial life at fifteen should leave the elementary school at twelve or thirteen and spend two years in a Junior Technical School which gives a literary as well as a technical education. For the last two years of the elementary school a different type of education was required, the centre of which should be manual work. The second means of continuity was part-time education, which must be conceived not as an alternative to whole-time education, but as a continuation of it. Six years of half time was not an equivalent for three years of whole time. In Manchester the provision for training the ordinary workman was very defective. Civic subjects should include economics, so that workmen might understand something about production, capital, and wages. He agreed that the part-time courses must be conducted in the day time. Finally, the system must be democratic, and in that respect totally different from the German system. Entrance to the Universities must be possible for part-time students. This would necessitate change in the matriculation examinations.

Mr. A. C. COFFIN (Director of Education, Bradford) said that day continuation schools were most successful when established by employers for their workpeople; those organized by Local Authorities or voluntary effort were less successful, because the element of compulsion was lacking. The whole question was wrapped up in compulsion. He recommended taking half the necessary hours from the employers' time and half from the workman's.

A brief discussion followed.

SOCIETY OF EDUCATION.

MONDAY, JANUARY 3.

THE Chair was taken by Canon MASTERMAN, who said that the Society hoped shortly to publish its first volume of transactions.

Dr. A. R. ABELSON gave an account of the investigations into mental deficiency which he had been carrying out in some London County Council schools. The tests used were (1) grip, with use of dynamometer; (2) tapping with sharp instrument as quickly as possible; (3) crossing out rings; (4) crossing out sets of dots; (5) memory for sentences; (6) memory for forms; (7) geometrical figures; (8) discrimination of length; (9) interpretation of pictures; (10) opposite meanings; (11) observation; (12) recognition of absurdities in sentences. The results were calculated by means of Prof. Spearman's "Method of Ranks." Each test was tried twice with each child. The speaker proceeded to speak of the pitfalls which beset the use of mental tests. The Binet-Simon system was a good beginning in this department of psychology, but the time had come for its development and improvement. It was essential to know exactly what each test investigated. Tests must be reliable and consistent with themselves. A large number of exercises must be given. The tests must proceed from the easy to the more difficult. They should depend as little as possible on scholastically acquired knowledge. "Emotional stupor" on the child's part was a frequent source of error. Psychologists differed about the nature of mental ability, some holding that all mental activities were independent of one another, others that there was a general intelligence or ability common to all mental processes. He inclined to the latter view. His investigations indicated that mental deficiency consisted in a general lowering of all mental functions, since it is a condition resulting from a defective supply of intellectual energy. He found that in the case of normal children all the tests employed, except "grip," "tapping," "memory for form," and "interpretation of pictures," gave satisfactory correlations with ability and with each other. In the case of defective children, the diagnostic value of all the tests was much the same. The "grip" and "tapping" tests were almost as valuable as the "memory for sentences" test. This was a remarkable result. The success of the first was connected, no doubt, with the fact that defective children were generally of poor physique and weak will, while the failure of the children to "tap" confirmed his view that mental deficiency showed inability to execute what the will desires to carry out. It was noticeable that some children do fairly well at tests who fail badly at school work, a fact which deserved special investigation. Others again showed precocious conversational power, but could do nothing. Some children with evil tendencies were irritated and demoralized by the forced immobility and dullness of our elementary school system. Others with a highly nervous temperament found dull routine unbearable. Many of these did much better at the special schools, where conditions were less constrained and they were allowed to be active. It was time that they realized that there was something wrong with a system which treats abnormal children by normal methods and normal children by abnormal methods.

Mr. C. BURT (London County Council Psychologist) gave an account of investigations he had made into the correlation of mental or general ability and scholastic ability. He had examined 600 defective and 3,000 normal children in elementary class subjects and by means of mental tests. He found that, on the whole, ability in one subject tended to carry with it proficiency in others. This made him suspect a central underlying intellectual element. Composition was the best test of general intelligence, if it was marked for power of systematic relevant thought and not for knowledge of facts. Scholastic ability coincided to a great extent with general ability, but there were children who are scholastically defective but efficient for social purposes. Defectives advanced slowly till twelve years of age, and then stopped. The deficient of fourteen was generally on a level with the average child of eight, but the range of deficiency was great. Ability was distributed in the child community symmetrically. It could be predicted what number of children would fall above or below the normal level, and how many children were capable of further education. A defective child might be defined as one who is 30 per cent. below par, a backward child as one who is 15 per cent. below par.

MODERN LANGUAGE ASSOCIATION.

WEDNESDAY, JANUARY 5.

MR. EDMUND GOSSE, in his Presidential Address, raised the question of the study of modern languages after the War. It is certain, he said, that politics have influenced the study

of foreign languages. The peace with France at the close of the seventeenth century was followed by increased attention being given to the French language in this country; and the first impulse to the study of German was curiosity to understand the temperament of the allies who fought with us at Waterloo. In earlier times, however, wars were the affairs of governments and armies, and there were always a large number of persons who stood aloof from the military interests of the country. The present War is unprecedented in the unanimity of the national interests involved; it represents with us the effort of a whole Empire, and the same is true of other nations. We must certainly expect that after such exacerbation of feeling, political bias will more than ever affect the study of languages. This question therefore we must put to ourselves: Is the study of German to be relegated after the War to a place entirely subordinate to that of the languages of our Allies? Some light may perhaps be thrown upon it by observing the trend of opinion in German educational circles with regard to the converse matter, that is to say, the cultivation in Germany of French and English studies after the War. He had investigated, so far as was possible, the state of German feeling, and had arrived at certain conclusions. In the autumn and winter of 1914, the violence of the German hatred of England and France knew no bounds; with regard to England especially it assumed in highly educated and hitherto balanced persons the characteristics of hysteria, almost of insanity. The manifesto of the ninety-three intellectuals, published in October 1914, had appalled him as much as all the excesses of the German soldiery. He did not believe that spirit could last amongst men of cultivation, and as a matter of fact it had not lasted. In this first spasm of rage, however, there developed in Germany a stormy movement for omitting both French and English from the school curriculum. So serious a professional journal as *Die Neuen Sprachen* reflected this view, and many educational authorities expressed the opinion that the Teutonic languages were sufficient for themselves, and that, with a renewed attention to Latin and Greek, and perhaps a closer study of Oriental tongues, it might be possible to dispense with such debased and useless languages as French and English. Prof. Josef Hofmiller intervened with a contribution in which he admitted that there could be no doubt that French was played out as a world language, but that English stood on a different footing. Critics in Baden and Bavaria, however, expressed their preference for French as an educational medium, and said that they could get on very well without English. It was all the more remarkable that the question of dropping English should have been raised because up to the time immediately before the War, it was taking the foremost place in the *Gymnasien* and *Realschulen*. The six years English course was a conspicuous feature of German school training. Such were the first results of national hatred, acting more rapidly than usual. More recent discussion had led to the formation of two groups of opinion about what are called "cultural relations." There is one large group which, having recovered its sanity, admits that for the European brainwork of the future, international enmity must not be allowed a place in the field of scholarship and research. The other group continues to declare that international work in matters of this kind will have to be resumed with extreme reserve and must not be unduly hastened. Many German authorities speak with a great deal of common sense on this thorny subject. Dr. Hermann Oldenburg, for instance, had written, "We will not and shall not forget how much the culture of Germany and the world owes to French and English thought." On the other hand, Dr. Wilhelm Wied, Professor of Physics, asks whether it is possible or worth while to form any friendly relations with the scientific representatives of a nation so destitute of the least ability or wish to appreciate the thought of other nations as the English. Scientists were in general more bitter against us than scholars. Prof. von Wilamowitz-Möllendorf had lately issued a remarkable manifesto, which had not been noticed in any of the English papers. In this curious document the following passage occurred:—

"The academies and learned societies which guide public opinion in Germany have been watching every step which might prevent the resumption of international intellectual intercourse at the end of the War; but until the proper moment arrives for their intervention they will proceed no further. So far as we know, the French Academy is the only learned body which has adopted an opposite line, and it must take the responsibility of whatever consequences may ensue from its action. The manifestations made by isolated scholars in various countries must not be allowed to produce a mischievous effect on the resumption of correct connexions between corporate bodies after the conclusion of peace. Our hopes and our wishes should be allowed to extend no further than this—to acquiesce in whatever may ultimately prove in harmony with such reciprocal relations of the States as may be accepted after the conclusion of peace."

Coming from the man who filled an almost official position as the

recognized head of the German intellectual world, and who was also a representative nobleman of the highest *Junker* class, this declaration seemed to show that after a year of struggle, which had brought her no nearer to her dream of world domination than when she started, Germany had tacitly abandoned her hope of forcing the whole world to adopt her scheme of intellectual training. He was not one of those who laughed at the Teutonic scheme of imposing the Prussian form of mental and moral discipline upon the rest of mankind. It was the most formidable and most carefully planned attack upon the liberty of intelligence with which the world had been threatened since the days of Mohammed. If it had succeeded, it would have reduced the mind of man to permanent and hopeless slavery. Therefore there was something consoling in the relative moderation of the pronouncement of Prof. Wilamowitz-Möllendorf. Still, while the issues of the War were doubtful, neither side could approach the other. The French took a much more serious view of intellectual interrelations than we did. The French Academy had taken a strong line in repelling the possibility of intercourse after the War. M. Paul Sabatier had declared that the cleft between France and Germany in the world of letters could never be filled up. The view held by the intellectual leaders of France was that Germany had cut herself off from the benefits of civilization by her crimes. His impression was that in England we have not yet determined on an ostracism so complete. But if certain provinces of continental thought are likely to be closed to us, or at least made obscure and irksome in approach, there are others which should be more accessible. First, the noble language and literature of France. When the War was over, the last rags of our ridiculous "Pödsnappery" would be swept away, and we could expose ourselves to the radiance and warmth of the French genius. Then there was Russian. But ordinary people could not learn many languages, and a man of limited leisure could obtain more light and leading from French than from any other tongue.

THURSDAY, JANUARY 6 (MORNING).

Mr. VON GLEHN (Perse School) opened a discussion on "Methods of Treating the Reading Text in the Middle Forms." He drew a sharp distinction between intensive and extensive or rapid reading. In the latter case continuous translation should be dispensed with, and necessary explanations should, with rare exceptions, be given in the foreign tongue. The text thus read must be well within the pupils' powers of comprehension, so that they may feel the same directness of apprehension as when reading an English book. This will give enjoyment and a sense of increased power. The text might even be one which, if written in English, would seem childish. Books for voluntary reading at home should be one stage easier still. At advanced stages rapid reading becomes the main work of the modern language specialists, who thus acquire a knowledge of many of the masterpieces of French literature. Intensive reading, on the other hand, provides the linguistic study proper in specially composed or selected and carefully graduated texts, which provide the material for the processes of assimilation and reproduction. The one developed the passive knowledge or power of understanding the language, the other the active knowledge or command of the language for purposes of self-expression. As the pupils progress, the gap between the two grows wider; intensive reading approximates to what the French call *lecture expliquée*, and leads up to free composition, which is more than mere reproduction. In the pupil's fourth or fifth year—supposing him to begin at ten—this differentiation begins to become important. The speaker then took an extract from a French textbook, and showed in detail how he would treat it with a class without any use of English.

Miss A. L. HARGRAVES (St. Saviour's School) said she had come to the conclusion that it was wise to use translation in the middle forms. She thought the importance of method was overrated. So much depended on personality. Many good teachers would lose half their power if forced to adopt a method which was foreign to their temperament. She had found the Direct Method in use throughout her present school, but experience had led her to modify the scheme. One difficulty she found was that in reading lessons she had to go extremely slowly; otherwise haziness and inaccuracy resulted, and the disciplinary value of language teaching was lost. Other drawbacks were that the senior girls found translation, either to or from the language, very difficult, and that they had no solid foundation of grammar. They now worked on the Direct Method for the first two years, then came systematic study of grammar and the use of two reading texts—an easy one for rapid reading and one less easy for translation after preparation at home. This led to the discovery how few girls had any idea of correct or idiomatic English. Even in rapid reading she never hesitated to demand a translation of any specially difficult passage. The general result was the written work was better than it used to be,

the oral work not quite so good. Her conclusions were that the Direct Method was good with the lowest forms and the highest, and in all classes with clever girls and plenty of time. Where brains and time lacked, she preferred the old-fashioned methods in the middle forms.

In the discussion that followed, Mr. CROFTS (Masonic School) and Mr. S. A. RICHARDS (Hackney Downs School) supported, in the main, Miss Hargraves' views, while Miss Wright (Sittingbourne County School) pleaded for less translation and grammar, and more oral work for the slower children.

Mr. RIPPMAHN confessed that he was doubtful about the best methods to employ in schools of the type of St. Saviour's, supported the systematic study of grammar, and evoked the applause of the meeting by declaring that a considerable proportion of the children in such schools ought not to be learning any foreign language.

At the end of the morning session Mme D'ORLIAC-BOHN gave an address on the work of the Institut Français.

WEDNESDAY, JANUARY 5 (AFTERNOON).

The subject for discussion was "The Teaching of European History in connexion with Foreign Languages." Representatives of the Historical Association joined in the discussion. Mr. H. L. HUTTON (Merchant Taylors School) was in the chair.

Mr. A. J. B. GREEN (Perse School), in introducing two interim reports which had been drawn up, said that their leading idea was that the language teacher should fit narratives taken from European history into the school plan of historical studies.

Prof. HEARNshaw (King's College) said that recent educational thought had been marked by two movements, a sense of the growing need of specialization and an increasing recognition of the unity of knowledge. History, language, and literature were intimately connected; in classical studies they had always been closely associated. Mr. Stanley Leathes had recently advocated a fusion of the Historical and Modern Languages Triposes. The difficulty of such a scheme was that other subjects might with equal propriety be fused with history; for instance, classics, law, political economy, and the moral sciences. The policy of co-ordination was preferable to the policy of fusion. The aims of historical and literary studies were different. History aimed at developing imagination and sympathy, forming the judgment, inculcating a sense of truth, and giving information. The linguist studied language as the instrument of thought, and was more concerned with the style and form of a book than with its content. If we accepted the principle of co-ordination, the next question was who should teach the subjects. In the Universities and higher forms of schools, separate teachers were necessary; but in the lower forms, where the influence of the single mind over children was so important, the same person might well teach both. In the fourth year of school life a genuine co-operation between linguistic and historical studies ought to be possible, and European history should be studied at this stage, not English history with a few foreign attachments. He favoured a minimum of history in all honours triposes and would suggest the outlines of general history with special emphasis on certain periods. The use of French and German textbooks in the history classes or the converse use of historical textbooks for teaching French and German he thought impracticable, because in either case a study already sufficiently difficult would become further complicated.

Miss NEROUTSOS (Cambridge Training College for Women) said that it was impossible to do the degree work at Cambridge without a good deal of historical study; this was really forced upon the student of literature. She favoured the principle of co-ordination, and thought the teaching of history in the language hours impracticable.

Mr. C. E. K. MARTEN (Eton) was opposed to the idea of a general survey of history, which he thought more likely to result in muddle than in sound knowledge. The intensive study of a few periods was much better.

Miss HOWARD (James Allen's School for Girls) advocated supplementary reading by children. We assumed too readily that children could not read for themselves. Some European history might be used in the holidays, or books might be put in the form library.

Mr. VON GLEHN (Perse School) also thought that something might be done by supplementing reading both in and out of class, while Mr. JANAU suggested lectures with slides or a kinematograph; Mr. MANSION (Merchant Taylors School) the use of a simple *Histoire générale*, the relevant chapters of which might be read for an hour a week; and Mr. PEERS (Felsted) the selection of unseens and subjects for essays which were connected with history. Mr. B. J. HAYES said University authorities should be

urged to include more history in their examinations and, to make room for this, medieval studies might well go overboard.

Prof. TROPHIMOV (King's College) gave an address on "Chekhov and the Russian Drama."

HISTORICAL AND GEOGRAPHICAL ASSOCIATIONS.

A JOINT Meeting of these Associations was held at University College on January 7, to discuss the relations between Geography and History. Prof. LYDE took the chair.

Mr. H. J. MACKINDER, M.P., opened for the Geographical Association. He showed that physical geography was an unstable study, and that as students got deeper into it they found themselves studying climatology, geology, &c. The only thing that could give unity to the subject was the regional aim: that is, the interactions of man and natural phenomena in certain regions, the explanation of the environment of the human subject. After the War we should have to face a demand for much reorganization in education, and a return to fundamentals. He distinguished three essential intellectual elements: equipment with weapons specially human, that is, powers of expression and mathematics; scientific training, with a view to technical application; and "outlook" subjects, that is, history and geography, which must always be sisters. The aim of the latter subjects in education was not so much the discovery of new facts as the giving of perspective and poise. Democracy must learn where it stands amidst the clash of the nations. As regards Universities, he advocated complete separation of geography and history; the practical equipment of the geographer differed from that of the historian. But in the lower secondary and elementary schools we must forget pigeon-holing by subjects. The simpler the time-table the more the teaching will approximate to the teaching of the big world. Up to fourteen, therefore, the teacher should teach without thinking whether he is teaching history or geography. Space and time should go together, and the child should learn where he is in both. Teachers should be trained in both subjects, and no option allowed as now in training colleges. The man who knew one and not the other was blind in one eye.

Prof. RAMSAY MUIR spoke for the Historical Association. He said that he did not understand the doctrine of teaching time and space simultaneously; the teaching must be primarily either history with geographical facts or geography with historical illustrations. The indebtedness of history to geography is greater than that of geography to history. In the treatment of history the influence of physical facts was formerly too much neglected; now the danger was over-emphasis of those facts. The correlation of the two often worked out as correlation had done in the celebrated instance of the lady and the tiger. Spiritual movements were sometimes traced to geographical causes, as in the doctrine laid down in some textbooks that monotheism is a product of deserts. Overworked teachers, with little time for thought, were deluded by these easy and plausible generalizations, and there was a danger of history being materialized. The fate of the French and English colonies in North America could be traced to geographical facts, but only by leaving out vital human facts. The poisonous doctrine found in some books—"man is a part of the fauna of the earth-crust, and subject to the same laws as the rest"—contained, no doubt, an element of truth; but all the rest had to be taught by history, especially the moral progress of society. Natural societies, e.g. bees, were distinguished by ruthlessness; civilization is the diminution of ruthlessness and the growth of the spirit of justice. He wanted both geography and history in schools, and pleaded for separate and distinct treatment of the two.

Prof. FLEUR (Aberystwyth) held that in the lower parts of schools the two subjects should be taught by the same teacher, whose time-table should be elastic, so that he could expand the one or the other subject at any time as seemed convenient. In higher work separation was absolutely necessary.

Mr. ORFORD gave examples of the possibility of history being lost in geography, and Mr. ROGERS thought that all teaching about humanity should be left to the historian. Mr. THURSTON (Kilburn Grammar School) thought Prof. Ramsay Muir had been demolishing men of straw. He pleaded for better marks for geography in government examinations. Mr. WHITE held that in elementary schools the teacher for the two subjects must be the same. He wanted two pass degree courses for teachers—one in geography, history, and literature; the other in mathematics and science, the subject of education to be added in each case.

Prof. LYDE claimed that geography was an older science than

history. Primitive man was wholly subject to geographical conditions, but as regards historic man the true doctrine was not that his activities were caused by physical facts, but that they were controlled by them. Geography creates a fishing-ground, but not the fishermen; you may have the first without the second, but the second without the first is impossible. Man, his imagination, and his feelings are the supreme thing. At University College they had what he thought was probably the most geographical school of history in the world.

Miss REID (University College, London) held that students of history should study geography and *vice versa*; but in the time-table the two should be kept separate. The information was not the full benefit derived; each subject had a method of its own. The facts of geography were observable by the eye, the facts of history demanded sympathy, imagination, insight.

HISTORICAL ASSOCIATION.

THE Historical Association met at University College on Friday, January 7, Mrs. J. R. GREEN being in the chair. The subject for discussion was "The Teaching of Naval and Military History."

Mr. JULIAN CORBETT gave an address, much of which was devoted to a discussion of the smaller operations during the Napoleonic war, and especially of the Walcheren expedition, which he defended as a strategic expedition of the highest value. Naval and military history, he said, should never be taught apart, and the constant recurrence of co-operation between the fleet and the army should be emphasized. The chance for the teaching of naval history had come when Lord Fisher introduced the new scheme of training naval cadets. Such history was taught to cadets, not for purely technical, but for general educational, reasons. At Osborne the teaching was purely biographical, and designed both to foster a wholesome hero-worship and to give some idea of the exploits of the navy. At Dartmouth the more serious treatment began, and the meaning and effect of operations were explained. We must get rid of the idea that naval history is nothing but a succession of battles. At the Higher War College strategy and its connexion with political considerations were studied. Some naval history was economic—e.g. the unsuccessful expedition to Monte Video, which was destined to open up the markets of South America.

Mr. T. SECCOMBE (Sandhurst), after astonishing the audience with an account of a colonel who had never heard of the Indian Mutiny, said that England had averted her mind from military studies and urged the teaching of military history in view of the circumstances of the time.

Mr. G. CALLENDER (Osborne) said historians and history teachers shirked the navy because of the difficulties of terminology and the lack of good books. The navy had always been subject to a great natural Press Bureau—namely, the sea—which had curtailed the knowledge of its doings.

Mr. HODGES (Dartmouth) described the syllabus and system of teaching naval history on the "Britannia." Political history was taught in lines parallel to naval. Criticism was avoided. The important thing was to get a grip of the problem as it presented itself to the Admiral at the moment. A knowledge of the exact meaning of language was essential; such phrases as "command of the sea," "fleet in being," covered morasses of loose thinking.

Mr. BURN (Sidcot School), looking at the question from the Quaker point of view, agreed that it was necessary to teach military history. In giving such instruction, he tried to excite, on the one hand, admiration for heroism, and on the other detestation for war. The aim of such study was to learn how to avoid war.

Dr. MORRIS (Bedford Grammar School) said that, if feeling about battles was stirred up in boys, feeling about the political events which led to them would follow. We had to contend against the underlying belief of the British nation that the army was an institution of the "haves" to suppress the "have nots."

"Teaching of Imperial History" was the subject of the Saturday meeting, Mrs. J. R. GREEN being in the chair.

Sir CHARLES LUCAS dwelt on the variety of the problems which our Empire has to solve. Every conceivable race difficulty arises in our Colonies; every form of democratic constitution is or will be represented in it. Sir Charles alluded to the existing animus against the imperial idea. Many regard it as the offspring and parent of bombast and vainglory, and would fain give it the happy despatch. The history of England is that of the Empire. Great Britain has

made the Empire, and the Empire has made Great Britain. There is no true history of our Islands that is not Imperial; it cannot be segregated; the Empire has always been in the making, even in the days of the Stuarts. The pitch has been queered: imperial history is English history, wholly true in contradistinction to that partial history where the trees obscure the wood. Three elementary facts and their effects emerge in imperial history:—The essential *humanity* of the story. Women are less imperial in some respects than men, and yet, being so human, they shape the destiny of nations. The enterprise of the East India Company, the emigration of the Puritan Fathers are the outcome of beings and forces essentially human. Great Britain is an island; we all know it, but forget the application. The lecturer himself only realized the full significance of the fact the other day. There has never before been an Island Empire, though one is now in the making—Japan. The advantage of our island position has been lost by the inventions of science. By reason of aircraft we have ceased to be an island. Has anything ever before put the influence of scientific invention in its right place? Look at the spaces we assign respectively in our histories to the Reform Bill and to Stephenson's locomotive, now exhibited at Darlington Station.

What do continental peoples do when troubled with growing pains? They cross the boundaries and remove their neighbours' landmarks. What did the Islanders do? They crossed the seas. A Hundred Years' War with France ensued, but they tightened their hold on the oceans, and then lost their new Empire by the Declaration of American Independence. They built up another; and always their new lands demanded charters of freedom and insisted on self-government, as English emigrants have ever done since 1407. This has resulted in democratic government. Great Britain has become more maritime, commercial, manufacturing. Both she and her Colonial Empire studied their own interests, and the method has proved successful. But two drawbacks emerge: Great Britain ceases to be self-dependent, and her possessions are scattered. The Empire must be federated, else its existence is precarious. Science must aid us. The lecturer then demanded that all textbooks of history must be judged by their treatment of the Imperial point of view, and discarded if their writers had not grasped the essential facts.

Prof. EGERTON was prepared to jettison all that does not vitally and directly concern the history of the Empire. In the eighteenth century Great Britain fought Louis XIV for the hegemony of the New World; to-day Germany aims at world domination, and would overthrow our Empire. You cannot understand the American Revolution, still less write upon it, unless you go through the records of Massachusetts, and follow in them the great struggle for self-government. Seeley's *Expansion of England*, with notes appended, should be the future textbook of the imperial idea. We must beware of short cuts, and only build on a knowledge of the soil where the foundations are laid.

Dr. G. R. PARKIN complained of how the last century of our history in the textbooks tails off into a few general expressions, as if history had worked itself out, whereas the expansion of the Empire surpasses imagination, and the task of picking up the threads is appalling. The growth of the Empire and of scientific invention is recent and rapid. He himself had seen the man who stoked Stephenson's first locomotive. A few years ago Mr. Asquith said in Parliament that the imperial government could not yield up control of imperial possessions to a colony. But to-day South Africa was administering the German African possessions, and Australia had taken over New Guinea. The United States should have joined us in 1834 and abolished slavery in their borders. They declined, and delayed. By 1864, delay had cost them a million lives, and they had to spend 8,000 millions a month.

Our present task is to federate our Empire. We must strip bare the political questions that absorb Great Britain's energies. Colonial statesmen have faced the same questions and settled them.

Prof. POLLARD dwelt on our high ideals. The imperial idea was widening our views, but, in a shamefast manner, we forbore alluding to the existence of the spiritual and moral forces that underlie our actions. We could not breathe in the ideals of a German world. There were not only economic considerations, but moral and spiritual ones which we are chary of putting forth.

Others followed with animated speeches. The whole audience was exhilarated with the imperial idea. Then came the still small voice of the teacher. Miss Mitchell, of the Melbourne University, and Miss Spalding, of Goldsmiths' College, recalled to the audience a fact that they had somewhat overlooked. Young people, and that large section of persons who retain the mind of the young person, cannot be nourished on streams and tendencies. Miss Mitchell pleaded with historians to remember that Australians would always be interested in their own country first; tendencies come in at a later stage. There is a real need of sympathy.

Australians found books defective and uninteresting which never alluded to their existence.

All the speakers agreed on the necessity of rewriting our textbooks; we must change our outlook, regard Great Britain as the product of her past, consider her future in its light. Misunderstanding was mainly the product of ignorance.

MORAL EDUCATION LEAGUE.

THURSDAY, JANUARY 6 (AFTERNOON).

DURING the first part of the meeting the chair was taken, in the unavoidable absence of Sir Robert Baden-Powell, by Mr. CECIL CHAPMAN, the Metropolitan Magistrate, who said that the question was whether our present education fitted children for civic life. Judging from the experience of his Court, the answer was "No." The system seemed to be bad; he wanted the "community sense" more developed.

Dr. FARQUHARSON, Secretary of the League, in opening the discussion on "Training and Citizenship," said that the League was committed to no theory or party; its members differed fundamentally from one another, but were all believers in education. After an elaborate survey of the position of the member of a democratic community, he suggested some questions which needed elucidation. (1) Can we trust school children with functions useful to the community? (2) Can children take part in social work in their district? (3) Can we get a real community life in our schools, the community doing work which is not dictated from the outside? (4) Can such life be organized without adult dictation? (5) Can we produce such a liberation of social energy as will lead to literature and art?

Miss BROWN SMITH (Goldsmiths' College) showed how the child got his first lessons in community life in the infant school, and gave a description of an ideal infant school in which the community sense might be developed.

Miss BANCROFT (County High School, Chelmsford) gave an account of her methods. She said that high-school mistresses had bequeathed to County and Municipal schools the idea that a school must be a community, and the idea was embodied in the traditions, usages, and activities of the day school. The great principle involved was that "it is the practic part of life which must be mistress to the theory." One instance was the election of form-captains by the girls themselves, in connexion with which she always impressed upon the children the necessity of making a right choice, and the perfect system. Then there were the bronze medals given to girls who play well, which were not a reward, but primarily a qualification for service. Subscriptions to the games were purely voluntary, and no amount was fixed. There were also voluntary clubs for handicraft, science, music, and literature. No prizes were given in her school. It was important to stamp upon the girl's mind that the school is part of a town or county. Love of country in children could not be more than an abstraction and we must beware of unreal emotion.

Mr. DEVINE (Clayesmore School) denounced the class feeling of the higher schools. Pedagogues, parents, and society were all at fault; all pioneer work was discouraged; the schoolmaster never leads; originality horrifies.

The Hon. LILY MONTAGU and Mr. ERNEST YOUNG (Harrow County School) followed with accounts of Girls' Clubs and Boys' Scouts respectively, but, as these institutions are well known, it is scarcely necessary to report the papers. Mr. Young said that in five months after the outbreak of war 50,000 boys helped in hospitals, offices, and so on, giving their services gratis. He added that as the result of the Scout movement, "being good has become a game, and the man who has managed to make the practice of a virtue equivalent to a sport is the greatest genius of any age."

Mrs. WALTER ROCH followed with an account of the Girl Guides, and Mr. HOMER LANE described "The Little Commonwealth." He said that delinquent children easily assume responsibility. Their forty-three children, who had been discarded from society, constituted a real self-governing community, making and administering their own laws. Each member earned his own living, the citizens lived in cottages holding fifteen or twenty each, and managed their domestic concerns with the help of a resident Mother.

After an interval for tea, the meeting resumed with Prof. MUIRHEAD in the chair.

Dr. FARQUHARSON introduced the subject of "Training by Intellectual Processes." He said the citizen needed to understand the economic machinery of society, also the voluntary and the governmental machinery. They must start from the civic life of the

child's own environment, and he thought regional survey was a fruitful idea. The child must have a part in organized social life. Knowledge-giving and the development of the emotions must be closely connected.

Miss SPALDING (Goldsmiths' College) showed how history might be used to train the "community sense." The old view that history was simply chronology had been thrown over; history was now regarded as the evolution of communal life. They should begin with the primitive Anglo-Saxon village, and all children could understand that. The meaning of tax-paying should be taught. Economic life should be explained, and children should learn that the individual is dependent on the community. History has been made too much the history of the governing classes. The history of democracy must begin with the heroic individual, the plain man who had really done all the work of the world, and then children must go on to the social and economic world which they could understand. Mr. ROXBY spoke on Geography.

Mr. COCK (King's College) reminded the meeting that the problem of moral education was the problem of the individual, and of an individual who thinks. Sound practice must be based on consciously realized principles. Children want habits of thinking as well as habits of action; in fact, they want an ethical theory. He described an experiment he had tried in an elementary school. He had discussed with an upper standard the first and last chapter of Aristotle's "Ethics," putting the problems before them and so elucidating principles. The resulting discussion had, he believed, been of great value. Moral instruction on the basis of pure theory was wanted as well as incidental instruction.

Dr. HAYWARD held that the school was primarily for instruction. It did not follow that devotion to scouting always developed into devotion to the community. We could not translate all moral feeling into community feeling.

ASSISTANT MISTRESSES' ASSOCIATION.

MISS E. R. PEARSON (St. Leonard's School, St. Andrews) presided at the Annual Meeting of the Association, held on Friday, January 7. She announced that Miss E. M. C. Prideaux (St. Saviour's and St. Olave's Girls' Grammar School) had been elected President for the coming year.

The Economics of the Profession.

For one who had the leisure and the skill it would be both interesting and useful to trace the economic history of the teaching profession. Glancing at it superficially, she saw conflicting and often incompatible ideals, and an economic standard of life which varied between that of a wealthy noble and an ill-paid artisan. The variation, she believed, was due to some extent to the elementary fact that, as Socrates said of old, the art of teaching and the art of money-making were different arts, and the Sophists who, because they professed to sell knowledge, were ranked by Plato among the criminal classes. Yet teachers should be paid at such a rate as to set them free from petty cares and worries about making both ends meet, and that was the ideal towards which their Association had been working. In saying this, however, she was speaking of normal times, not such a time as the present. There were some enthusiastic spirits among them who would suggest giving up part of their salaries, or pooling them, in order that there might be no reduction of staff or the possibility of individual hardship. If this were possible for all, it might be the easiest method of economy, but as it was, with rising prices and the increase of taxes, it would mean for many, if not for the majority, a crossing of that border-line between simplicity of life and penury, near which too many already stood. It was not safe to abandon the position to which they had at present advanced. They would have to be ready for some speeding-up, some discomforts; and, above all, they must make themselves more mobile, and be willing to go wherever their services were needed, to boys' schools or schools of a lower grade. Temporary expedients, as such, they might be willing to support, but only on the understanding that they should be removed as soon as possible.

The following resolution, proposed by Miss C. L. LAURIE (Hatcham), after considerable discussion, was carried by a very large majority:—

"That this Association, while fully recognizing the need for economy under the present abnormal conditions, wishes to protest against retrenchment being made at the expense of efficiency in education. It is of opinion that the present scale of salaries does not admit of any reduction, and that, inasmuch as any reduction in the normal staffing of schools is

directly injurious to education, wherever such reduction is necessitated by present emergencies, it should be regarded as a purely temporary expedient."

A grant of £100 was voted to the Professional Classes War Relief Fund (Education Section), and the establishment of a Loan Fund for the use of A.A.M. members was approved.

At the open meeting on Wednesday afternoon, Sir SIDNEY COLVIN read a most delightful paper on "A Recent Gift to the Public: Box Hill, Burford Bridge, and their memories—Keats, Stevenson, Meredith."

THE MATHEMATICAL ASSOCIATION.

THE Annual Meeting was held at the London Day Training College on January 5. The President, Dr. A. N. WHITEHEAD, in place of the intended paper on the results of recent mathematical research, took as the subject of his address, "The Aims of Education: a Plea for Reform." He pleaded that education should be a living influence that aimed at fostering the growth of the mind so as to fit it for acquiring after the school age the special knowledge required for the pupil's chosen career. He deprecated the communicating, before the age, say, of eighteen, of a mass of "inert ideas," i.e. of facts that were not "used," that did not depend on and illustrate the pupil's environment, whether facts in history and geography or "rules" in arithmetic and unrelated propositions in geometry. Every era of intellectual progress had been marked by a revolt against "inert ideas," and had been succeeded by a reaction by the conservatives in favour of a fresh set of "inert ideas." This reaction was fostered and spread by external examinations and the syllabuses of examining bodies. These have their use, and must continue; but their evil influence might be greatly reduced, if not eradicated, if instead of detailed syllabuses only the scope and limits of the subjects to be treated were indicated, and the set papers so framed as to discourage "cramming" in any shape, and to encourage within the proper limits independent study. The part of the Reviser is to ascertain whether the candidate has correlated the facts and assimilated his knowledge.

The Address was followed by a short paper on "The Allowance for the Earth's Rotation in the Theory of Projectiles."

Mr. G. W. PALMER communicated the results of an investigation into the degrees of accuracy to be expected in simple arithmetic work in boys' schools.

A discussion on the Use of Mathematical Tables in Schools was opened by Mr. A. LODGE.

Mr. S. Baldwin and Mr. Goldwell were elected on the Council, to replace Dr. T. P. Nunn and Mr. A. S. Jackson, retiring members.

THE CHILD STUDY ASSOCIATION.

THIS Association held an open meeting after Council affairs had been discussed. The Rt. Hon. Sir JOHN COCKBURN, M.D., was in the chair, and observed that our lives are strictly entailed and we must do nothing to depreciate the stock.

Dr. C. W. SALEEBY then gave an able, inspiring address on "Saving the Future." His chief points were that 90,000 men in the flower of life had been killed in the year 1915; the year was distinguished also by the lowest birth-rate; infant mortality had risen, so had the civilian death-rate; the marriage rate had increased; 1915 is the most disgenic year in the history of the British Empire. The gifted lecturer then dealt with post-natal and pre-natal efforts that are being made, mostly in infant clinics, to save infants; even before birth the coming child should be regarded as a possible citizen and saved for life. Male life is less viable than female life; infant mortality increases the disproportion of the sexes. At the last census female lives already outnumbered male lives by more than a million. By the saving of infant life we should probably lessen, or, at any rate not increase, this disproportion. We have five hundred infant clinics in the country, but need two thousand. The causes that produce infant mortality also produce damaged lives. Racial poisons produce deaf-mutism, blindness, insanity, epilepsy, &c.

Dr. ERIC PRITCHARD, Mrs. SCHARLIER, M.D., and others took part in the discussion that followed. It was pointed out by one of the audience that Dr. Saleeby had not dealt with the important fact that, by taking wise precautions to lower the general

death-rate, infant mortality immediately falls. Countries with a low birth-rate, such as Holland, New Zealand, have invariably a very low death-rate, and yet their rate of increase of population is higher than that of countries with a high birth-rate and a high death-rate. Wimbledon has one of the lowest death rates in the kingdom, 7 per thousand; its infant mortality rate is also low, 100. The Medical Officer of Health of Wimbledon pointed out in his report that in a congested area of the suburb, South Wimbledon, the general death-rate sprang up to 26.7, and the infant mortality rate to 315. The inference is that, to save life and the future, a vast and thorough scheme of re-housing the working classes will prove to be a great aid in lowering mortality rates.

THE ASSOCIATION OF TEACHERS OF DOMESTIC SUBJECTS.

THIS Association also held a single meeting. Miss HAWLEY'S address dealt with "The Economic Aspect of the War," in which she gave some of the appalling figures which illustrate the ruinous financial cost of Armageddon to the nation. Even such a wealthy country as Great Britain cannot stand it long, and there is a crying need for economy. The reasons of our enormous expenditure depend firstly on the fact that our Government bargains instead of dictating terms to traders; that we pay, on an average, counting allowances to families, 25s. weekly to each man who fights. Germany pays 12s. monthly to wives, and is apt to dock the amount if a woman is strong enough to work. We raise the vast sums required by taxation and by people lending money to the Government as War Loans. The lecturer hinted that forced loans might be resorted to if enough money were not obtained by voluntary methods.

Miss Hawley dealt with the necessity for great economy, especially as regards the purchase by ourselves of other nations' exports. Gigantic fortunes were being made by war contracts and squandered on extravagant luxuries, and the working people were buying gramophones and pianos. We must study thrift now, if ever.

The CHAIRMAN, Miss Margaret Ashton (City Councillor of Manchester), testified to the fact that never had Manchester children looked better dressed, shod, and fed than at present; their mothers looked less careworn by having sufficient money to run the house; the savings banks had never done as much business as to-day.

The Rev. J. C. PRINGLE (Secretary of the C.O.S.) addressed the Association on "Training for Social Workers." The paper was read, and at such a rate that it was not very well heard. Mr. HECHT recalled the members to domesticity by stating that the Food Reform Society had prepared a list of economical dishes that were nourishing, and, at the same time, as economical as the present conditions would permit. Their lecturers were trained to use the fireplaces and utensils of the ordinary working-class home.

THE SCIENCE TEACHERS' ASSOCIATION.

MISS F. M. DURHAM, of the John Innes Institute, read a paper on "Some Problems of Heredity," illustrated by excellent lantern slides, recording recent experiments of Mr. Arthur Darbishire and other investigators on different coloured mice, canaries, &c. It was, however, difficult for laymen unacquainted with Mendelian technology to follow the argument completely.

KING ALFRED SCHOOL SOCIETY.

FEW of the twenty-three Associations represented at the Conference made a better show than "King Alfred." The subject—"Over-haste in Education"—was opportune, and the papers read by the openers, Prof. Foster Watson, Mr. J. Russell (Principal of the School), Miss Alice Woods (late Principal of the Maria Grey Training College), and the Chairman (Prof. Findlay, of Manchester) were all on a high level.

If the school, said Prof. FOSTER WATSON, be adapted to the life of the age, it will lead to over-haste. The motor-car is its outcome and symbol. "Ohne Hast ohne Rast" should be the motto of our

schools. There are, indeed, moments when we must direct all our energies to a single task, but they must be the right moments. Over-haste results if we choose the wrong ones. The very word "school" signifies a place for leisure, and slow growth yields the best results; yet teachers are ever urging children to "hurry up," and examinations require that so much shall be done in a year. Each child should be allowed to go at his own pace. If one child needs a year more than another, what matter? A forced pace produces either precocity or stupefaction. We should aim at restfulness, a quiet mind, and reserve force for great occasions. The secret of John Bright's impressive oratory lay in the suggestion of reserve force. We must not be the nation of jarred nerves; we want neither ceaseless industry nor feverish haste, but power to put forth energy when needed.

Mr. RUSSELL showed how the King Alfred School Society had been formed to free one corner of the education vineyard from the trammels of examination. They were free as to curriculum and methods. They had no marks or prizes, no home work, unless parents asked for it. They were not seeking to fashion souls into the image of others, saints or heroes, but to give opportunities for the pupil's own growth by his own efforts. They did not aim at strawberries in January. Machine-made guns are necessary, but not machine-made men and women. We have standards of speed for locomotives, but not for the growth of the soul. Without the stimulus of place-taking and prizes or any special preparation, King Alfred scholars held their own, even when the test of examinations and the winning of scholarships was applied.

Miss ALICE WOODS thought that in a sense the Germans had succeeded where we have failed. They had educated people for war; we had not educated ours for service. We need not wait till we are centenarians, as Metchnikoff predicts, to devote more time to education. She would have no one teach below twenty-three. In training college we rush to "get through" a program in nine months. We should train men and women willing to learn, distinguished by desire for progress, possessing initiative and enthusiasm. We overcrowd our time-tables in the colleges, struggle with the incongruity of the work and the examinations, push through at all costs, and in the end have to listen to the unanimous cry of students: "If only we had had time."

The CHAIRMAN pointed out that repose is ceasing to characterize present day faces. We should not forestall the years that bring "the inevitable yoke." The student may matriculate at fifteen instead of seventeen, and yet lose all that really counts.

ROYAL DRAWING SOCIETY.

ON the opening evening, Mr. T. R. ABLETT read a paper on "Natural Drawing," with lantern illustrations. These proved how successfully the powers of visualization can be trained in children; some was the work of little artists under ten. It would, however, have been better if their work could have been limned in more decidedly for lantern purposes; such training has a very special importance in developing the powers of observation. Was it not Ruskin who declared that a hundred men can talk for one who can think, and a thousand think for one who can see?

SIMPLIFIED SPELLING SOCIETY.

AT the Annual Meeting, on Tuesday, January 4, the President, Prof. Gilbert Murray, in his address, put forward, with his usual felicity and freshness, the several arguments in favour of spelling reform that are familiar to readers of *The Journal*, but in insisting that, so far from calling a truce, the Society was bound now more than ever to fight on, he made a new point. Among the causes of the War not the least potent were the national antipathies, culminating in active animosities, but engendered mainly by misunderstandings, due to ignorance and lack of intercourse. Our hope and aim is to establish after the War closer intercourse between neighbouring peoples, and one clear step in that direction was to remove the foreigner's main difficulty in learning English.

Dr. MACAN (Master of University College) gave a witty account of his conversion to the spelling reformers some forty years ago by Max Müller, his temporary lapse by reason of Bell's "Visible Speech," too perfect for common mortals, and his return to the fold of the S.S.S.

Mr. W. B. STEER, President of the N.U.T., and Prof. WALTER RIPPMAAN, also testified to the work of the Society.

Sir FREDERICK POLLOCK gave an interesting classification of the chief European languages in order of phonetic merit: Class I, Spanish and Italian; Class II, German and Russian; Class III (in order of demerit), French, modern Greek, and English.

WE are requested to state that the full report of the Conference of Educational Associations will be published shortly, containing the full text of the Presidential Address by Sir Oliver Lodge, and also the papers read at the various meetings. Orders for copies (price 1s. 6d., to cover postage) should be sent at once to F. Fairman, 9 Brunswick Square, W.C.

THE LABOUR PROBLEM AND DENMARK.

AFTER the War things will never be the same again, and it may be well for those of us who realize this, and especially for all educationists, to be reflecting on the task that lies ahead. In *The Future of England*, published three or four years ago, Mr. George Peel reinforced the appeal to Ministers first urged by Matthew Arnold to organize our secondary schools. In *Darkest England*, General Booth had contended that there is more readiness on the part of the masses to follow a good lead than there is directing capacity amongst its rulers.

The political, social, and economic conditions of Greece and Rome differed too widely from those of the present age to afford us much practical guidance. By examining countries which have faced and solved difficulties resembling our own, we shall understand better and profit more. In 1915 Mr. Harold Foght, of the Washington Bureau of Education, published the results of a careful, minute inquiry of the remarkable prosperity which Denmark has enjoyed for fully a quarter of a century. He tells the United States that it has everything to learn from this tiny European country, one of what William Watson has styled "the great little peoples." Denmark's area is one-eighteenth of the State of Texas. Great Britain, too, may easily learn some important lessons from a kingdom whose size is so insignificant. In pre-Norman days she was conquered by the brave Danes to the point of yielding them half of England, and of suffering Danish laws, customs, and language to exist on the footing of absolute supremacy in the Danelagh.

Mr. Foght poses the question: "How has Denmark arrived at the point of possessing the best ordered agricultural system in Europe?" His answer is that it is due to education, and much more to a good general education, than to specialization. Denmark has solved the great problem of combining with manual labour a sound general education. She reaps enormous profit from a combination so desirable. And yet political circumstances have handicapped her heavily. In 1848, when Europe was seething in the revolutionary melting-pot, a great disaster befell Denmark. Germany perceived the discontent in two of her important provinces—Slesvig and Holsten. The bureaucracy, commerce—and, to some extent, the nobility—of the two provinces became Germanized, and, in 1864, Germany took possession. It seemed as if Denmark's sun had set, and as if a lethargy of despair might overwhelm this brave people. On the contrary, they braced themselves for a great struggle with Nature. They began the reclamation and afforestation of the heaths and bogs of Jutland; they reclaimed the moor and the sandy dune for pasture and arable land. They ran the surface water into the channels of rivers deepened to receive it, and made new canals. The land was poor, the climate foggy and unfavourable. The acidity of the soil was treated with chemicals, especially with marl, of which 1,700 deposits were discovered. State-owned railways, working for the welfare of the community rather than the aggrandizement of shareholders, transported marl at trifling cost. Up to 1880, there had been a marked movement of population to the towns, although Denmark was an agricultural country. Not only was the movement arrested, but the tide turned; the rural

population has increased to a marked extent. It was a shift back to the land, and, moreover, the people are happy and contented. None of that restless dissatisfaction with rural conditions, which is so marked a feature in many countries, can be observed in Denmark. Its government exists for the common weal, not merely for the advancement of great interests. Certain features strike even careless observers. The most important of these is that the land of Denmark is chiefly owned by the cultivators, and that the State has encouraged them to become the proprietors. Only one-fifteenth of the Danish farmers are tenants; all the others have become owners.

One object of the Credit Unions (land banks) is to aid the cultivator in purchasing his holding. There is an immense number of small holdings. Out of 260,000 farms, 116,000 are $7\frac{1}{4}$ acres and under. The law forbids the combination of separate holdings under a single owner. The great proprietors are leading in the movement to parcel out large estates; there only remain some twenty-two estates of 540 acres and over. During the last few years several proprietors have voluntarily divided their estates, even when their tenure was privileged.

Farmers are very important persons in Denmark. Many have seats in the Riksdag, where they form the dominant party, control and direct the policy of the Government. They appreciate and uphold education; they pay handsomely for it; and teachers are satisfied. The men most honoured in Denmark are not those who hold a lien on the labour of others by stocks, shares, and exaggerated profits, but the preacher, teacher, and economist. Manual work is held in high honour, and especially the land is regarded as holy.

It is perhaps not too much to say that the resources of the State are at the disposal of the cultivators. At every turn they receive from it expert assistance and advice; they use it as British people do the Post Office. Stock-breeding and feeding, poultry and fruit farming, improving the soil by fertilizers—whatever the farmer wishes to do, in whatever quandary he finds himself, the State is there to aid and direct him, to set him on the right path, recall him from the wrong one. Expert advice and assistance is his by right.

The whole of the Danish system of agriculture rests on co-operation, on a wonderful system of mutual helpfulness, and pooling of labour. The system demands, and rests on integrity and high character; the foundations have been well and truly laid in the schools. Denmark's chief products are bacon, butter, cheese, eggs. Her reputation is bound in with her Government stamp. Signs of agricultural co-operation meet the visitor at every turn. The Danes produce by co-operation, as in their bacon factories and dairying; they buy co-operatively seeds, fertilizers, implements, fodder; they sell co-operatively—their markets are found by this means.

Observers all notice that a successful effort is made to keep the agricultural population in the rural areas. Life is made interesting, attractive, fairly complete. Exodus to the towns does not take place because it does not spell betterment for the immigrants. They are content to stay.

Denmark receives innumerable visitors, who inquire into the causes of her success. All are agreed, even a renowned co-operator like Sir Horace Plunkett, that it is a triumph of education. The entire development is prepared for, expected. "It's not technical instruction," said a leading Danish educator and agriculturist; "it's the humanities." Denmark possesses the usual education ladder of elementary schools, middle schools, and gymnasiums up to the University. But its system has two unique features which deserve brief examination. Children leave the elementary schools at fourteen or fifteen. At this age it is recognized that, up to the age of eighteen, the physical in the human being seems to have the upper hand; intellectual attainments are acquired chiefly under compulsion, and often at the sacrifice of health. Danish thinkers are satisfied that the years of adolescence should be devoted particularly to physical development and practical work rather than to classroom routine. It is to be a period of work and play; therefore the young people learn practical agriculture and household duties at home, or they

are apprenticed to model farms, where they often pay for the privilege of working. This is the program for rural young folk.

The second unique contribution of Denmark to education is her seventy-nine Folk high schools, which educate the men and women who take up farming as a business between the ages of eighteen and twenty-five. They are not agricultural schools; they exist exclusively for general culture. Thirty-one offer courses in agriculture, but maintain the ideal of broad, general culture. There exist besides twenty-three agricultural schools which are technical schools proper, and which usually receive their students from the Folk high schools. The buildings of the latter are sometimes admirable, but Danes consider that their schools stand for a faculty of able, consecrated leaders rather than piles of brick and mortar. Since 1844 sixty-six of these schools have disappeared. When the animating spirit languishes, they cease to be. There are in Denmark no decayed foundations. At a recent date there were 3,603 men and 3,104 women in these schools.

The basis of the instruction is history; a very large place is assigned to song, gymnastics, and the Danish language. Every lecture begins with song—all students sing. The dead languages are not taught; some schools teach English and German. Mathematics is taught historically. There are courses in surveying, geography, physics, chemistry, biology, sanitation, Nature study. All have handwork as well as various branches of household economics for young women. The teachers are distinguished by inspiration and enthusiasm. Many of these schools are privately owned; others are organized by a society not working for gain. Patriotism is inculcated, but it is a patriotism taught to perceive its own errors in the past.

The Folk high schools are absurdly cheap from the English point of view, a point that usually regards all the best things as the lawful due of wealth. Men usually go to the schools for five winter months; tuition, board, and lodging cost under £10. Women use the schools during the summer, and pay nearly £5 for three months. The main object of the schools is a good general education, the broadening of the student's horizon and mental outlook. A French pastor, the Rev. C. Wagner, who scanned society with much acumen, declared that he saw teachers, scientists, doctors, lawyers, priests, artists, but could not perceive the *man*; he had been sacrificed to the career. In the Danish Folk high schools they postpone the evolution of the specialized worker. They find time for him afterwards, and produce a finer article because the fruit has not been forced too early.

C. S. BREMNER.

DR. GARNETT.

AN APPRECIATION BY DR. KIMMINS.

MY knowledge of Dr. Garnett goes back to my undergraduate days at Cambridge, where he was such a prominent and well known figure. His fame as a mathematician and physicist filled me with awe, and I was not a little concerned to find that at one of my University examinations he was to examine in Physics. My *viva voce* on that occasion will live long in my memory. Dr. Garnett, in interrogating me, balanced himself on his chair in a rather perilous position and, probably startled by some absurd answer I made to one of his questions, he lost his balance and fell to the ground. I rendered first aid, and the remainder of the interview was of a less formal character than that which generally marks *viva voce* examinations.

Dr. Garnett was one of the most popular of Cambridge dons, and Mrs. Garnett's At Homes were always regarded as delightful functions. Dr. Garnett very frequently acted as Examiner in Physics both at Cambridge and at London. As such he was somewhat dreaded because he always seemed to take too generous a view of the knowledge possessed by

the normal undergraduate. Similarly, as a writer of textbooks it was the scholar and expert who found them delightful. Garnett's "Heat" was probably one of the finest textbooks ever written on the subject, but the ordinary man found it difficult. Dr. Garnett's wonderful grasp of the subject made it difficult for him to realize the awful gulf which separated him from his reader.

To the great regret of University circles he left Cambridge in 1882 to become Professor of Mathematics, Physics, and Mechanics in University College, Nottingham. He remained there only two years, as in 1884 he was appointed Principal and Professor of Mathematics of the Durham College of Science, Newcastle-upon-Tyne. It is common knowledge that this College developed in a remarkable way under his wise and stimulating guidance.

With the T.E.B.

In 1893 Dr. Garnett left Newcastle to become Secretary of the Technical Education Board in London, and in 1894 I was most fortunate in being elected a member of his staff. The Technical Education Board was housed in uncomfortable quarters in St. Martin's Lane, but we were a very happy and united group of officials. Our great anxiety was that our chief would break down under the severe strain of his work; for those were strenuous days and Dr. Garnett never spared himself. Throughout his life he has always been most considerate of others but never of himself. Every item of the agendas of the Sub-Committees and of the Board received his personal attention to the minutest detail. We all marvelled at his extraordinary memory and his intimate knowledge of every branch of scientific work. The London Polytechnics, in which he always took the keenest pride and interest, owe an enormous debt to Dr. Garnett's wisdom and to his unflinching support in all directions of useful developments. Quite apart from his official duties his unique knowledge of engineering and building made his advice of special value, and he was consulted by all sorts of people on a variety of subjects. Dr. Garnett was never too busy to render assistance to those requiring expert guidance. His energy and enthusiasm were inexhaustible. He took special interest in the teaching of domestic economy and surprised the staff by his wealth of knowledge of housecraft. It is well known that, when he was at Cambridge, his appointment as Bursar of St. John's College resulted in a marked improvement in the college dinners at, I believe, a considerably reduced cost. Probably this interest in feeding, which was purely a theoretical matter as far as Dr. Garnett himself was concerned, started those investigations in food values which made him such an authority on domestic economy affairs.

We were devoted to our chief, and I shall always look back to my long association with Dr. Garnett as one of the greatest pieces of good fortune of my life. During the ten years I was with him at the Technical Education Board I never heard any colleague speak of Dr. Garnett in anything but terms of affection and loyalty. He was always transparently sincere and had a cordial loathing of anything in the nature of untruthfulness or deception. There were no class distinctions at the Board and his unflinching courtesy to the most lowly placed official was very marked.

As Educational Adviser.

In 1904 the work of the Technical Education Board ceased and the London County Council took over the control of all forms of education. Dr. Garnett's work as Educational Adviser is too well known to need comment. His reports to committees on every conceivable subject have always proved of great interest and value and have, moreover, always shown a rich background of fine scholarship.

The Education Offices will seem strange without the well known figure and genial personality of the Educational Adviser, and it would be a positive disaster if Dr. Garnett's extraordinary ability and encyclopædic knowledge were lost to the cause of education and to the community. Fortunately, however, there are many ways in which he will have

opportunities of making use of the vast stores of information he has acquired in scientific and educational matters in the solution of many important problems. In any work he may undertake we wish him every possible success.

OBITUARY.

WALTER LIONEL PAINE.

By the death of Captain W. L. Paine in Gallipoli we have lost not only a gallant soldier but also a gifted teacher and a pioneer in educational reform. He won an entrance scholarship at Oundle School in 1894, and there the greater part of his professional life was spent. Captain of the School in 1899, he matriculated at Sidney Sussex College, Cambridge, was in due course elected Senior Classical Scholar, and in 1902 graduated in the Second Class of the Classical Tripos, Part I. Two years later he joined the staff of his old school, where he succeeded to a House. It was a bold venture to take a year off and enlarge his experience as an assistant in a French *lycée*. But it was by attending in 1911 the First Summer School of Latin at Bangor, organized by Dr. Rouse and Prof. E. W. Arnold, that he was converted to the Reform Method in Latin and threw himself heart and soul into the movement, becoming one of the Secretaries of the Association and an active propagandist. He not only preached, but he practised. In the Whitgift School, Croydon, whose staff he joined in 1911, he found full scope for his energy and abilities.

On the outbreak of the War he at once decided to join the Forces, and enlisted in the Grenadier Guards. In December 1914 he was given a commission in the 10th Battalion (King's Own) Loyal Lancashire Regiment, in which he was quickly advanced to be Captain and Adjutant. In May 1915 he sailed for the Dardanelles and took part in the general attack of June 4. He was reported among the missing, and, after some interval, his death was officially confirmed. Of his work as a teacher a colleague writes:

As a teacher he succeeded by his simple faith and example. By nature retiring, he contrived to minimize his *personal* influence upon the boys, preferring to develop the individuality he found in them rather than impress his own upon them. For teaching in the sense of the giving out of knowledge he had no love. The boys should seek and find for themselves, while the teacher's part was to create the motive and afford the opportunity. Their activities must arise, not from such motives as marks or prizes or even a desire to please the teacher—all of which he deprecated as artificial—but from an interest in the things they were doing, from a love of doing them well, from the joy of self-expression. It was because the methods of teaching that he advocated lent themselves to the practice of these ideals, that he pursued them with such ardour, and it was to them that he attributed any success he gained. Those who had seen him teach, however, know that his success was due, in a far greater degree than he would have admitted, to his own personality. From his belief that what was being done in the classroom was worth doing, the boys themselves caught the spirit of his sincerity and enthusiasm.

A. D. DARBISHIRE.

The sudden death of Mr. A. D. Darbishire adds another to the list of brilliant young Oxford scientists whom the War has taken from us in untimely fashion. Mr. Darbishire was in America when the War broke out, having been invited to give a course of lectures on "Heredity" at the Graduate School, held under the auspices of the American Department of Agriculture. When he got back to this country he was at first debarred from active service by health, but afterwards enlisted in the 14th Argyll and Sutherland Highlanders. He had just been granted a commission in the Royal Garrison Artillery when he was attacked by cerebral meningitis and died after a very short illness at Gailes in December.

Mr. Darbishire was an undergraduate of Balliol from 1897 to 1901 and afterwards Demonstrator in Zoology at the Museum. He was afterwards a Lecturer at Manchester University, and then at the Royal College of Science. In

1911 he was appointed Lecturer in Genetics at Edinburgh University.

Mr. Darbishire was best known for his elaborate experiments in Mendelianism and the brilliant book in which he expounds the results of these experiments, *Breeding and the Mendelian Discovery*, but his best work was to come. He had great scientific gifts, an overflowing interest in facts and immense powers of patient observation, the most alive and impartial of minds, to which he added a wonderful zeal for words and language which made him a masterly expounder of scientific discovery. He had a Bergsonian sense of humour which made him quick to detect and expose all that was merely mechanical in scientific work. It was the expression of his own overflowing vitality and made him a sworn foe of all attempts to make biology a lifeless science and an enthusiastic admirer of Samuel Butler and Bergson. He was the least bookish of scholars. He cared intensely for Nature in its smallest details and for great creative work in music and poetry and the works of the great scientists; for the mass of mediocre scientific books, very little. One of his reviews in *Nature* began with the words: "The author of this book does not come to us fresh, red-handed from the struggle with Nature. If he had to wash his hands it was to remove the dust of books." He was himself the very opposite of that. He hated what was secondhand and distrusted all "-isms." He took a delight, sometimes boyish but always genuine, in calling things by their real names, which, if it gave the susceptible some shocks, meant for the sympathetic many a thrill of delighted vision—for it was not only spades that he called spades. "Words are wise men's counters, they do but reckon by them: but they are the money of fooles, that value them by the authority of an Aristotle, a Cicero, or a Thomas, or any other Doctor whatsoever, if but a man." He loved his counters, but loved also to expose the attempts of "fooles" to coin them into money.

His magnetic enthusiasm made him a great teacher. I remember well the effect he had on a party of tutorial-class students at the Oxford Summer School. Lectures in science were an experiment then, but the students came out of their first lecture with economics and political theory forgotten for the moment, and inspired by a vision of what science might be. But for the War he would have completed a book in which he was trying to express his thoughts of what biology ought to be. It is hoped that what he had written of it may be published. A. D. L.

MRS. R. W. EDDISON, LL.D.

THE death of Mrs. Robert Eddison, which occurred on January 2, removes from the City of Leeds one who, for a generation, has been the pioneer of local enterprise in the education of women, a prophet honoured in her own country (she was one of the two honorary women graduates of the University), deeply respected, and now most sincerely mourned. As Honorary Secretary of the Yorkshire Ladies' Council of Education she was long the moving spirit in all their educational undertakings, and her services to the Leeds Girls' High School and to the Yorkshire Training School of Cookery and Domestic Economy, of which she was so long the life and soul, will long be remembered with gratitude. But Mrs. Eddison's influence extended far beyond the city of her adoption (she was of American birth). From the first to the last she was Hon. Secretary of the National Union for the Technical Education of Women in Domestic Science, and no one in the country gave greater or more enlightened service to the cause of domestic education.

She had a real gift of organization, a wonderful power of concentration, a readiness to adopt fresh ideas, and, above all, an unusual capacity for quiet and persistent work. Her breadth of view, her quick perception, her power of keeping herself and others to the question at issue, gained for her a remarkable reputation as a woman of affairs and won the respect and confidence of administrators and men of business. This was furthered greatly by her fine demeanour of reserve. She was not a woman of words; she made no attempt to

cultivate a gift of facile or persuasive speech; she shrank, indeed, from any public appearance or public praise, and only as a stern duty spoke outside a committee room. But she was known for her wisdom, her sincerity, her disinterestedness and her beneficent aims; she was a personality and a living force, and she prevailed by the strength of great and sterling qualities of mind and heart.

To the last she was deep in projects for the furtherance of the objects which had been her life-work, and at seventy-two she evinced the same strong enthusiasm, freshness of spirit, and gracious courtesy that had characterized her throughout her noble and most serviceable life. The impulse of those among whom she stood eminent has given the women of England the opportunities they now enjoy for obtaining an education in arts which deeply affect human happiness and human welfare, and which in the emergencies of the hour are seen, as never before, to be of primary importance to the life and wellbeing of the nation. One can wish for women's work and women's causes no greater good fortune than the leadership of women like Mrs. Eddison.

A VISION OF PIERS THE PEDAGOGUE.¹

SEEN AFTER SOME SUPERFICIAL STUDY OF ALLITERATIVE SCANSION.

IN October terme . when the leaves weren turning
 Skimpy and scattered . as a scolemaster's haire,
 Whenas the burgh forbad . bright lights abroad
 Somewhere south of Spitzbergen . (The Censor wot where).
 In the withdrawing-room after dinner . discoursed I dogmatik
 Facing from the fireplace . fiendish gossip.²
 When sodenly appeared . a parloure-mayde panting,
 Scared nigh to screaming . and scantily y-clad.
 Here was something, sayde she . that seemed like a Zeppelin,
 As by the sounde and smelle . a maide mote discern.
 Rudely rushing forth . outranne we the womene;
 Frantik folke found . already forgathered. [nesse.
 There was Donne the draughtsman . made ado abouten derke-
 Him were liefer to limn it . quoth he, withouten light.
 Mike the musicien . made out the note
 Of the buzzyng bourdon . he sayde it was B.
 Ac Muggs a master . a mathematicien
 Broghte tables of trigonometrie . the highte for to take.
 From a boyes-house y-born . a boutte of cheering
 Shewed they had burst here bounds . and were out of bedde.
 Explosiouns plese hem . they marked the places,
 They ticked off the time . that the sounde traveled.
 For on the morrow morning . wolden masters sette essaies,
 Wel wot they, to wnesse . what they had seen.
 Muchel mark-hunting . marreth here efforts:
 As a priest for pardonnes . they chaffer³ for places.
 On the morrow morning . manye hadden an accidie⁴
 Grande tales were growing . thilke nould not agreeen.
 As, plump at the Pleiades . we had planted oure shellen
 Or as we had to-broken . the Grette Beares taile.
 Quoth Paul the punster . they putten one in the pigge-stye⁵
 Because they smelt sausagen . the butcher for to save.
 But me thoghte it trewely . a hevene riche⁶ sonde
 And for brutish boyes . not mete to brag of:
 For hadde they in the beginning . more grammair y-gotten
 Then sely⁷ long since . had they soared aboven Zeppelins.

G. K.

¹ The text of this recently discovered fragment has plainly undergone much corruption as regards the diction and spelling, and perhaps even the sense, at the hands of modernizers.

² Some commentators gloss this "contentious talk," others "infernal friends." I am doubtful which to adopt.

³ Trade. The writer condemns the mark system as mercenary.

⁴ Fit of slothfulness, often induced by much heavenly contemplation. (See Skeat's *Etymological Dictionary*.)

⁵ Here the author seems to depart from the facts. The actual casualties in his district were one rat, one mouse, a few hens, and a swan.

⁶ Heavenly message, visitation.

⁷ I am divided between the earlier meaning of "blessed" ("selig") and the latter of "silly," "insane." Perhaps the term "blessed idiot," often applied to modern Germans, gives the needed link.

PUBLISHED BY MACMILLAN & CO., LIMITED

Homer and History. By WALTER LEAF, Litt.D., Hon. D.Litt. With Maps, 12s. net.

THE NEW STATESMAN.—"We are, however, much more attracted by his other chapters on the Achaeans, the authenticity of the expedition to Troy, Homeric gods and men, and the problems of the composite Greek religion. Here we recognize gladly a return to common sense, to what the average reader set down to the Iliad would naturally believe. . . . Dr. Leaf's chapter on 'Gods and Men' is eminently sensible, and on the whole question of religion due to the fusion of races he takes a refreshingly sober and moderate view."

Caesar and the Germans Adapted from Caesar, "De Bello Gallico," and edited with Introduction, Notes, Vocabulary, &c., by A. H. DAVIS, M.A., sometime Classical Scholar of Trinity College, Cambridge, &c. With Illustrations. 1s. 6d. [*Elem. Classics.*]

THE SATURDAY REVIEW.—"Mr. Davis has welcome ideas in the teaching of Latin, for which boys will be grateful. This, too, is a neat little book for the mature reader of Latin, bringing together all Caesar's sayings about the Germans—sayings which are remarkably apposite to-day."

The Life and Adventures of Robinson Crusoe. By DANIEL DEFOE. Abridged and edited for Schools by J. HUTCHISON. Illustrated, 1s. [*English Literature for Secondary Schools.*]

The Cheapest Prospectuses

are those that

Produce Pupils.

AND THEY ARE THE ONLY KIND WORTH HAVING.

There are few items of School expenditure on which money is so commonly and **needlessly wasted** as the average Prospectus.

An unsatisfactory Prospectus works a **double injury** to any School:—

It uses up so much capital to no good purpose;

And, so long as its useless bundles have not been got rid of in some fashion, it blocks the way for anything better.

Not every Principal has the courage to scrap heaps of futile productions that have cost good money in the past. If it were realised that they are **costing more still** each time they lose or repel a possible Pupil, their fate would be swifter. For, obviously, if a Prospectus does not attract, it is a failure, and worse—it is a handicap. A School has one chance with a Parent: if from any reason the chance is lost or wasted, it does not come again. It is a pity if the reason is its own Prospectus. And very often it is.

As Educational Agents we have to file the Prospectuses of many hundreds of Schools, and make the best use we can of them; so that their weaknesses or omissions, affecting our daily work, become very familiar. These are a few of the most common:—

VIEWS.—Conventional.

Badly selected.

Poorly photographed.

**Unsatisfactorily (but not always
inexpensively) reproduced.**

LETTERPRESS.—Type ill-chosen and ineffective.

**Matter bald and uninteresting, poorly
arranged, and often avoiding or
slurring over what would give a
School an individuality of its own.**

AN EFFECTIVE PROSPECTUS should be well planned, and, to some extent, original. It should be so written and so printed as to impress on a Parent at once some clear idea of what the School has to offer. The photographs should be good and well produced, and they need not be just the same as a Parent will find in three out of four others lying beside it.

**WE TAKE THE BEST PHOTOGRAPHS,
WE MAKE THE BEST BLOCKS,
WE DO THE BEST PRINTING,
WE DESIGN AND PRODUCE THE
BEST PROSPECTUSES.**

And, since no Prospectus but the **best possible** can do a School justice,

WE SEND A REPRESENTATIVE,

when required, to advise as to the arrangement, and, if desired, to write up the matter of the Prospectus with the Principal. And, as we have to use the Prospectus afterwards in recommending the School, we have, besides an added interest in it, at the same time obtained first-hand impressions and knowledge of the School, which must prove of the **greatest assistance to Parents.**

If you are interested, please write us—

TELEPHONE: CENTRAL 6313.

TUTORS.—Over Thirty Tutors, Graduates
in very high Honours (Medallists, First Class
Honours, &c.).

POSTAL CLASSES.—The Institution has
specially prepared Courses for many University
and Medical Examinations. Fees moderate.

SOME SUCCESSES.

Oxford Higher Local, 1903-14 - 172

Candidates in various Sections.

Cambridge Higher Local, 1892-1915 - 1840

Candidates in various Groups: 198 First
Class; 350 Marks of Distinction.

Cambridge Teachers' Certificate, 1905-14 42
(Only two failures.)

M.D. (Lond.), 1901-15 - 217
(Including 14 Gold Medallists.)

SCHOLARSHIPS.—The Institution has
prepared many candidates successfully for
Entrance and other Scholarships—e.g., Christ
Church; Wadham College; Lady Margaret Hall;
Somerville College; Trinity Hall; Newnham
College; Royal Holloway College; St. George's
Hospital; Guy's Hospital; the "Hugh Conway,"
University College, Bristol; First Senior
Moderatorship in Natural Science, Dublin
University.

PROFESSIONAL PRELIMINARY.

The Institution has prepared many Candidates,
by post or orally, privately or in class, for various
Entrance Examinations to the Medical and
other Professions.

Laboratory work for Science Students.

CERTIFICATES OF PROFICIENCY

in Modern Languages and Religious Knowledge
(Cambridge University). The Institution has
successfully prepared candidates for these.

CAMBRIDGE HIGHER LOCAL.

GUIDE (35 pages, advice as to books, useful
statistics, &c.) sent gratis to any candidate.

the office by **March 25th.** Urgent Notices of
Posts Vacant and Wanted can be received up
to **March 27th** (first post).

**THE
BERGMAN ÖSTERBERG
PHYSICAL TRAINING COLLEGE,
DARTFORD HEATH, KENT.**

Trustees:

Sir GEORGE NEWMAN, M.D. (Chairman).
Major WALDORF ASTOR, M.P.
Dr. CHRISTOPHER ADDISON, M.P.
Lord SHAW OF DUNFERMLINE.
The Marchioness of SALISBURY.

Principal:

Miss M. H. MEADE, B.A. (Moral Sciences Tripos).

Vice-Principal:

Miss A. WIKNER (Royal Cent. Inst. of Gymnastics, Stockholm).

The College was opened in 1885, and was the first of its kind in England. Students are prepared to be teachers of Scientific Physical Education on Ling's Swedish System. The Course extends over two years. It includes the study of Anatomy, Physiology, Theory of Education; the Theory and Practice of Gymnastics, Massage and Medical Gymnastics, Dancing and Outdoor Games. Students practise teaching in schools in the neighbourhood. The College stands in its own ground of 15 acres, in a beautiful and healthy locality close to Dartford Heath.

The demand for mistresses of physical training holding the Diploma of this College is at present far in excess of the supply.

The course begins in September. Further particulars may be obtained on application to the SECRETARY.

**BERGMAN ÖSTERBERG

CONTANSEAU'S POCKET FRENCH DICTIONARY.

NEW AND REVISED EDITION. JUST PUBLISHED. Demy 16mo. Price 1s. 6d. net.

A POCKET DICTIONARY

OF THE

FRENCH AND ENGLISH LANGUAGES.By **LÉON CONTANSEAU.**

Not only has the Dictionary undergone a thorough revision, but the work has been completed in many ways. Thus, a great many new scientific words have been added. Naval and Military terms will be found in great numbers, special attention being given to all that concerns Aviation; also land, ocean, and submarine warfare.

Some new words that have only come into current usage since the year 1914 will nevertheless be found in both languages. No pains have been spared in consulting prominent men of the day, so as to ensure correctness and enhance the value of the work, which will be found to maintain its old standard of excellence for all English and French words of common parlance, &c.

THE DAWN OF CHARACTER:**A STUDY OF CHILD LIFE.**By **EDITH E. READ MUMFORD, M.A.,**

Lecturer on "Child Training" at the Princess Christian Training College for Nurses, Manchester.

The Child.—"This is a book which will rank with the works of the masters of child study. We commend it without reservation to all desirous of possessing a reliable and rational guide to a child's character-building."

The Inquirer.—"It contains many illuminating stories, many wise reflections, many helpful principles, and it is permeated by a spirit of love and reverence for little children, which ought to be the basis of all scientific study."

BY THE SAME AUTHOR.

JUST PUBLISHED. Crown 8vo, 1s. 6d. net.

THE DAWN OF RELIGION IN THE MIND OF THE CHILD.

Morning Post.—"Mrs. Mumford's book will be very helpful to those who think that no time or trouble can ever be wasted on the fascinating craft of character-building."

The Times.—"It is full of the knowledge gained by experience and interpreted by sympathy."

Crown 8vo, 4s. 6d.

THE MENTAL AND PHYSICAL LIFE OF SCHOOL CHILDREN.By **PETER SANDIFORD, M.Sc. (Manchester), Ph.D. (Columbia),**

Professor of Education in the University of Toronto; formerly Lecturer on Education in the University of Manchester.

School World.—"A very painstaking piece of work, more comprehensive in its scope, and more 'up to date' in its information, than any similar English treatise with which we are acquainted."

Secondary Education.—"Dr. Sandiford has produced a work full of information and of reflective thought."

London Teacher.—"To the best of our knowledge, no other volume which has yet appeared in England has attempted to deal within the same covers with the connexion between the child's mental and physical development. It is undoubtedly an extremely valuable handbook for teachers."

SECOND EDITION. THIRD THOUSAND. 4s. 6d. net.

INTRODUCTION TO EXPERIMENTAL EDUCATION.By **ROBERT R. RUSK, M.A. (Glasg.), B.A. (Cantab.), Ph.D. (Jena).**

The Journal of Education.—"It will be found extremely attractive to all those who have any real interest in education. It is the only book in English that gives a systematic account of the whole field of experimental pedagogy. It is thoroughly well suited to serve as a textbook, while its copious references to English and foreign literature on the subject make it invaluable to the advanced student."

Journal of Educational Psychology (Baltimore, N.J.).—"This is a book which has been much needed in English. Based on Meumann's 'Vorlesungen zur Einführung in die experimentelle Pädagogik,' it condenses that writer's lengthy discussions into a brief compass, and focuses attention upon the work of English and American investigators in this field. We bespeak for the book a wide adoption as a text in college classes in education."

LONGMANS, GREEN, & CO., 39 Paternoster Row, London, E.C.

The opening up of a NEW CONNECTION.

If particulars of YOUR SCHOOL are included in the next issue of

PATON'S LIST of SCHOOLS and TUTORS

they will be seen by thousands of Parents seeking Schools.

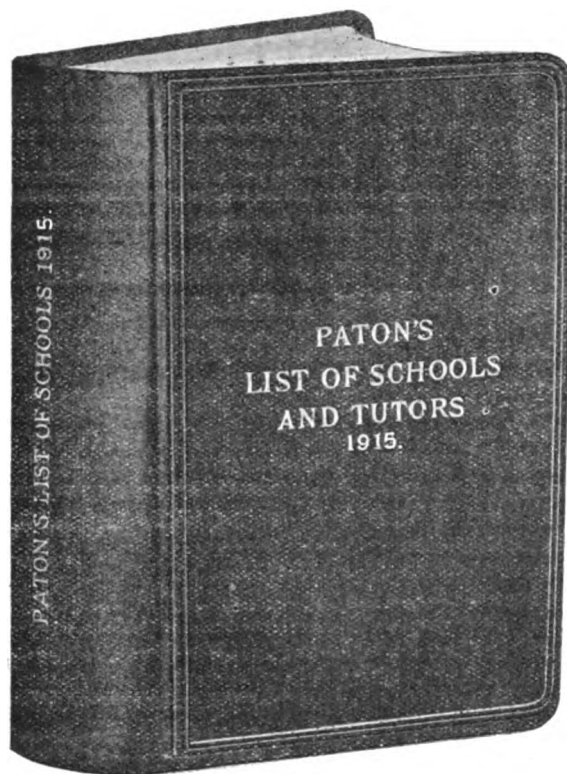

"There is an absolute necessity for advertising; there is a great eagerness to compete for attention, and no one gets it unless it is by giving, as it were, so many strokes of the hammer, one after the other, to compel people to notice what is going on."—W. E. GLADSTONE.

THIS BOOK secures a far larger proportion of *definite results* than any other publication of its kind.

OFFICE OF THE
DEPUTY PUBLIC TRUSTEE,
Manchester.

19th January, 1916.

"I am directed by the Deputy Public Trustee to thank you for the copy of your List of Schools, which he desires me to say will prove exceedingly useful to him in connection with the administration of many estates."

"The majority of my boys come, of course, from personal recommendation, but I may say that of those who come as a result of advertising, practically all have heard of the school through your List of Schools."

HEAD MASTERS or HEAD MISTRESSES wishing to have their Schools included in the *Nineteenth Edition*—which is just going to press—should apply *at once* to

J. & J. PATON, Educational Agents,

OCCASIONAL NOTES.

THE Memorandum of the thirty-five scientists which appeared recently deserves very close attention. Ostensibly designed to direct public notice to the effects of science upon war, it is in reality a strong plea for a better place for science in schools and Universities.

Science in Education.

As a nation we lack not only science, but also respect for it. This great defect is apparent in the ministry, in Parliament, in the Civil Service, in the industrial and commercial world, and amongst the general public. The Navy and the Army Medical Service are almost the only bright spots in the general darkness. Practically no heads of colleges or head masters of schools are men with scientific training. Science is still optional for Sandhurst, and the marks assigned to it in Civil Service examinations are much lower than those allocated to the classics. If in these examinations scientific subjects were put on an equal footing with literary, the effect would soon be felt in the training given at the public schools. Drastic reform in these public examinations is the first step towards the needed reforms in education.

WITH the general position taken up by the authors of the Memorandum we are not disposed to disagree, nor do we quarrel with the suggestions that they make.

The First Need.

More head masters who are scientists, more scholarships for science, and more marks for science in public examinations—all this we would gladly support, with the proviso that the arguments used by the *savants* apply quite as forcibly to

modern languages, history, and geography as to physics and chemistry. Let all modern studies have an equal stimulus, and we feel sure that the humanities will be able to take care of themselves. But the increase of science is not the first and most essential need of public-school education. The whole question of the subjects to be taught is secondary. The spirit of the teaching is more important than the matter. The urgent needs of the schools are strenuousness in work and exactness in thought. Whatever the subject is, it must be so treated that it provides at once a stimulus and a discipline, that it develops the intellectual powers, and cultivates a capacity for hard work. We are no out-and-out supporters of Latin and Greek, as our readers know well, but we would infinitely rather have the classics taught in this spirit than modern languages and science in a dilettante or a pedantic spirit. The German devotion to science is not specially fostered by the teaching of science in German schools. As a matter of fact, the place of physics and chemistry in the time-table of the *Gymnasien* is less than in that of our public schools. It is rather only one manifestation of a spirit of industry and thoroughness which is produced by an education which, though mainly literary, is directed to encouraging hard and exact thinking.

ONE of the complaints made in the Memorandum is that scientific men are allowed no part or share in the government of the country, only one scientist, Lord Playfair, having ever reached Cabinet rank. But surely the fault lies at least as much with the scientists themselves as with our system of education. The House of Commons is open to whosoever can get elected to it, and in the House there is neither Jew nor Greek, scientist nor scholar, but every man finds his level, and is valued for his capacity. Let biologists and chemists show that they are competent men of affairs, and there will be nothing to prevent their getting to the top. If there are any among them who are inclined to turn up their noses at the House of Commons, they may reflect that literary men like Lord Morley and Lord Bryce, and scholars such as Jebb, Butcher, and Anson, did not think themselves too good for that assembly.

PROF. GILBERT WATERHOUSE'S letter to the February Educational Supplement of the *Times* is a useful reminder that modern languages are as much a need of the future as science, and are at least as much neglected. He compares Berlin, with its 148 courses in 31 languages, with the scanty and haphazard arrangements of England, where provision for teaching anything but French and German hardly exists. The German output of linguists, he says, is as regular as the output of shells and machine guns. The masters of India, he might have added, have not yet established a school of oriental languages in the capital of their Empire. Such expert linguists as we have the War Office does not know how to use; hence the fiasco of the interpreterships. He suggests that the Government should equip in every University where they do not yet exist departments for the Romance languages, for German and the Scandinavian tongues, Russian, and Oriental Languages, which should include Chinese, Arabic, and the tongues of India. The heads of the departments must be British, he adds. We are glad that he makes this point; it cannot be too strongly insisted upon that any study which is in the hands of foreign professors, however able and devoted they are,

remains an exotic, instead of becoming part of the intellectual life of the nation. French and German literature and history will never be understood or appreciated by Englishmen till their fellow countrymen expound their value, and treat them from the English as well as the foreign point of view. The function of the foreigner in this instruction is important, but subsidiary.

THERE is anxiety in the minds of thinkers about our educational system. The splendid response of the public schools to the call of the country cannot blind the nation to their deficiencies. **Mr. H. G. Wells's Program.** Those who look ahead to the time when, instead of the fighting spirit, we shall need the spirit of thought and work are disquieted. It seems to many that our education gives neither a practical equipment for life nor intellectual capacity and an intellectual attitude towards the problems of the age. Mr. H. G. Wells, in a recent article, hits the nail on the head when he says that we want our young men to "talk less and think more," and to cultivate "philosophy" more, by which he seems to mean exact thinking on all subjects. The pity is that Mr. Wells regards science as the one instrument by which the power of thought can be cultivated, and as supplying the best training for administrators, whereas the first need of those who govern is interest in humanity, not in nature. Mr. Wells's only concession to the humanist is the suggestion that Russian and Hindustani should take the place of Latin and Greek, and that foreign teachers should be imported to give instruction in them. What would happen when the "mild babu" found himself alone with a fourth form, we leave it to our readers to imagine. Mr. Wells's program of biology, psychology, sociology, law, politics seems to us eminently adapted to produce arm-chair theorists and those very talkers whom, with such good reason, he dislikes.

IT seems hardly worth while to spend time over a writer on education who talks about the works of Plato as "a mixture of childish speculations and indescribable nastiness," urges that any one who dares to teach logic should be penalized, wants as much Latin, Greek, French, and German taught in every village school as will "enable the children to know the origin of most English words," and draws up a list of twenty-one subjects for secondary education, including Egyptology, Photography, and Comparative Religion. But the curious thing is that extremes meet; and Sir H. H. Johnston, amateur of amateurs, seems to come to the same conclusions as some of our leading professors of education. He does not believe at all in education as everybody believed in it a generation ago—that is, as the development by means of school tasks of an intellectual apparatus which can be turned to other tasks in after life. Every work in life, he says, needs for its successful accomplishment a different equipment; therefore there must be as many schemes of instruction as there are professions. You must have one kind of education for a clerk in the House of Commons, another for a Commissioner in Assam, a third for a Secretary in Uganda. A general knowledge of geography is worthless, because the geography needed by an Indian official differs from that needed by a home official. Apparently a man must stop learning when he stops growing, and training in a subject and general knowledge of it is no help to the attainment

of a specialized knowledge of some portion of it. Sir H. H. Johnston shows to what a strange pass we should be driven if we accepted the doctrines of the philosophers who deny the possibility of mental training.

SOME retrenchments in education which are being made would be tolerable enough if only we could be sure that the *status quo ante* would be restored when peace comes. Some counties, for instance, are closing very small village schools. Oxfordshire has just decided to shut up all where the numbers on the books do not exceed twenty, and hopes thereby to save about £1,000. Provided places are found for the teachers in other schools to take the place of those on active service, and no children are left stranded without a school within easy reach, this seems as harmless an economy as can be practised. But we must remember that the cost of the War will not terminate with the conclusion of peace. Considering how small a fraction of the expense is being met out of annual revenue, that charge will continue to be felt for many years almost to the same extent as at this moment, as Mr. Asquith pointed out to the House of Commons on the first day of the Session. The cry for economy in the public services will have almost the same force, the public will have become accustomed to a lower education rate, and the task of regaining the ground that has been lost will tax all our energies.

MR. ASQUITH defended the closing of museums to the important deputation that protested against it as being only one out of a large number of projected economies. What a pity that it should have been put in the forefront! If economies affecting material ease and comfort had been conjoined with those which strike at the intellectual life of the nation, less hostility would have been excited. But to begin saving by closing educational institutions is almost to justify the German sneer at us as a nation wholly given to pleasure. Pleasure, indeed, is still untaxed; though a small levy on theatres, music-halls, and kinemas would probably bring in far more than has been saved on education, and might, in addition, help to redeem our character.

NINE boys, from eleven to thirteen years of age, who called themselves 'The Black Hand Gang of St. Luke's,' were charged with breaking into shops, smashing windows, and stealing sweets and electric torches." So ran the account in the daily press. It was added that their imaginations had been fired by what they had seen at picture palaces. That is possible; the films need watching; but it is just as likely that it was a case of spontaneous combustion. These lads had the spirit of adventure, the spirit that finds even scouting and football tame and wants something with the sting of real danger in it. A fine spirit, but unfortunately there is no place for it in a modern town. In the country it might find an outlet in the comparatively venal sin of "bagging apples." What is to be done with these youthful criminals? Prison, we all agree, is out of the question, and the flogging to which three of them were sentenced may or may not prove efficacious. If it does not, and they appear before the magistrate again, there will be nothing for it but an industrial school or a training ship, unless they are for-

tunate enough to be admitted into the Little Commonwealth. In one way or another they will be brought up at the expense of the community. That seems unfair to the community and unfair to the good boys; but we suppose that it is part of the price that we pay for civilization. We like the spirit of the youngster who, being amongst those who were let off, told the magistrate that if he had any one flogged he ought to deal out that measure to all of them.

THE London County Council is about to make an experiment with the scheme of wall decoration for schools suggested by the Professional Classes War Relief Council as a means of helping artists whose occupation is gone. This is an admirable form of help for the workless, and we hope that the frescoes will be excellent as art, but for the moment we should like to think of them as statements of fact. The pictures will be illustrations of life and industry in the Dominions. They will teach the children facts. The facts so taught will be very few, but they will be taught vividly, impressively, and continuously. The weakness of our teaching of history and geography is not that we teach facts, but that we do not teach them in such a way as to make a permanent impression on the mind. We teach, or attempt to teach, especially in secondary schools, far too many. We dissipate the attention over wide areas, or scattered fragments of areas, instead of concentrating it on limited tracts. We give our pupils' minds no chance to become well saturated with any particular province of knowledge. We teach the same class the geography of India in one lesson and the history of Edward III's reign in the next. The result is that worst of all faults in education—smattering. We all know from our own experience how long it takes us to get a real grip of any new study, but we do not apply that experience to our methods of instruction.

IN another column will be found a full obituary of Francis Edward Thompson, for thirty-six years an Assistant Master at Marlborough College. We give in addition the following reminiscences from F. E. T. one of his few surviving colleagues. "I was for some ten years at Marlborough with F. E. T., and knew him well, though never intimately, as in the twenty years when we both lived in London. He was one of the devoted band of scholars whom Bradley brought with him from Oxford, of whom Franck Bright is now the only survivor. We were keen followers of the Natural History Society with T. A. Preston as our leader, and scoured the country, bringing in sometimes over two hundred specimens. The third of these "daisy croppers" was John Sowerby, a keener alpinist even than F. E. T. himself. I well remember as F. E. T. tripped out of chapel one Sunday evening when Sowerby had been reading the second lesson, his remarking, 'I could not help thinking, Uncle John, that, if you had all faith so that you could remove mountains, you would not do it.' I remember, too, his admirable acting as Master Ford in the *Merry Wives* and his tolerant rebuke when I did not know my part as Dame Quickly; but it was only in London that I came to know his finer powers, both as a scholar and a speaker. I shall not easily forget a lecture that he gave to the Working Men's College on 'The Later Roman Empire.' For an hour he talked without a note, and not

once did I find him at fault in name or date. Those who sailed with him as "Argonauts" will confirm this impression, while his *Greek Syntax* bears witness to the accuracy of his scholarship, as do his labours, known to fewer, on the Grammatical Terminology Committee. Few who joined him—it seems but the other day—in a pilgrimage through Old London could have guessed that their guide was an octogenarian. He was a Liberal-Conservative in the true sense of the word and a link with all that was best in Marlborough since the days of Ilbert and Papillon, W. E. Mullins, Franck Bright, C. M. Bull, and the Moules."

OUR great neighbours (*vive la vraie culture !*) deserve more than a word of praise for the scheme they have inaugurated on the south side of the Channel to train crippled soldiers. A useless man is an unhappy man; a trained cripple is a doubly happy man because he can help in the building up of France in the difficult days which must follow the declaration of peace, the re-establishment of industries that have been ruined or are in abeyance. Last April saw the founding of *La Fédération Nationale d'Assistance aux Mutilés des Armées de Terre et Mer*. Voluntary effort and the French Government are collaborating in the scheme; branches are already to be found all over the country. Crippled warriors of all ages, from boys of fifteen to middle-aged men who are fathers of families, rush to these schools to learn how what remains of them can serve France again; their re-education is proceeding. Men who have lost a right arm, a leg, sight, sometimes both legs, undaunted, eager to learn, cheerfully bear new and painful conditions, learn to write with the left hand, to move as rapidly as infirmity will permit, to make themselves useful to *la patrie*. Some are preparing for State examinations, others are learning to become metal-workers, glass-blowers, toy-makers, tin-smiths, carpet-weavers, shoemakers, tailors, clerks. The Federation may send the crippled *poilu* to the Union of Decorative Arts to learn some useful art; it pays for his instruction. When re-education is complete, the Federation finds the pupil employment. And yet Kultur will insist that France is decadent.

IT is announced that of the vacancies occurring in the Indian Civil Service during the War, and for two years after its conclusion, three-fourths will be filled by nomination, and that these will be reserved for men who have been on active service. As at present arranged all will be eligible whose age did not exceed twenty-four on August 1, 1915. This is not merely fair to the young men who have obeyed their country's call, but it is sound Imperial policy; we cannot have "shirkers" governing India. But we are puzzled by the provision that candidates must reach the standard attained in normal times by those who are successful in an open competition. Take the case of a boy who enlisted in August 1914, being then eighteen. If the War comes to an end next August—a far too favourable supposition, we fear—he will have lost two years' education, will have got rusty, and will find it difficult to resume habits of study. But he will have to get a great deal more than his lost two years' work into the next two years if he is to reach the standard of the Indian Civil Service. It seems to us that the nomination system ought to prevail for four or five years after the declaration of peace if justice is to be done to the soldiers.

PROF. E. B. POULTON, in delivering the third Galton Lecture before the Eugenics Education Society last month, confined himself to a direct attack on an unscientific Government. All are now offering life service to science, yet it will need nothing short of a revolution to convince the British public of the necessity for the full recognition of science by the State, and of securing among the permanent officials, not only of the Admiralty and War Office, but also of the Board of Trade, the Colonies, and the "Tite Barnacles" of the Foreign Office, the best expert opinion of the country.

ONE remedy, as Prof. Poulton pointed out, may be, and should be, instantly applied. Hitherto our Civil Service Commissioners, eminent as they have been in literature and in politics, have been wholly ignorant of science, and consequently, in the examinations both for the Civil Service and for the Army, science has taken a subordinate place. A change in the papers set and in the marks assigned would alter the whole face of education, both in our public schools and in the older Universities. It is monstrous that at the present day a cadet should enter Woolwich ignorant of the very rudiments of science, and there is no possible reason, with Mr. T. E. Page, to cry for a Peace of God while the War lasts. Is there, asks Prof. Poulton, a single great public-school head master who can profess to be a man of science?

ONE glaring instance of the incredible meanness with which men of science have been treated by the Government was adduced. Prof. Meldola is known to all as a great chemist, and some of our readers will remember him as the energetic Treasurer of the first Registration Council. Twice he was offered by the French Government—once in 1900 and again in 1907—the Legion of Honour, and on both occasions he was forbidden by the Foreign Office to accept the distinction. When the War came he was asked by the authorities to help them out of their straits by presiding over some committees, and serving on others which dealt with the relations between science and industry. He was too patriotic to refuse, but the strain was too great for one who had passed his seventh decade, and in a few months he succumbed.

LOCAL AUTHORITIES.

Schools and Farmers. THE authorities of county administrative areas will this year find themselves in a position of increasing difficulty in connexion with the demands of farmers for the labour of school children. The by-laws regulating attendance will, no doubt, have to be relaxed, and where necessary the children released for work on the land. It is clear, however, that great care ought to be exercised in making concessions. Employers of agricultural labour, as a general rule, have no sympathy whatever with education, and very little consideration for the rights and needs of other people's children. Their view, as a rule, is the limited one of paying as little as possible for an irreducible number of helpers, and, if to avoid offering higher wages they can employ school children, they may be trusted to do so. It may well be doubted, in the first place, whether in many parts of the country there is as yet any *bona fide* shortage of labour caused by the war. Recruiting was never very brisk in rural areas and the local tribunals are prepared, apparently,

to admit the claims of all sorts and conditions of young men who work on the land.

Adult Labour. IN considering, therefore, demands for the release of school children for labour on the land, Local Education Authorities would be well advised to obtain definite evidence as to the shortage. Secondly, if the shortage exists, the Authorities ought to be assured that all efforts to obtain adult labour have been made and failed. The various organizations now coming in operation to mobilize the labour of women, and the facilities afforded by the Army Council for the employment of soldiers, ought to be fully utilized by farmers before the education of the children is interrupted. When children are released it is suggested that only those who have reached the age of thirteen should be allowed to leave for suitable permanent employment, and only those who have reached the age of twelve, for suitable casual labour on the land, for a proportion of the school meetings, during the year.

Women Helpers. WITH reference to the employment of women in agriculture, one of the northern counties proposes to establish a Guild of War Agricultural Helpers. The object is to enlist and organize in different districts of the county those who are prepared to render War service by working on the land at farms where there is a deficiency of labour owing to the absence of men on military duty. In each area (which may be an urban or rural district, parish or group of parishes) there will be an officer, called the Warden, who will be responsible for the work of the Guild in the area. The Warden will register those who are willing to enlist as helpers, form small companies of helpers, and appoint stewards to lead them, assist in arranging for such preliminary training in manual operations as may be necessary. That is to say, with the co-operation of farmers in each locality, it is proposed that, before being employed in War service, all helpers will have opportunities of preliminary drill, according to the season, in the minor agricultural operations for which they have enlisted.

Reorganization of Teachers. THE thoughtful suggestions made in the *Teachers' World* on "a question that must be faced"—that is, the urgent problem of the supply of teachers—should receive the immediate and sympathetic consideration of the Board of Education. It must be obvious that the policy of teachers' organizations to have a certificated teacher for every class is impracticable. Moreover, it is contrary to the material interests of the teachers themselves. For instance, while in London one certificated teacher is employed for about 38 pupils, and of adult teachers, certificated and other, one for about 37 pupils, the county areas have one certificated teacher for about 58 pupils and an adult teacher for about 29. If in all the small schools certificated assistants only were to be employed, the expense, even at the present rates of remuneration, would be prohibitive, and in any case would tend to reduce rather than augment the salaries of these teachers. On the other hand, the unqualified supplementary teacher—although in some cases she may prove to be an excellent assistant for a small school—ought not to find a permanent place in our educational system.

Three Grades. THE suggestion is that for the purposes of elementary schools there should be three grades of teachers. The lowest, or third, grade would consist of any approved person not below sixteen years of age—presumably a pupil who has attended a secondary school for at least three years and who displays a special aptitude for teaching. The second grade, or associate, teachers would consist of those who have passed an approved examination of about matriculation standard and are not less than seventeen years of age. The first grade, or responsible, teachers would consist of those who have passed through an approved course of study and training, preferably of a University character, and have served with credit for at least one year. To this grade it is suggested second grade, or associate, teachers should be admitted in special cases where the Teachers' Registration Council recommends the promotion.

Useful Proposals. OTHER important proposals of considerable interest are that, while all headships of schools and specialist teaching should be reserved for first grade teachers, the man and woman occupying these positions should have followed a special line of study and not be required to teach every subject of the school curriculum; that instead of the present certificate examination an approved final examination should be conducted by the Universities to which the various training colleges might be affiliated. It is a reflection upon

our national sincerity that, while we seldom lose an opportunity of urging the importance of education and the great responsibility imposed upon its professors, we pay the majority of teachers less than the wages of a skilled workman. The grading of teachers would, it is anticipated, render possible much more satisfactory rates of remuneration for the first, or responsible, class. Moreover, it is suggested that the present inequality between Government grants and rate contributions should be adjusted by the Government refunding to Local Education Authorities the cost of teachers' salaries. The Government would then be free to determine the proportion of teachers of each grade to be employed by each authority.

THE Hon. Secretary of the County Accountants' Society (Mr. F. H. Owers) compiles each year a useful statement showing the educational expenditure in the large majority of administrative counties. It is to be regretted, perhaps, that the value of the return is to some extent decreased owing to the fact of certain counties not supplying the necessary information. The statement just issued shows that no return has been furnished by Hereford, Kent, Leicester, Rutland, and Surrey. In the forty-three remaining counties (excluding London) the average cost per scholar for maintenance for the year ended March 31, 1915, was £3. 17s. 4½d., the figures ranging from £3. 7s. 6d. in the Isle of Ely to £4. 13s. in Westmorland. The amount of rate raised per scholar was, on the average of all the counties, £1. 16s. 5½d., the Kesteven Division of Lincoln being lowest with £1. 4s., and the county of Bucks highest with £2. 10s. 10d. These figures, however, have only a limited relation to the amount of rate in the £1 required for elementary education. Durham, for instance, with a rate of 1s. 6d. in the £1, spends £3. 15s. 5d., and raises £2. 0s. 6½d. per scholar, while the rate in Berks is 1s.

THE loans outstanding in these counties for elementary-school buildings amounted to £8,176,364, and the largest debtors are West Riding of Yorks (£1,193,029) and Durham (£884,058). In both these counties there has been some anxiety to replace voluntary schools by schools provided by the Local Education Authority. The annual charge on the county for repayment of loans and interest is a heavy one, amounting to £41,995 in Durham and £47,582 in the West Riding, similar amounts being contributed by the parish, or parishes, served by the schools. In the majority of cases the County Council exercises the option of charging three-fourths of its expenditure in connexion with capital payments on the special areas concerned. Thus Lancaster, with a debt of £466,834, and Middlesex, with £420,383, have only £8,652 and £7,481 respectively to meet as an annual charge out of the county fund. Among the larger counties which are in the fortunate position of having a comparatively small school debt are Bedford (£65,921), Berks (£72,143), Cumberland (£77,286), Dorset (£37,580), Wilts (£42,716).

REGARDING actual expenditure on Higher Education, Mr. Owers's statement shows that the counties included in his return raised by rate £645,738, the amount of rate per pound varying from ¼d. in Dorset to 3d. in Durham. The total expenditure was £1,526,537, of which £528,919 was in respect of the maintenance of secondary schools. The outstanding loans amounted to £2,037,372. The counties where the Higher Education loans have already reached six figures are West Riding of Yorks, £292,916; Middlesex, £242,862; Cheshire, £167,305; Essex, £160,334, and Durham, £142,487; and, on the other hand, the debt in Dorset is only £2,250; Lancashire, £5,857; Lincoln (Kesteven) £8,929; Lincoln (Lindsay) £2,391; Norfolk, £8,383; and Westmorland, £1,428.

SCIENCE NOTES.

AN interesting and valuable piece of work has been carried on in the Manchester Museum which we hope will not be allowed to drop. Several schools having been taken over as military hospitals, the Education Authorities arranged a half-time system in certain of the remaining schools so as to accommodate the displaced children. In addition arrangements were made for eight classes to be held daily in the Museum, one teacher giving four lessons in biology and another an equal number in geology. And now the assistant in the Egyptian department gives short courses in Egyptology four times

per week. The lessons are of thirty to forty minutes' duration and are followed by examination of illustrative objects in the cases. Moreover, the Museum authorities have provided duplicate specimens from reserve stock which can be handled by teachers and pupils. In this way nearly a thousand children are receiving very valuable instruction. If the recommendations of the perfectly inexpert Committee on Retrenchment are followed, this excellent work will cease, and the children will be turned into the streets or more expensively and less efficiently housed and taught. We hope the Manchester authorities will pursue an independent course and continue their enlightened and successful procedure.

A NEW method of disinfecting hospital ships has been invented by Dr. Dakin. A current is passed through an electrolytic cell containing sea-water, and an effective solution of sodium hypochlorite is produced in five minutes, at a cost of 3d. per hundred gallons. For sterilizing decks, floors, &c., the solution can be diluted with an equal volume of ordinary sea-water. It is an easy laboratory exercise to imitate this method on a small scale, and at the present moment the fact that this electrolytic action is used on our ships conveying wounded troops across the Mediterranean gives it a special claim to attention in a school course, being stronger in appeal to pupils' interest than the manufacture of bleaching solution can be.

THE London Branch of the Mathematical Association had the pleasure of hearing a Presidential Address from Prof. T. P. Nunn on February 19, the subject chosen being "Reasoning." The standpoint of the lecturer was evolutionary, the power of reasoning being regarded as originating in such relatively low-level processes as are observable in dogs. These processes were, in turn, evolved from yet lower conative responses to stimuli which are usual in lower grades of life. The application of the principles to mathematical teaching were illustrated with special reference to geometry. Stress was laid on the need of concrete experience as material, without which the pupil could not be expected to reason—it was demanding bricks without supplying straw. Although schools no longer plunge boys into Euclid's Elements without some geometrical preparation, Prof. Nunn was of opinion that far too little geometrical experience, especially in three dimensions, was provided. More use should be made of models; it was a mistake to suppose that their use weakened the exercise of reason. Besides a ground-work of experience, it was necessary that the pupil should have a purpose to achieve—without purpose, reasoning could not exist. At the conclusion of the address, Prof. Whitehead strongly endorsed the views of the lecturer.

DR. J. W. EVANS has drawn up for H.M. Stationery Office a pamphlet (price 2d.), which, we believe, will be found useful by teachers and boys who have a taste for geology. Its title is *Directions for the Collection of Geological Specimens*, and the advice is detailed and thorough. It was probably written for the benefit of travellers, and contains advice on observing physiographical evidence as well as on collecting.

WE are sorry that we cannot support the suggestions of the London Mathematical Society as to the use of certain symbols and notation for printing. In our opinion teachers will be well advised to use the solidus notation sparingly. It is a fruitful source of error and confusion, and experience shows that it is an obstacle rather than a help to the printer. We particularly hope that examination papers will not follow the Society's recommendations.

THE Board of Education, under the authority of the Army Council, issued, on February 23, to Local Education Authorities, Schools, &c., the following statement:—"A teacher in a school or teaching institution aided by grants from the Board of Education who has been attested under Lord Derby's Scheme and has been 'grouped' in Army Reserve B, may, if an application for his postponement on grounds of public interest is made, with his concurrence, by the Local Education Authority or the governing body of the school or institution in which he is employed, be postponed for such time as may be determined by the Army Council." The Circular is accompanied by forms of application to be filled in and returned to the Secretary of the Board, who will submit this to the Army Council.

DORSET DEAR.

By S. P. B. MAIS.

IN the dark days from November to February we are usually entirely discontented with our lot. "London," we say repeatedly, over the teacups, "London is the only place in winter. Oh, to be in London, now December's here!" The splendid colours of autumn fade into the drab nakedness of Christmas: there is no beauty in Nature that we should desire her; there is no magic call in the air which makes us climb West Hill or High Stoy and drink in afresh the myriad variable features that have made our county world-famous. If the Pipes of Pan play at all, they play but one tune—"London—London—London."

When we go for a walk it is to the station to see the expresses dash through, Waterloo-wards: only after a heavy run across country with the Beagles does any of the old love of the soil return to us: we become irritable, morose. Why should the Londoner have all the privileges of life? Why should all those laughter-rousing revues with their narcotic powers of taking men's minds off the horrors of war be all at the beck and call of the people of one town? Why should not George Grossmith, Gerald du Maurier, Doris Keene, and Unity More make glad our hearts, too, by travelling up and down the country, bringing joy and light into remote places? Surely they could be spared for a month out of the twelve.

Why will not Messrs. Lyons supply us, county-folk of Dorset, with delicate viands and a band to play *Bric-a-Brac* and *To-night's the Night* the while, instead of confining their good work to one town? Why will not famous men in the world of art and letters, men whose very initials stir a feeling of profound reverence in us—say G.B.S. or E.V.L. or A.A.M., leave Adelphi Terrace and the haunts of Fleet Street and come and commune with us in the heart of that country which they profess to love so dearly? I suppose the truth of the matter is that in winter time, at least, man is a sociable animal: he wants companions, gaiety, warmth, and a sense of speed. None of these will he find in Dorset. A bicycle is almost indecorous here, unless it is being wheeled uphill. To walk at a rate of more than three miles an hour is to cause vague uneasiness in the hearts of the people you pass, who either tongue-tied turn to stare at you long after you are out of sight, or jeer at you as a fanatic.

The sense of hurry is so far remote from us that on these rare occasions when we do go to London, we have to stand still on the platform at Waterloo for some minutes to recover our sense of motion, so dazed are we by the rapidity with which people move and by the (to us) uncanny alertness of expression on their faces.

Here we take a library book (if we are wise) into the Post-Office: there is always time to light a pipe and read another chapter before the lady in waiting can condescend to recognize our existence. As a matter of fact, I have learned at last that the only way in which you can get served in any shop in Sherton Abbas is to open a book and settle down to read. This quite normal proceeding for some strange reason upsets their sense of equilibrium and proportion: they are often eager to attend to your wants (from sheer perversity, one is almost tempted to say) before you have had time to read even one page.

At any rate, it is never safe to go shopping without some kind of literature under your arm. As a matter of fact, shopping here has its compensations. When it is raining (in the absence of a British Museum, Queen's Hall, National Gallery, or Tube station) we just stroll in to our local bookseller's, pick up some book on the counter (it may be *Lenten prayers* or a handbook to geology) and settle down for a quiet hour's reading. No one will interrupt. As a change from this free refreshment of the mind it is possible also to obtain, if you are wary, free refreshment for the body.

The greengrocer or the pastrycook provides delectables of a simply irresistible nature; you absent-mindedly help yourself to chocolate after chocolate or plum after plum while you

continue to read, and it is astonishing how little you consume before your wants are attended to. But all these subterfuges take time to learn. It is not always easy for those who have led busy useful lives, say, of administrating large provinces five times the size of Great Britain to have to retire into private life in a country place where the main topics of conversation are the biting propensities of your neighbour's dog or the new hat of your neighbour's wife; where your most serious occupation is paying your gardener or looking after Belgian refugees; where it is impossible to get a book from the library within six months of publication, and then only if it be fiction; where you are entirely dependent upon your daily paper for your views of the situation and your knowledge of current topics of importance.

It is almost unendurable, if you are one of those who think that life is something to be lived to the full, every moment of it, to watch these cottage women standing hour after hour at their doors gossiping or merely gaping at the passers-by or to pass men prematurely bowed, who crawl through life, throwing precious minutes, days, weeks, months, even years to the winds, having no further object in view than the killing of time. They do quite literally kill it. Time, the most neglected, yet the most important of their gifts, they squander, even murder.

How it makes us long for that healthy spirit of competition which is the very zest of living in London, where each man strives to get the best out of himself in order to get out of the ruck and ascend one more rung of the ladder of fame. These countryfolk seem to have no initiative, no dissatisfied longings; there is no divine discontent, latent or otherwise, in their hearts. Even the better people are content to be cheated by their butchers or their milkmen; they are too lazy to demand good return for their money. The malign spirit of ease and lassitude has eaten them up so that they have no zeal left. Such are the thoughts that cross the minds of all of us who are not wholly dead to the inward spark that causes us to fret and fume when we feel that we, too, are likely to slip into the quagmire and to be lost for ever.

London is, then, our land of heart's desire: how we count the hours until release comes and we are able to throw ourselves for a day or a week blindly into the whirl of gaiety. Our friends in town look upon us as lunatics when we demand an early breakfast so that we may explore all the shops before lunch, to be followed by two theatres and supper at the Savoy: all we seem to see of their houses is between 2 and 8.30 in the morning. It is almost sinful for us to remain under an ordinary roof when we are in London: we want to be up and doing, wandering the streets, surveying the crowds every moment of the day. It is with the greatest reluctance that we leave the crowded street for the no less crowded restaurant or that, in its turn, for the theatre. There is so much to see and feel; the throbbing heart of London thrills us; the sight of the fog over the river is almost blinding in its beauty; we are dazzled by the vision of the numbers of delightful experiences that await us at every turn. Surely Parliament Hill or the Embankment on a sunny frosty morning, Piccadilly and St. James's Park when darkness is falling over the land, Big Ben reflected in the water, the cheery lights of a Tube station, all these and thousands of other phenomena excite our æsthetic sense so that we feel their beauty permeate our being through and through. It is with a strange feeling of being once more at home that we enter our club and recline again at ease in those luxurious chairs with all the periodicals at our command which we so sadly miss in Dorsetshire, and find friends there to talk to, men who have made their name in some niche of life which interests us extremely, men who talk with authority about the things that matter, not as village Shallows and Silences.

When we want music and light gaiety in London we don't have to endure songs and waltzes which were worn out already when we were children. When we want advice, spiritual or medical, we do not have to resort to sermons or textbooks green with age; we can sit at the feet of the Gamaliel or Ambrose Paré of the day. The best of every-

thing is accessible; we are as gods: into whatever shop we enter we are hailed almost as a divinity; our wants are known before ever we open our mouths; our idiosyncrasies are remembered alike by our tailor, our wine merchant, our tobacconist, our florist, and our bookseller: each has something which he knows exactly suits our taste, and we buy and go on buying.

There lies the secret of London's charms. To enjoy London a man must have money: as Doctor Johnson most truly said: "He who is tired of London is tired of life," but we quickly find that when the money gives out London becomes tired of us: she is a fickle, greedy jade. She preens herself out in her very best and incites us to partake of all her pleasures, but the piper has to be paid. After our week or month of revelry we look sadly at our depleted purses, and are staggered at the way that our scanty resources have disappeared: taxi fares, meals, books, clothes, theatres—all these seem to absorb money as dried up pots of plants drink water. We return sadly to Dorset, to obscurity and niggard penury; it is only there that we can live within our means without temptation.

For the first few days after we come back, our home, our furniture, our household gods all alike look tawdry, meagre, and commonplace—but we make up our minds to endure what cannot be cured, and in a few weeks we become reconciled to our lot. The evenings begin to draw out; we awake to the singing of a thousand birds, sunrise over the wooded hills is one vast mass of rosy colour, the plants begin to put forth their shoots, flowers to bloom in the garden. Spring is at hand. Mother Earth is awaking from her long winter sleep, and as she shakes herself preparatory to donning her gorgeous fresh apparel of green we feel that the Pan pipes no longer insidiously whistle, "London—London—London," but "Come out into the dewy meads, into the dark forest and learn my secret; London is all very well for a day, but I am your true love for ever."

Nature begins again to smile, to break into sunny-hearted laughter; all the woods and the hills seem to shake with the large-hearted mirth that possesses our great mother as she brings to birth her children of beauty, children calculated to make glad the heart of man, to cause him to forget "the pain, the truths and lies" that so worry the mind of man in these times of travail and dire distress. Spring is here: we forget and forgive the ignorant rudeness of the shop assistants, the sloth of the working men and women, the lack of aim or ambition on the part of all the young boys and girls; we forget momentarily that we have lost touch with Fleet Street, Adelphi Terrace, and Henrietta Street, or whatever part of London it is that so captivates our imagination, that we have cut ourselves off from the society we most covet of any in the world; the overpowering beauty of fields and streams, the eternal outpourings of joyous rapture on the part of all the birds captures our senses, and we are not so much content as overjoyed that our heritage is fallen unto us in a fair ground, in Dorset by the sea.

Now is the time for us to explore again all those haunts which we have so neglected since last summer—the old village churches with their Norman archways and dirty cobweb-ridden, rickety stairs leading to the belfry, from which we can spy out Camelot and Glastonbury, Lyme Regis hill and Egdon Heath. Now we can wander up that mill-stream in the Poyntington gully where the kingfisher used to display his gorgeous colours to the wary walker; now we can ride out to Montacute and Cattistock and revel again in the stern beauty of the Tudor manor houses and concoct fresh romances round their mullioned windows and flagged courts; now is the time to gallop again over the green track which Charles II used when he escaped from Trent to Charmouth, and imagine again that we hear the hoofs of the Parliament spies tracking him down, gradually drawing nearer and nearer. Now we can stand once more on Marston Hill and hear again the merry note of the horn as the master urges on his pack to take up the trail where he has located it: now even the passers by seem to be more awake and have something of the reflected glory of Nature in their

faces as they cheerily bid you "good-day." It is good now to be away from the turmoil and the stress of cities, to be free, wind-blown on the Dorset Downs, battling homeward against the gale at night with the stars twinkling humorously overhead as if positively interested in the good-natured battle between man and the elements which fight with him only to brace him the more and render him hardy, healthy, and active.

Let no one deride our Dorset now; this is life at first hand: we live what poets write—this is our compensation for the dark hours of winter. Let not the name of London be so much as mentioned. We have forgotten the garish day—we have our moors and fells: what more can man desire?

Enter these enchanted woods,
You who dare . . .
Earth your haven, Earth your helm,
You command a double realm;
Labouring here to pay your debt
Till your little sun be set;
Leaving her the future task:
Loving her too well to ask.

THE NEW OXFORD "LOCAL."

ONE of the suggestions made in Circular 849 was that the second school examination, that to be taken at eighteen years of age, should be "based on the view that the school course should in these two years (*i.e.* sixteen and a half to eighteen and a half or thereabouts) provide for the more concentrated study of a connected group of subjects," to which the study of one or more subsidiary subjects should be added. The new Oxford Examination, to be called the Higher School Certificate Examination, is an attempt to meet the suggestion. The groups are four—Classics with Ancient History, Modern Studies, Science, Mathematics—and there is a list of thirty subsidiary subjects, the last of which is Education. What strikes us about the requirements of the examination is their poverty, viewed as a syllabus for two years' work. We turn with special interest to the group called Modern Studies, for here there should be a program which could give definite shape and aim to the somewhat nebulous instruction of modern sides, which have developed in our English fashion, mostly at haphazard, without any well-thought out scheme, or clearly defined purpose. But what do we find? The group is divided into six sections, four being the languages Latin, French, German, Italian, and the other two History and English. Remembering that these studies, with some small subsidiary subject added—and all the subsidiary subjects are small—are to occupy the entire time of boys and girls of at least sixteen for two years, one would have thought that two languages, History, and English might well be required in the examination. As a matter of fact, a candidate can pass in two languages, and nothing more, except the aforesaid subsidiary subject, say, Raleigh's *Elementary Politics*.

Nor is very extensive reading required in the tongues to which candidates will give their whole energies for two years.

The French set books comprise a certain amount of poetry, two dramas, and two novels; the German, four plays, a fragment of history, and some poetry. This will spread out thin indeed when the students can read French and German for two hours or so a day. Unprepared translation and composition are added, but of what standard they will be, only the examination papers can tell us. Further, in each case, the "Literature and Social History" of the period of the set books is appended. This is, no doubt, a laudable recognition of the principle that literature should be read in conjunction with the history of the times, but the phrasing is enigmatic. What precisely is the "Social History" of

France from 1800 to 1850? Will it include the Socialistic movement of the thirties and forties? If so, would it not be desirable that the students should read some French books bearing on that movement? The predominance of imaginative literature in the program is a serious weakness. Between sixteen and eighteen the mental horizon is broadening, curiosity about the big world is increasing, the reasoning powers are gaining strength. It is a crime to feed the minds of young men and women at this age solely on plays and novels. Machiavelli's *Il Principe* and Schiller's *Abfall der Niederlande* are the only books which do not come under that denomination. But as an alternative to two languages, the candidate may take one language with two papers in History and two in English. He will then have to read a century or so of English History, a like amount of foreign history and some six or eight works of English writers, "a general knowledge" of which will be required. This seems to provide a sounder and broader education than the first alternative, though the ground to be covered is, to say the least of it, not excessive. We think the Delegacy might have ventured to throw elementary politics in with history. A boy who reads history at seventeen ought to be encouraged to deduce and generalize. A third alternative is History and English, with unprepared translation "of moderate difficulty" from a foreign language. The weakness of this choice is that the student's mind will never cross the Channel, except for a brief excursion into foreign history and an easy unseen. We can hardly say that Oxford has solved the problem of a modern liberal education. There is nothing of the nature of all-round humanistic culture in the various options admitted.

Of the last two groups we have not left ourselves much space to speak. The Board joined Mathematics and Science together as one group of subjects, but Oxford separates them. From sixteen to eighteen a boy or girl need study nothing but mathematics with, say, the history of Canada, or a fragment of Old Testament history thrown in as a subsidiary subject. This may be a good foundation for a University school of mathematics; will it be a good foundation for life? And it is surprising that no mathematics are included in the Science group, not even in connexion with Physics.

CORRESPONDENCE.

SHAKESPEARE AND THE ELEVEN-YEAR-OLDS.

To the Editor of "The Journal of Education."

SIR,—I think that I am justified in saying that it is still something of an experiment to read the plays of Shakespeare with a class, the average age of which is between eleven and twelve years; so that the following few notes as to what I have found out by actual experience may prove of interest. The selection of the play is of the highest importance. And here it is easy to be led astray by preconceptions. It is a mistake to think that, for instance, *As You Like It* will appeal to these youngsters because of its woodland scenes. Shakespeare's comedies require more knowledge of life for their even partial appreciation, and these young children will, if allowed to be frank, own that the play between Rosalind and Orlando is boring to them.

In my experience, there is no play more successful with the younger children than *Richard III.* I will risk being told that this play is but a "melodrama of genius," for I am writing here, not of my own personal tastes and preferences, but of what I have proved, more than once, to be the taste and preference of the class. The character of Richard is drawn with such fascinating boldness; the Satanic craft with which he plays with all the other persons, his swiftness, subtlety, and unflinching resource, dazzle and delight the children. They realize, of course, that he must be defeated in

the end; they have a sure sense of primitive justice, and he is clearly the enemy of God and man; but here the strength of the ghost scene comes in. And how they love the ghost scene! No true child believes that Richmond in himself is strong enough to put down the supremely crafty Richard; supernatural agencies intervene, and the tyrant falls, not the least regretted by the class that has followed his grim exploits with a series of thrills.

Henry V is another excellent play for children of this age, with the added advantage that it is often possible for the children to see this on the actual stage, a great revelation always. The humour in *Richard III* is of the grimest; that in *Henry V* is positively rollicking. I remember with great delight the glad surprise of my class when they discovered that Shakespeare, that mighty name to which was attached a kind of awe, could positively be "funny"! The celebrated flea on Bardolph's nose effected a lively introduction to a quite human Shakespeare. The place of contrast in art came up naturally for discussion.

Here let me breathe a word of warning against dragging into these lessons any disquisition which does not enter naturally. So long as the child is enjoying Shakespeare, the master's most useful task is to efface himself. There will come appropriate times—at the end of the reading, probably—when much may be usefully discussed; and the more freely the child says his say, the more useful, probably, will be the discussion. The dragging in of the notes for the notes' sake, which I should not advise at any age, is certainly to be avoided with a young class.

Julius Caesar and *The Merchant of Venice* are two plays which I find successful with children of this age. The characterization in both these plays fascinates young and old. From a child of eleven I got the following truly illuminating commentary:—"What a respect Shylock shows for the Law and for the Law Court!" As thoughtful as unexpected, and worth some pondering upon. "What ideas of Venice do you gain from the play?" This was an essay which I set the class, and it brought a series of very thoughtful and intelligent observations. Then, again, *Julius Caesar* provides five highly dramatic episodes, all masterly drawn, yet each providing much that a child of eleven can value and enjoy—the conspiracy, the murder, the Forum, the quarrel, the final battle.

The greatest difficulty in the matter, in my opinion, is to find in a class of this age of average British children a sufficient number whose power of reading dramatically is equal to the occasion. Here, in a co-education school, I think we get a little advantage from the fact that girls are less self-conscious than boys. The children themselves soon become very keen, and know the best readers, and are very critical of the inferior ones. The matter is often discussed (so keen are they) in the interval between lessons. I have entered my classroom to be greeted with: "Please will you be Shylock, as none of the good ones want to be, and the bad ones mustn't be?"

The competition for certain parts is sometimes embarrassing. In the Clarence scenes, in *Richard III*, I took it for granted that the boys must be first and second murderer, to the marked grief of the girls. What is a poor mere man to do when a particularly sweet little girl, with an intensely pleading look in her large expressive eyes, entreats earnestly: "O, Mr. Platt, do let me be first murderer to-day!" —Yours, &c.,

WILLIAM PLATT.

WILLIAM RICE, 3 Ludgate Broadway, E.C.

living in English public schools. The following schools, among others, belonging to this influential body were represented at the First Guildhall School Conference, 1912, not a few by their head masters or medical officers: Abingdon, Bromsgrove, Canterbury (King's School), Christ's Hospital, Clifton, Dover, Eastbourne, Eton, Glenalmond, Haileybury, Harrow, Lancing, Malvern, Marlborough, Mill Hill, Radley, Rugby, Sedbergh, and Sherborne. The Master of Haileybury also sat on the special Committee which organized it, as nominee of the Head Masters' Conference, while, among his colleagues were representatives of the Incorporated Association of Head Masters, the Association of Head Mistresses, the Private Schools Association, the Medical Officers of Schools Association, the British Medical Association, and other societies, as well as Drs. Clement Dukes and Odery Symes, of Rugby and Clifton respectively, and the editors of your and other journals. May I be allowed to remind your readers that in discussing the principal conclusions arrived at on this occasion, the *Lancet* used these words: "What is wrong is the business management of the catering department—in a word, the housekeeping." Until women specially trained on the lines advocated by our Joint Matrons and Schools Committee are available in this country, as they have long been in America and more recently in Canada, the task of catering at once scientifically and economically in schools and other institutions must at best be a difficult one. Paradoxical though it may at first sight appear, it has been demonstrated that increased variety of food—held at the Guildhall to be one of the desiderata—so far from involving increased expense, can be provided at a lower cost than a monotonous and unappetizing diet. This takes no account of the reduced amount of waste, or the improved physical and mental conditions alike of scholars and staff that result. We have already been able to be of some service to a number of schools and, I shall be glad to hear from, or to see by appointment, any Head of school or house, or responsible caterer, who stands in need of help.—Yours, &c.,

CHAS. E. HECHT.

UNIVERSITY OF EDINBURGH.

Chancellor: The Right Hon. A. J. BALFOUR, M.P., D.C.L., LL.D., &c.

Rector: Field-Marshal the Right Hon. EARL KITCHENER OF KHARTOUM, K.P., O.M., G.C.B., G.C.S.I., G.C.M.G., G.C.I.E., LL.D.

Principal and Vice-Chancellor: (Vacant).

Secretary of Senatus: Professor Sir LUDOVIC J. GRANT, Bart., B.A., LL.D.

The **Summer Session**, except in Law, extends from about the middle of April to the end of June.

The **Winter Session** begins about the beginning of October and closes about the middle of March.

The University embraces **Six Faculties**, viz.: **Arts, Science, Divinity, Law, Medicine and Surgery, and Music**, in all of which full instruction is given and Degrees are conferred. There are many different avenues to the **Arts Degrees**, the graduation subjects embracing English, History, Modern Languages, Science, &c., besides Ancient Languages, Philosophy, Mathematics, &c. The wide scope of the Arts Curriculum permits of the Combination of Arts, Science, Medical or Special Studies, and it has been shown by successes of Edinburgh students in the Civil Service Examinations that it is possible to combine study for Degrees in Arts, Science, or Law with preparation for this and other Special Examinations. In addition to the Ordinary and Honours Degrees in Arts, the Higher Degrees of D.Litt., D.Phil., and D.Sc. are conferred. A **Diploma in Education** is conferred upon duly qualified candidates. Education in Military subjects is given in connexion with the Scheme of Allotment of Army Commissions to Graduates of the University. Degrees in B.Sc. and D.Sc. may be taken in **Pure Science, Engineering, Public Health, and Veterinary Science**; and the Degree of B.Sc. in **Agriculture and Forestry**. There are fully equipped Science Laboratories, and other necessary appliances, in all these Departments. The curriculum in **Divinity** affords a thorough training in Theological subjects, and the Degree of Bachelor of Divinity (B.D.) is conferred. The **Law** Faculty, besides furnishing the professional equipment necessary for those intending to practise in Scotland, contains Chairs in Jurisprudence and Public International Law, Constitutional Law and Constitutional History, Roman Law, and Political Economy, as also Lectureships in other important branches of the Law, and is thus adapted for students preparing for the Civil Service Examinations, and for legal, political, and administrative appointments generally. The Degrees of Bachelor of Laws (LL.B.) and Bachelor of Law (B.L.) are conferred. The Faculty of **Medicine** has a full curriculum in Medicine and Surgery, and is equipped with very extensive Laboratories and all other necessary appliances for Practical Teaching. Ample facilities are afforded for Clinical Instruction at the Royal Infirmary, Maternity Hospital, Royal Hospital for Sick Children, Hospital for Infectious Diseases, and Royal Asylum for the Insane. Four Degrees in Medicine and Surgery are conferred by the University, viz.: Bachelor of Medicine (M.B.), Bachelor of Surgery (Ch.B.), Doctor of Medicine (M.D.), and Master of Surgery (Ch.M.); and these Degrees qualify for practice throughout His Majesty's dominions, and for admission to the Naval, Military, and other Public Medical Services in the United Kingdom. A **Diploma in Tropical Medicine and Hygiene** (D.T.M. & H.) is conferred on Graduates in Medicine of the University, and specially approved Medical Practitioners who have resided abroad. There is also a **Diploma in Psychiatry** (Dipl. Psych.). A University **Certificate in Tropical Diseases** is conferred on qualified Medical Practitioners who have attended Courses in the University on practical Bacteriology and Tropical Diseases. In **Music** there is a full course of study for graduation, and the Degrees of Mus.B. and Mus.D. are conferred.

The University Staff consists of 43 Professors, over 90 Lecturers, and about 60 Assistants and Demonstrators. The annual amount available for Fellowships, Scholarships, Bursaries, Prizes, &c., is about £20,265. Facilities are afforded for research in scientific and other subjects.

Women may attend the Classes in Arts, Science, Divinity, Law, and Music, and they are admitted to graduation in Arts, Science, Law, Medicine, and Music, the training for Degrees in Medicine being afforded by well equipped extra-academical Schools.

Information regarding Matriculation, the Curricula of Study for Degrees, &c., the Examinations for Fellowships, Scholarships, &c., may be obtained from the **DEANS OF THE FACULTIES**, or from the **CLERK OF SENATUS**; and full details are given in the University Calendar, published by Mr. JAMES THIN, 55 South Bridge, Edinburgh—price 3s. 5d. by post. The Preliminary and Degree Examination papers in each of the Faculties are also published by Mr. JAMES THIN, viz.: Arts and Science Preliminary papers and Bursary papers, 1s.; Medical Preliminary papers, 6d.; Degree papers: Arts, 1s.; Science, 9d.; Divinity, Law, Medicine, and Music, 6d. each. 1915.

By order of the Senatus,

L. J. GRANT, *Secretary of Senatus.*

These School and Teachers' Advertisements are continued from page 129.

BEDFORD PHYSICAL TRAINING COLLEGE.

LING'S SWEDISH SYSTEM.

Principal: Miss STANSFELD
(President of the Ling Association of Gymnastic Teachers).

The object of the College is to train Students to enable them to become Teachers of Gymnastics and Games in Schools.

The Course of Training extends over two years, and includes the Theory and Practice of Gymnastics on the Swedish System, Massage and Medical Gymnastics, Anatomy, Physiology and Hygiene, Dancing, Lacrosse, Lawn-tennis, Hockey, and Cricket.

An educational centre like Bedford affords special facilities for practice in Teaching and professional coaching in Games. Swimming and Boating in the summer.

For Prospectus apply—**SECRETARY, 37 Lansdowne Road, Bedford.**

PORTLAND ROAD GYMNASIUM, London, W.—Students thoroughly trained for Public Examinations. Duration of Course, 2 to 3 years. All branches of Physical Work. English and Swedish Gymnastics, Hygienic Exercises, Dancing, and Remedial Work.—Miss TOLLEMACHER, Member and Examiner of the British College of Physical Education, M.G.T.I., 113 Mount Street, Grosvenor Square, W.

ADVERTISEMENT and other

matter for APRIL issue should reach the office by **March 25th**. Urgent Notices of Posts Vacant and Wanted can be received up to **March 27th** (first post).

THE INCORPORATED BRITISH COLLEGE OF PHYSICAL EDUCATION.

5 & 7 Johnson Street, Notting Hill Gate, London, W. (Founded 1891.)

EXAMINATION for MEMBERSHIP (including the Theory and Practice of British and Swedish Educational Gymnastics), **LICENTIATESHIP**, and for the **SCHOOL TEACHERS' DRILL CERTIFICATE** are held thrice annually—in February, June, and November respectively but additional (Local) Examinations for School Teachers are held under certain conditions. Full particulars to be obtained on application.

Education Committees, Schools, Colleges, and others requiring qualified INSTRUCTORS of either sex should communicate with

FRANK H. GELLING, Hon. Secretary.

THE FUNDIMENTS OF MUSIC, HARMONY, &c.

Special Correspondence Courses.

101 Correspondence Pupils have been successful in the Paper Work of the L.R.A.M. and A.R.C.M. Examinations.

Mr. E. H. BIBBY (Mus. Bac., L.R.A.M., A.R.C.M.), c/o Forsyth Bros., Deansgate, Manchester.

ELOCUTION.—

Miss GERTRUDE TOOGOOD.
RECITING, READING,
PUBLIC and PRIVATE SPEAKING.
BREATHING EXERCISES (chest expansion and carriage).
STAMMERING and ALL SPEECH DEFECTS.
DICTION and SONG INTERPRETATION for Singers.
Professional Pupils fully prepared for Recitals and Teaching.
Schools visited, Bradford, York, and Harrogate visited weekly.
Terms, **STUDIO, 6 SOUTH PARADE, LEEDS.**

Sea and Mountain Air.

THE CALDER GIRLS' SCHOOL, Seascale, Cumberland.

Unique situation on the North-West coast, where the climate is bracing, sunny, dry, and temperate.

Separate Houses for Senior and Junior Pupils.

The aim of the School is to supply a thorough education at a moderate cost, and to ensure that all the girls' occupations, both work and play, shall tend to the building up of character and the formation of good habits.

A third house, conducted on College lines, is set apart for older girls who wish to specialize in History, Literature, Modern Languages, Music, Drawing, or Domestic Science.

Pupils are encouraged to enter for the Cambridge Higher Local Examination.

Illustrated Prospectus on application to the Head Mistress.

WANTED.—"Child Life," "Child Study," "Child Monthly," "The Child," parcels of odd numbers; also "The Journal of Education" Volume for 1885, complete in Publisher's Binding, by JOHN DAVIS, 13 Paternoster Row, London.

X Transfers and Partnerships are on pages 130, 161, and 162; other School and Teachers' Advertisements are continued on pages 161, 162, 163, 164, 165, 166, and 167. **X**

THE Education Committee of the L.C.C. raised some questions at a recent meeting regarding the appointment of a charwoman who had taken a three months' training and become an infant teacher under the recent scheme. "Home, sweet home" is a sacred spot, and it is the duty of man to insist on the fact that our wives, mothers, sisters, daughters, are ennobled by honourable work in it and for it. Why should not the charwoman share in this ennoblement? It is labour quite as useful and honourable as that in workrooms, factories, A.B.C. and other shops. Nevertheless, one feels a little difficulty in cordially endorsing the recommendation of the Chairman of Committee, who is reported as "delighted that the Council could afford such a woman opportunity to better herself."

WE regret to learn that Miss Mowbray, who has for over thirty years held the Head Mistress-ship of the Winchester School for Girls, is retiring at the end of the term. The Council has passed a unanimous resolution expressing their admiration of all that she has done for the school, which is practically her creation. "Her rare talent for organization, her sustained enthusiasm and devotion have been the chief causes of the high reputation which the school now enjoys."

ROLL OF HONOUR.—L. D. Cane, Captain and Adjutant, 20th Royal Fusiliers, was killed in action in France on January 24. He was a scholar of Sidney Sussex College, and took a First in the Classical Tripos of 1904. After some years of experience as an assistant master, he was appointed to an Inspectorship of Schools. On the outbreak of war he was granted leave of absence, was gazetted to the 20th Royal Fusiliers, and was sent to the front last November. His widow is a daughter of Mr. S. Haslam, the well known Uppingham master.—Lieutenant E. S. Wilkinson, 1st London Regiment (Royal Fusiliers), and Royal Flying Corps, son of Prof. Spenser Wilkinson, has been killed in action; also Private H. Rieu, 16th Battalion Middlesex Regiment, assistant master at Merchant Taylors School, the fourth member of the staff who has given his life for his country.—Lieutenant S. S. Anderson, 5th Battalion Royal Scots Fusiliers, Assistant Master at Ayr Academy, has also fallen.

The Williamson Expedition SUBMARINE MOTION PICTURES

THE FIRST AND ONLY MOTION PICTURES TAKEN UNDER THE OCEAN.

The journey of the Williamson Expedition along the bottom of the Atlantic Ocean, 100 miles from Nassau to San Salvador, recorded in the most wonderful Motion Pictures and told in an absorbing Lecture by

Mr. J. BEST, B.Sc. Lond.

THIS amazing film shows the wonderful beauties of the ocean bed as never before conceived; beautiful coral formations, marine gardens, sponge fishing, deep-sea diver exploring sunken wreck, astonishing fishes, and hair-raising fights between men and sharks.

Education Authorities endorse it as one of the most valuable and instructive lessons ever presented to the young people of this country. These Motion Pictures will be shown in most Cities. A post card will bring you particulars.

Address—Manager, Williamson Submarine Motion Pictures, Philharmonic Hall, London, W.

REGENT HOUSE, KINGSWAY
In the Heart of London.

IN LONDON

EDWARD J. BURROW & CO., Ltd.,
Educational Consultants,

beg to announce that for the greater convenience of their clients, they have now established their new Educational Agency at
REGENT HOUSE, KINGSWAY.

Clients are cordially invited to communicate their requirements as to Pupils to Regent House, where they will receive courteous attention, and Principals having vacancies are advised to send six copies of their Prospectus to Regent House for the immediate use of parents.

There is no fee for registration of those Schools accepted for recommendation.

We do Three Things Well:

**PRINTING SCHOOL PROSPECTUSES,
PRINTING SCHOOL PERIODICALS,
PLACING NEW PUPILS.**

MR. ED. J. BURROW gathered valuable information in producing his set of 500 etchings of the greater Public Schools, and his work in founding a business devoted to Scholastic Printing, in assembling a staff of skilled craftsmen, who, from modest beginnings, have achieved recognition as the most skilful producers of School Prospectuses and Magazines in this country, is now history.

Retaining our staff at the Parent Publishing House in the heart of Cheltenham—The Garden Town and Educational Centre—we now command the advantages of a counterpart in the heart of London, under the direction of a gentleman with over ten years' successful experience of Educational Agency Work.

Having daily intercourse with parents seeking Schools, we command exceptional opportunities of knowing exactly the features in a prospectus which appeal to parents, and this knowledge is reflected in the printing we produce for our clients.

A few lines of enquiry, together with a copy of your present Prospectus, Photographs and any details which you consider may with advantage be included in your new Prospectus, will enable us to send interesting suggestions, specimens, estimates and much valuable information. We make no charge for this, so that nothing can be lost, although much may be gained, by taking advantage of our offer.

Enquiries as to Printing School Prospectuses and Magazines should be directed to

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C.

SHAKESPEARE IN THE CLASSROOM.

By A MODERN SIDE MASTER.

I SOMETIMES think that the Shakespeare Tercentenary Committee would do more for the honour of Shakespeare and the respect of his memory by offering a prize for the perfect school edition of one or more of his plays, than by the erection of a thousand theatres. It is a sad confession to have to make, and yet I fear it is true, that the effect of school editions, coupled with the prospect of school examinations in Shakespeare, is that there is for me a slight taint about the plays which I have read in school with a form. Now it is possible, of course, that the prize-winning edition might be a perfectly plain text of the plays, well printed on good paper; and for some purposes this would deservedly obtain the prize. But the edition which I contemplate is one which assumes the present examination system. It is adapted, not for a Perse play company, but for a classroom where an impending certificate or matriculation examination utters an occasional warning like the ghost of Hamlet's father from beneath the boards. There is a story current in a famous school, that the head master, hearing a "confused noise within" as he passed the door of a junior master's classroom, entered, and, seeing a small boy crouching beneath one of the desks, demanded sternly what his name was. "First murderer, sir," was the reply. Of course, this is all very well in its way, and for the evocation of the dramatic instinct even a typewritten part with "cues" provided may be sufficient. But the head master and the examiner call for sterner stuff.

Now it is perfectly true that one way is to give boys a plain text and perhaps a notebook, mug up "Verity" in the holidays, and give a sufficient *réchauffé* to the form. But this procedure is vitiated by the following dilemma: The detailed explanations and the note-taking will probably interfere seriously with the reading of the text, or, if they

are deferred till afterwards, the text will have been read by boys who are ignorant of what a good many of the words and expressions mean. There must then be an annotated text, which boys can read beforehand, so as to come in with an understanding of the minor matters which have to be mastered before we can profitably approach the real problems of the drama. Preferably, I think these explanations should be given as foot-notes on the page. For one thing, it would limit them in scope. No one could print one line of text and occupy the rest of the page with notes, after the fashion of the older classical editions. It would look too foolish. Sometimes when an unfamiliar word makes its meaning plain, either by its own peculiar expressiveness or by its context, it can be left without explanation. "Aroint thee, witch!" hardly requires a note. Similarly, if the meaning of a phrase, slightly obscured by an inversion of words, for instance, can be made out by inspection and common sense, it is better to leave it for teacher and class to unravel together. Even if sometimes they fail, that is perhaps preferable to telling them in a ready-made paraphrase. The worst of "notes" is that they almost always tell you the things better left to be found out, and omit the things that really want telling. Any unusual words with a peculiarly interesting etymology may have a glossary at the end assigned to them, which we may, or may not, use by way of a concession to philology. But the tiresome system of "notes at the end" is a device which has nothing to recommend it but the method of "learning and saying," possibly accompanied in the "saying" by much tramping about to "take places." In no more rational system has it anything to recommend it. It is easy enough to discover if a boy has spent any time over it beforehand without that clumsy and disturbing process.

But the more important matter is that of the larger problems and difficulties which are concerned not with verbal obscurities, but with the meaning of the play as a whole. And here I am arrested by a doubt. To state that there is a problem as to the meaning of the play is surely to accuse Shakespeare of incompetence. A contemporary dramatist would hardly take it as a compliment if all the critics differed as to what his play meant. In some respects I think there is no answer to this objection. To have to tell the readers of *Macbeth* (I take my illustrations mainly from this play because I have recently "done" it for an examination) that it is a tragedy of Ambition is really an insult to the intelligence either of the author or the reader. Nor is it much better to have to explain that Lady *Macbeth's* ambition is of a kind different from her husband's. If the barest reading of the play does not make these things plain, then it is better left alone. Nor, I think, is it always necessary to realize these things analytically. A good dramatic presentation of the sleep-walking scene does not make us ask: "What change has taken place in Lady *Macbeth* since we last saw her?" We realize it without explicit analysis. The real place for discussions as to the meaning of a play is where the acting would make things plain which cannot be fully expressed in the written text, and especially where the poet has purposely left some scope for the actor's interpretation. A case in point is, I think, the development that takes place in *Banquo*. Mr. Bradley has worked this out admirably, but it might easily escape even a careful reader except in the one plain intimation about

the cursed thoughts that Nature
Gives way to in repose.

In fact, if we are to have "introductions," they should be modelled on Mr. Bradley's essays, though, of course, greatly reduced in length and scope. I do not think that the date of the play matters, except for actual specialists, unless just so far as to assign it to one of the great groups according to strictly internal evidence of style and metre; and for this purpose probably a separate handbook on Shakespeare, such as Prof. Dowden's, is a better guide. Holinshed and Plutarch are only interesting as showing how much a dramatist can borrow, and yet be strictly original. Otherwise, for our purpose, they are better forgotten.

Moreover, these remarks are not based wholly on personal predilection, but on the requirements of examiners. The Oxford and Cambridge Higher Certificate, which is meant for boys of eighteen, seems to require a knowledge and understanding of the play which could be obtained from a school edition such as I contemplate, supplemented by discussion in class led by persons who are not necessarily Shakespearean scholars. Possibly such an edition already exists. If so, it is lost in the infinite variety of specimens which flood our common-room library. Mr. Verity, at the present moment, seems chiefly to hold the field; but, with due respect for Mr. Verity's editions, regarded as manuals for the use of University students, I feel impelled to make war on his conception of the need of schools, just as Canon Glazebrook, in a noteworthy essay, made war on the conception of "Clark and Wright" some years ago. The truth is that many "school editions" are really written more for the benefit of the teacher than the taught. If it were not so, where would be the use of the teacher? It does not require a University degree merely to "see that the boy has read it."

Finally, I must confess to a doubt whether even the prize-winning edition would quite rid me of that feeling of a taint. Possibly to get boys to appreciate Shakespeare and, at the same time, to make him an instrument of examination, are incompatible things. The inventors of the Oxford and Cambridge "Schools Certificate" refused to make examination in English literature compulsory, because they thought that to examine in it was to kill it. The popular symbol of education is still the rod. Perhaps it is unwise to make Shakespeare into such an instrument.

BILINGUAL CANADA.

IT is unfortunate that, at a time when the French and the British are more closely united in spirit than at any previous period in their histories, a misunderstanding should manifest itself in the great Dominion in which French and English have their common home. The French have a serious grievance against the adjoining Province of Ontario on the schools question. The grievance is that the English-speaking portion of Canada will not allow that Canada, as a whole, has a right to call itself bilingual in the same sense that South Africa claims the privilege for herself, or as Switzerland claims it for her three tongues. The French Canadians insist that, wherever they go in Canada, they are entitled to claim that French shall be used as the medium of instruction in the schools, provided that the majority of the children come from French homes. Ontario retorts that this is a mistaken view. Quebec, says the Ontarians, is a bilingual province, but not Ontario. "Here," they affirm, "you are foreigners. You have no more legal right to be instructed in French than the Russians or Icelanders (who also resort as settlers to our province) have to be instructed in their native languages." The argument may or may not be correct, but policy would seem to lie the other way. Many of the better educated English-speaking Canadians maintain that the French language in Canada lives on grievances. Were these removed, the superior commercial value of English would probably promote its predominance. They also maintain that the whole trouble is fundamentally non-political, but ecclesiastical, and, like many other feelings, good and bad in this world, is fostered by the priests. The French Canadian paper *La Presse* contains the account of a monster meeting held in Montreal to hear a speech from Senator Landry, President of the Association canadienne-française d'Éducation de l'Ontario, on the subject of the wrongs suffered by the *habitants* of Canada. On this occasion the beauty of the French as spoken in Canada was insisted on, and it was maintained that it had a historic interest not inferior to that of the French of Paris. A singularly inept utterance of an Ontario orator was cited by a notary called Victor Morin, in which the orator maintained that the French

Canadians had better stop talking French and boasting of their large families (*sic!*), and that they ought to assume English names. Those parents who had more than five children ought to have all above that number drowned! It is certain that ill judged and fatuous utterances like this are not calculated to allay the racial feeling which the French Canadians assert is beginning to make itself very forcibly felt. It would be an excellent thing for the future unity of Canada if the English- and French-speaking inhabitants of that fine country would learn each other's language. And it would do much good if the professors at the important M'Gill College were so well equipped with French as to be able to give lectures in that language, not merely in their own college, but throughout French Canada. This, hitherto, has been far too much neglected.

JOTTINGS.

THE Easter Meeting organized by the Committee for Development of Regional Survey (Chairman, Prof. Patrick Geddes) will be held at Ludlow, April 22 to 29, and a practical study will be made of this interesting town and its region from as many standpoints as possible. The results of these studies will be correlated to form what is hoped may be the beginning of a regional survey of Ludlow. The governors of the Grammar School have kindly consented to the use of a room for evening gatherings. The various sections of the meeting, under capable leadership, will study along their own lines—geographical, historical, sociological, &c.—and the result will be correlated and discussed at the evening meetings. No formal classes and few lectures will be held, but addresses will be given by members of the Committee and others. A small fee, calculated to cover the expense of organization, will be charged to each member of the meeting. Members will be asked to find their own accommodation in the town, but a list of hotels, lodgings, &c., will be sent to inquirers. Further particulars may be obtained from the Secretaries of the Meeting—Geo. Morris, 18 West Road, Saffron Walden, and Miss M. Barker, The Outlook Tower, Edinburgh.

ROMAIN ROLLAND's new book, *Au-dessus de la Mêlée*, which has run through many editions in France, has been translated into English, and is to be published very shortly, under the title of *Above the Battle*, by Messrs. George Allen & Unwin. The translator is Mr. C. K. Ogden, M.A., of Cambridge.

THE Women's Local Government Society have presented a Memorial to the President of the Local Government Board urging it to exert pressure on Local Authorities to secure the co-operation of women on Committees for the Care of Women and Young Children. It is pointed out that the need for introducing such reform is pressing, as on most of the Councils all the members are men, and during the operation of the Elections and Registration Act no women can be added by popular election.

LORD HARDINGE laid the foundation stone of the new Hindu University at Benares on February 3.

It is satisfactory to record that during the first year of the War there has been no diminution in the numbers of students preparing at the Maria Grey College for teaching. The College admits only a limited number of students and every vacancy was filled. But the demand for trained teachers is in excess of the supply. Every one of the students taking a Secondary Diploma in June and December of last year has obtained a post. Of the seventeen students who presented themselves for the examination in proficiency in teaching during 1915, all were successful.

DURING the past year fifteen students of Cherwell Hall Secondary Training College for Women Teachers passed the examination for the Oxford Diploma in Education, ten students obtained the Cambridge Teachers' Certificate, and ten students qualified as junior form mistresses by taking the Cherwell Hall Teachers' Certificate. Several students were appointed to exceptionally good posts, some in boys' schools, the salaries obtained by the majority being higher, on the whole, than before the War.

PROF. MURRAY starts to-day for the Government business in Sweden as he announced when accepting the Presidency of the Teachers' Guild.

OBITUARY.

F. E. THOMPSON.

(Late Assistant Master at Marlborough College.)

F. E. THOMPSON, who has just passed away, was one of a group of "famous men" who took up the work of the pioneers, the first makers of Victorian Marlborough, and shaped and moulded the traditions which are the rich inheritance of the present generation. "Let us praise famous men," though their fame rest with the sons of a single school. They were all missionaries in the high sense, men conscious of great possibilities, men of creative energy and high ideals, not one of whom but had his touch of genius, men who might have sought wider spheres and higher positions, but preferred to give their whole lives and the eager workings of their active brains to this one school which they knew and loved and served faithfully. They had indeed unique opportunities. Thompson, for his part, had his great special opportunity and he took it. As first master and maker of Cotton House, he counts directly as one of the creators of Marlborough as it stands to-day. He had taken one of the College houses (B 2) in the usual course of promotion, and held it until his marriage; he also taught several forms, beginning in the fourths. But it will be as master of Cotton House and as master for many years of the Upper Fifth Form that he will be most remembered, and it is of his conduct of these posts that a few words may be said now, in the first hours of loss.

For more than twenty years Cotton House meant Thompson, and Thompson stood for the School as represented in Cotton House. He made it a unit of the school while he gave it the impress of a definite character of its own. His own house instincts and house loyalty were naturally strong, nor did he ever minimize the influence which a strong house-master can exercise upon a school through his house. Inevitably and rightly, Cotton House interests were his special care and his pride. But he did not lose sight of the whole in the part. He recognized, and taught, that the school came first, while he tried so to mould the traditions of the house that loyalty to it was loyalty to the school. So he made the house, so far as a man can shape his ideals, a type of what he thought the school should be, and through the house he helped to mould the school. And the influence he gained by virtue of strong views and a strong will was very wide and felt by all. It was felt in the boys' work and all sides of their intellectual life; it was felt in their games, in the value of which he believed strongly, where, of course, he enlisted the sympathies of the boys themselves. In both of these, as indeed in every sphere of their activities, his spirit was present as a moral force. He stimulated boys' natural ambitions; he fostered or tried to develop ambitions that needed drawing out. Under him every Cotton House boy was made to feel that there was something he could do for the credit of the house, which meant the credit of the school. So Cotton House acquired a strongly marked corporate feeling and took its full share in the larger corporate life of the school. This corporate feeling was at once widened and tightened by the close personal touch Thompson kept with the old members of his house, his friendship and influence extending to their later lives, and by his liberal hospitality to them.

But it was not to his house that his influence was confined. A measure of the esteem in which he was held by all with whom he had any contact may be taken by this; no man during the years of his retirement had a wider circle of Marlburian friends or a more intimate personal knowledge of the doings of Marlburians all over the world. It was natural, on this account, that he should be asked to undertake the revision and fresh compilation of the Register; equally natural, from the character of the man, that he should thenceforth devote the labour of hours every day to

it. In those later years, his society was eagerly sought. Wherever he was, there Marlburians gathered, as to a natural centre; there they found an honoured friend, a "link among the days."

In the chair of the Upper Fifth classroom he sat—to use a phrase of his own—"like a little king upon his throne," for many happy years, teaching, helping, sympathizing, inspiring. His individuality as a teacher was certain of its effect, because he was unsparing in effort, thorough in discipline, and had that touch of originality which attracted and stimulated the cleverer boys. His handwriting and his reading were typical of the man, the first singularly clear and singularly beautiful, the second a manner of delivery so original that it arrested the attention and compelled thought. He had the rare gift of putting new meaning into well known phrases. The sonorous emphasis with which he would read a lesson from the Bible in Chapel, or a passage from a favourite author in classroom or lecture room, had a charm like the setting of familiar words to new music; it was not dramatic reading in the ordinary sense, but an interpretation, charged with feeling. He loved exactness of scholarship; his Greek Grammars are now everywhere in common use; he took pleasure in formal criticism. But, for all that, he was no formalist. He loved literature, and taught it in its large, human, and vital aspects. He was a diligent student of history. In his ordinary form work he aimed, above all, at thorough mastery. *Non multa, sed multum*. Yet the many-sided breadth of his own reading had its inevitable effect of stimulus; he taught many a boy to read for himself. One branch of research, modern criticism of the Bible, he carried far; it was his favourite line of special reading. To examine the work of the Upper Fifth form as presented by him was an education in method for a young master. It was also a lesson in the true teacher's spirit; for he was as ready to listen to what his juniors might have to offer as he was ready to share and discuss his own ripe experience. His was emphatically a generous and receptive nature.

As a colleague, in the Common Room, at masters' meetings, he was a very real power, and his opinion had always to be reckoned with. On matters which seemed to him to involve principle, he held strong views; they were not lightly formed, nor easily influenced. Put him on any committee and he was sure to be a shaping force, if not to lead. You might differ from him, but could never ignore him. His natural force of will made him a warm supporter, and a tough, though always courteous, antagonist.

Of late years he had been a member of the College Council, and all who know the recent history of the College know what a large share Thompson has taken in originating and carrying out the great plans of improvement that have changed the face, though not the spirit, of the place. His watchful activities were untiringly exercised upon what he believed to be the highest interests of the School.

Politics occupied a large share of his mind, and he advocated the cause of Liberalism, which to him stood for light and progress, first in the old Parliamentary Borough, then in the larger electoral division of East Wilts. His genial humour and homely manner of talking rather than speaking, and more, his generous charity and real sympathy with the agricultural worker, made him a popular force in many a country village.

He had many hobbies. He inherited a taste for art from his father, who was an amateur artist of considerable merit, and he loved the interesting pictures and works of art which he gradually collected. For books he had a real passion, and his library was large and good. He joined with the founders of the Natural History Society in the enthusiastic study of botany; he was never so happy as when roaming the fields for the study of plant-life, or when planning his beautiful garden, and stocking the greenhouses which were one of the treasures of Marlborough; for he loved to show them.

On the man himself the pen of a friend would fain dwell lovingly, but the time is not yet. It was good to have known him.

REVIEWS AND MINOR NOTICES.

William Pitt and National Revival. By J. HOLLAND ROSE, Litt.D. (7s. 6d. G. Bell.)

This is the first of Dr. Holland Rose's two volumes on the life of William Pitt and the history of England under his government; it is now reissued at a reduced price and, as its title implies, extends to the eve of the outbreak of the war with France. It will, we confidently hope, be followed by a like reissue of its companion volume, which deals with Pitt as a war minister. The instalment before us, in spite of some defects in writing and in balance of treatment, is, we consider, worthy to be classed among the best of our scientific histories; it is based on a thorough examination of authorities, both in print and in manuscript, and a critical use of them. An introductory chapter gives us an interesting picture of the national life on its political, social, and economic sides during the closing years of the American war, along with some thoughtful remarks on the connexion between the increase of production consequent on mechanical inventions and the progressive tendencies of society in the later years of the century. Then, passing to the biographical part of his work, Dr. Rose writes of Pitt's youth and his life at Cambridge, and observes that, while he owed in some degree his remarkable attainments to an admirable tutor, he would probably have lost the stiffness of manner and lack of geniality which were drawbacks to his qualities as a parliamentary leader if he had been educated at a public school. He entered Parliament in 1781, when the country, though confronted with "a world in arms," was in a state of political torpor. This unwholesome condition is attributed to the king's system of government. George was, in truth, fighting the Whigs with their own weapons. It did not affect Pitt and some other ardent spirits. He naturally attached himself to the group headed by Shelburne, which claimed to represent his father's political ideas, and as a private member brought in a Bill for the reform of Parliament. His later attitude towards this question is ably discussed. Early in his career as Prime Minister he laid proposals for reform before the House of Commons, but after his defeat in 1785 he made no further effort in that direction. Dr. Rose's defence of his conduct in this matter seems to us convincing. As Chancellor of the Exchequer under Shelburne he was brought into collision with Fox, whose retirement from office after the death of Rockingham is condemned as hasty and ill-tempered, for, though there were differences between him and Shelburne with reference to the peace with America, they did not affect the main question, and his attack on Shelburne made the breach between himself and Pitt irreparable. The scandalous Coalition administration seemed to have secured their position when Pitt, who had ably opposed Fox's India Bill, found himself in a minority of one to two. But George was too much for them, and Pitt became Prime Minister before he was twenty-five.

He had to encounter great difficulties in forming his Ministry. Among those who refused to join him was, it is established here, Cornwallis, to whom he offered the Lord Lieutenancy of Ireland; the refusal of his brother-in-law, Lord Mahon, was not so strange as Dr. Rose represents it, for Mahon sat for one of Shelburne's boroughs, and Shelburne was sore at being excluded from Pitt's arrangements. When he had formed his Ministry he had to meet a hostile majority in the House. On his struggle with Fox and its triumphant ending, Dr. Rose justly observes that he "looked away from the votes of a corrupt Parliament to the will of the nation." He did not take office as a "king's friend," and George, while defeating the Whigs by unconstitutional means, practically put himself under the authority of a Minister who was strong in the nation's confidence. The insecurity of Pitt's position for some time after the overthrow of Fox's followers is well brought out; it was by no means strengthened by what seemed to be persecution of his popular enemy by the continuance of the Westminster scrutiny. We cannot admit that it is probable that he acted in this matter rather "from the dictates of political morality" than from personal

feeling. The theory is absolutely baseless: he made a mistake, and even the king was conscious of it. Besides his defeat on the reform of Parliament and on a fortification Bill, he was forced to modify his proposals for the admission of Ireland to financial equality, and finally saw his plan dropped in Ireland. It was a noble attempt at conciliation, and its failure, due to factions in both kingdoms, was grievous.

The account of Pitt's famous India Bill is followed by an examination of his conduct with reference to the attack on Warren Hastings, which proves that it was not inconsistent, and that he must certainly have acted from purely conscientious motives. In finance he at once did a great work in checking frauds on the revenue by the reduction of duties, a measure peculiarly befitting a minister who was an admirer of Adam Smith, though his debt to him was, Dr. Rose believes, less than is sometimes asserted. So, too, it is, we think, conclusively proved that in his provisions for the Sinking Fund he owed far less to Dr. Price than Lecky and others supposed. A commercial treaty with France should have been the corollary of the Treaty of Versailles; its accomplishment was delayed by Pitt probably for the reasons given here, and Dr. Rose points out that it was urged on England by Vergennes. Some of his remarks on the treaty (pages 322, 343) may perhaps lead his readers to believe that it established what is generally understood by Free Trade between the two countries. In truth Vergennes, who was an adherent of physiocratic doctrines, desired it for the promotion of French agriculture, as well as for diplomatic reasons; while Pitt, in the negotiations for reciprocity, drove as hard a bargain as he could for the benefit of English manufactures.

A pleasant feature in this book is the large amount of personal details it contains. Dr. Rose excels in characterization, and the persons whose doings he records are not mere names to be remembered, but are made alive for us; while what he tells us about Pitt's friends helps us to learn more about Pitt himself. Pre-eminent among them—at least, at this period—were Wilberforce and Dundas, men of widely different characters. His friendship with Wilberforce led him to take up the cause of the abolition of the slave trade, and the movement, and especially his part in it so far as this work extends, are fully recorded: though he did not do all that Wilberforce hoped for from him, he is successfully defended against any charge of lukewarmness or insincerity. Other chapters deal satisfactorily with the early days of Australian settlement, Canadian history, the ill doings of the Prince of Wales, and the Regency question.

Abroad, the dangerous isolation of England at the close of the American War continued, in spite of efforts to gain the goodwill of Frederic II and the Czarina Catharine: it was ended by the triple alliance of England, Prussia, and Holland, consequent on the pressure exercised by France on the Dutch Netherlands. The admirable work of Ewart and Harris (the Earl of Malmesbury) in promoting this change is insisted on; it was rendered possible by Pitt's financial skill and his care for the navy, which made England in alliance with Prussia far more powerful than France. But the alliance, though it triumphed over France, was weakened by the discordant aims of the allies. Pitt desired peace and security; Prussia, under Hertzberg's direction, looked to gaining a strong eastern frontier by compelling Poland to surrender territory which divided Prussia's lands in exchange for Galicia, for which Austria was to be compensated at the expense of the Turks. A question of importance to England was the future of the Belgic provinces, which had revolted from Joseph II. Frederic William desired that England should acknowledge their independence, but on the accession of Leopold II Pitt and the Duke of Leeds refused to join Prussia in a step which would have led to a war with Austria and her ally Russia, though they agreed to act with the king in finding money to support Sweden in her war with Russia.

Dr. Rose traces with a firm hand the rapidly changing course of European politics during the years 1788-90, and shows how the Triple Alliance "gave the law to Europe," curbing the ambition of Austria, which threatened to dismember Turkey, and securing the ancient liberties of Flanders

and Brabant, while Pitt thwarted the plans of Hertzberg, and by dealing drastically with the Spanish claim to sovereignty over the coast of the Pacific, laid the foundation of British Columbia. Before long, however, his policy received a rude check. Catharine of Russia declined to make peace with the Porte on the basis of the *status quo ante*, which he desired in order to secure the pacification assented to by Leopold, and would not restore Oczakoff. Hertzberg encouraged him to insist on his demand, but the Prussian played him false, for in spite of his own king's wish he was intriguing with Russia in the hope of carrying out his plan for the acquisition of Danzig and Thorn at the expense of Poland. Finally, Pitt was forced to retreat from his position rather, Dr. Rose believes, by disagreement in his Cabinet than by opposition in Parliament. Meanwhile the Revolution in France was running its course, and in contrast to the violent denunciations of Burke, we see the great Minister, mistaken, indeed, in his belief that revolutionary ideas would never invade this country, but wise in his calm attitude and the strict observance of neutrality which kept England out of war until the French forced it upon her.

The Elementary Forms of the Religious Life. A Study in Religious Sociology. By EMILE DURKHEIM. Translated from the French by J. W. SWAIN. (15s. net. Allen & Unwin.)

Prof. Durkheim, who holds the chair of the Faculty of Letters at the University of Paris, has written an intensely interesting book, and has propounded in a most lucid manner his sociological theory of the origin of religion. Whether he succeeds or not in converting his opponents, they will at least admit that his study of Australian totemism is profoundly suggestive. The title of the volume indicates the object of his inquiry. He is searching for what is most primitive and fundamental in religion, for "the ever-present causes upon which the most essential forms of religious thought and practice depend." These he finds among the Australian tribes, whose social structure, based on the clan, appears to him to be the most elementary form of social structure in existence. Occasional reference is made in the volume to North American totemism, but the author for the most part confines himself to Australia. Here, thanks to the investigations of Spencer and Gillen, and of the German missionary Strehlow, we have rich material to our hand. We are not sure, however, that Prof. Durkheim is right in his confident assertion that Australian totemism represents the most primitive form of social organization; nor has he, perhaps, allowed sufficiently for the existence of various strata of beliefs among the Australian tribes. He tends to treat Australian totemism too exclusively as a homogeneous whole, whereas, in point of fact, it may represent the result of a considerable evolution.

It is an old difficulty this, how to define religion, or, indeed, any subject-matter which admits of development. If you say that the lower stages of religion contain the essence of the whole, are you not unfair to the higher stages? If you say that the end explains the beginning, then you are apt to read into the earlier stages more than they contain; while, if you take as your criticism of religion the elements which are common to all forms of religion, you reach a result which is very thin and meagre. Now, the author begins with the lower, partly for the sake of method, but also because he insists that the lowest religions translate some human need, and reveal aspects of human life which are essential and permanent. He does not reduce the higher to the level of the lower; but, rather, true to the principle that there is nothing in the end which was not in the beginning, heightens the value of the earlier stages. It would probably prove a fruitful study to compare this writer's treatment of religious development with that of the late Edward Caird in his *Evolution of Religion*.

One interesting note of the volume, which recurs constantly, is the contention that all our logical categories have a religious origin. The categories, he says, "are a product of religious thought," and are social in origin, just as religion is social in

origin. He claims that his view enables him to mediate between empiricism and the *a priori* creed of Kant. But we are in some doubt whether he has correctly stated the Kantian position. Kant was not concerned with asking the psychological question how the categories arose in the mind of any individual; but he was asking the logical question, what necessary presuppositions he had to make in order to account for the existence of experience and knowledge. His answer was that the mind supplied certain forms which it imposed upon the flux of sensation; but he surely never dreamed of endowing the baby with a ready-made apparatus of the categories. In other words, when Prof. Durkheim claims to mediate between Kant and empiricism, he is undertaking a task which is unnecessary, for Kant would never have denied the evolutionary origin of the categories, though he did stoutly deny—and surely proved his point—that empiricism could account for our mental outfit.

We can only touch in barest outline upon the writer's account of totemism. Here are his main contentions. He finds the "distinctive trait of religious thought" in the division of the world into two spheres, the sacred and the profane. The presence of this division characterizes all known religious beliefs. Thus he rejects the idea of the supernatural and mysterious as giving the differentia of religion. He attacks the animist theory of Tylor and Herbert Spencer, and the naturist theory of Max Müller, and his criticisms here seem to be sound. Certainly on both these theories you have religion reduced to an hallucination, for the animist finds the origin of his sacred beings in the imaginary conceptions formed during sleep; while Max Müller is in no better case, since the phenomena of Nature were, according to him, first likened to human acts and subsequently were personalized. What was originally a metaphor was thus taken literally. Prof. Durkheim, on the other hand, insists that religion is rooted in reality and expresses a permanent need of humanity. This need is sociological. The primitive man feels himself to be one with his society. The Australian does not separate himself from his clan; hence his "religious representations are collective representations which express collective realities." The name of an Australian clan is the name of a determined species of material things (usually an animal or vegetable), with which the members of the clan believe they have special kinship. Indeed, the members of the clan share in the life of the totem, and frequently picture the totemic emblem on their bodies to illustrate their common descent. Thus a moral unity is given to the clan by the presence of the totem, much as a regimental flag helps to unite the members of the regiment.

Now, the totemic cult is not addressed to any personal God or spiritual being, though belief in such is found in some more advanced forms of totemism. But where it exists it is a derived and secondary product. The totem stands rather for an impersonal force, or common principle in which all the totemic emblems share. "Totemism is the religion, not of such-and-such animals or men or images, but of an anonymous and impersonal force found in each of these beings, but not to be confounded with any of them." The totem is "the material form under which the imagination represents this immaterial substance, this energy diffused through all sorts of heterogeneous things." Whence comes this belief? From society, answers our author. Totemic religion is a reflection and outcome of the social structure of the Australian clan. The individual dies, the clan endures. The individual is weak, the clan is strong. When the clan meets for a religious rite the enthusiasm generated quickens the moral and social life of the individual. At the same time the clan, as it were, renews its existence, and the totemic rites strengthen and revivify the social sentiments. This religion, therefore, meets a need, and is rooted in reality; for no one can deny the moral force of society, on which we all depend.

We have no space to deal with the author's attempt to show how a belief in souls and spirits and divinities grew naturally out of this primitive totemic cult; but his whole treatment of these problems is most stimulating. In conclusion, we would point out one or two blemishes in the translation. On page 176

we have this sentence, "it is not desired in its and for itself," surely an atrocity of style. On page 276 we read: "In a society like the Arunta, where each one has his protecting ancestor, there would be as many or more gods than there are individuals." "Adjective" for "objective" occurs on page 413, and on page 436 "sub species aeternitatis." In at least six places (e.g. pages 205, 207, 221, 224, 259, 367) "imminent" is printed where "immanent" is intended.

The Political Writings of Rousseau. Edited from the Original Manuscripts and Authentic Editions, with Introduction and Notes, by C. E. VAUGHAN, M.A., Litt.D. In 2 vols. (£3. 3s. net. Cambridge University Press.)

These two volumes give, for the first time in a collected form, all Rousseau's political writings. Dr. Vaughan's main object is, first, by gathering together all these writings, to enable people to make a truer estimate of Rousseau's political opinions; second, to give, as far as possible, the correct text, which in many editions is most corrupt; and, third, to define Rousseau's place in the history of political thought. It may seem that such a book hardly comes within the scope of an educational journal, but, as Dr. Vaughan points out, among the subjects to which Rousseau constantly returns is "the overwhelming importance of a sound system of education to the well-being of nations."

In studying Rousseau's theories on this subject educationists have been inclined to confine themselves to the study of *Emile*, and have in consequence gained but a partial and one-sided view. Dr. Boyd, in his book entitled *The Educational Theory of Jean-Jacques Rousseau*, points this out very clearly. His whole book is a demonstration of the fact "that the right method of approach to his theory of education is not through *Emile*, but through his whole social philosophy."

It follows that readers of Dr. Boyd's book immediately feel the need of such a work as that of Dr. Vaughan. It is so obvious that Rousseau's political views have coloured through and through his educational views. It is no longer possible to regard Rousseau as the advocate of an extreme form of individualism, as *Emile* seems to show him. We have to realize that Rousseau never settled the conflicting rights of the individual and the State. In *The Social Contract* we find an extreme form of collectivism—the individual sacrifices individual freedom for social freedom; to the sovereignty of the State he submits "his powers, his possessions, his liberty, his very will and self." It is true that this statement is later qualified by one to the effect that the individual surrenders only that which is of service to the community, the State being the exactor of such service.

In a sense it is easy to account for this conflict in Rousseau's mind. He was an ardent disciple of Plato; he loved his native city state of Geneva, and found his ideal in the civic life of that city; and yet in his person he was a thorough-going individualist—a hater of society, citizen of no city. Implicitly in *The Social Contract*, and explicitly in *Political Economy* and *The Government of Poland*, education is to be a public matter, under State control. In *The Government of Poland* Rousseau says: "All men, being equal by the constitution of the State, should be brought up together in the same way"; and in *Political Economy*: "Public education, under rules prescribed by the Government, and under magistracies established by the Sovereign, is therefore one of the fundamental maxims of popular or legitimate government."

This seems a far cry from the education of *Emile*, and we begin to realize that on the one hand we are shown the individual in a remodelled society; on the other, in *Emile*, the natural man brought up in such a way as to remain natural, and yet fit into ordinary unregenerate society. We have in *Emile* Rousseau's compromise, not his ideal, in education.

The anti-social education of Books I to III is due partly to Rousseau's views on natural development, as well as to his ineradicable personal mistrust of society. Even in an unregenerate society, Rousseau prefers domestic education; the

tutor is a literary artifice to enable Jean-Jacques the man to appear as well as Jean-Jacques the child.

Emile is rich only because the rich are in a worse state than the poor, who are educated by life. Nor has he really that untrammelled freedom Rousseau would have us believe. As Dr. Vaughan truly remarks: "It becomes apparent that the instrument of training and discipline which is the law-giver and the State in the *Contrat Social* is the tutor in *Emile*."

Yet with all these qualifications there are fundamental differences in Rousseau's views which are never reconciled. But it becomes obvious that no true estimate can be formed of his theory of education without (1) some understanding of his politics, (2) a knowledge of his views on education given in his political writings.

Only after such a study shall we realize the truth of Dr. Vaughan's words: "Socialist, in the strict sense, Rousseau was not; but he was collectivist, heart and soul. . . . He gave men faith in their power to redress the wrong of ages. And he held forth an ideal of civic life which has changed the face of Europe." This would hardly have been the verdict of the student in education who had studied only *Emile*, and yet it is probably the true estimate.

The Cambridge History of English Literature. Vol. XII: *The Nineteenth Century*. (9s. net. Cambridge University Press.)

The twelfth volume of *The Cambridge History of English Literature* is the first of the three which are to cover the period of the nineteenth century. Wordsworth, Coleridge, and Southey were dealt with in Vol. XI, under "The Period of the French Revolution." The present volume picks up the somewhat capricious leavings of the preceding volume, and opens with a chapter on Scott.

Dr. T. F. Henderson writes with a Scotsman's enthusiasm and knowledge highly suitable to his subject, but with a certain heaviness of manner and limitation of view that do not suit it so well. He believes that Scott's "distinctiveness as a novelist largely depends on his historic and antiquarian enthusiasms." Does it not more largely depend upon his particular taste for human nature, formed and sharpened by the study of his own living countrymen? Dr. Henderson does scant justice to the debt of Scott to Coleridge in his statement: "*The Lay*, apart from the metre, has little in common with . . . *Christabel*." The metre was more than half the battle; the metre, with its haunting repetitions and subtle variations, was Coleridge's contribution to the romantic tale in verse, attempted by Wordsworth, popularized by Scott, and run to death by Byron. But, apart from metre, *The Lay* owes much of its romantic appeal to echoed phrases and reminiscent touches of description from *Christabel*. The chapter, as a whole, is solidly appreciative, but too long-winded.

Byron is treated with sufficient admiration by Prof. Moorman, who does full justice, where justice has not always been done, to Byron's devoted championship of political liberty, and sets forth the facts of his life fairly and generously. His treatment of his most admired poetry is hardly critical enough. A closer exposition of the curious relation between Byron's theory and practice of poetry would have shown how the insidious faults of his style, slipshod language and cheap rhetoric, are related to its finer qualities.

Prof. Herford's two chapters, on Shelley and Keats respectively, are the best chapters in the volume. Apart from his tendency to unqualified praise and his use of the adjectives *Shelleyan* and *Keatsian*, there is little to criticize. In the Shelley chapter we should have liked some analysis of the unique quality of this poet's imagery and some indication of the important influence of Wordsworth on his thought and style. On Keats Prof. Herford writes with warmth and justice, but seems uncritically blind or indifferent to the "sensuous" element in his nature and poetry. It is unfortunate that he should refer (page 92) to Keats's *Bright Star!* sonnet as his last poem, written in September, 1820. The discovery (*vide Times Literary Supplement*, February 18, 1915) of an earlier version of this sonnet, under the date 1819, raised the question of the actual date of its

composition. Sir Sidney Colvin is inclined to place it in March, 1819, but it seems more likely that it was written at Shanklin in July of that year [*vide* Keats's letter to Fanny Brawne, July 25, 1819.]

The Prose-writers are treated somewhat unequally. Hazlitt gets the lion's share both of pages and of praise. Through the length of sixteen pages (De Quincey only gets six), Prof. Howe, of the University of Indiana, reiterates his unqualified and somewhat indiscriminating admiration. There is no notice of Hazlitt's tendency to rhetoric, of his unfairness in criticism, nor is there even a judicious development of Keats's theme, "Hazlitt is your only good damner." The chapter is not incisive enough, nor "salty" enough, to be worthy of Hazlitt.

Lamb's life and character and the general qualities of his style are well appreciated by Mr. A. H. Thompson, but his unique value as a critic is not made clear, nor is he placed in the interesting relation in which he actually stood to the great creative writers of his age.

Landor, Leigh Hunt, and De Quincey are, somewhat unfortunately, herded in one chapter. Landor mixes with De Quincey no better than water with oil, though the two form an interesting study in contrast. Leigh Hunt has nothing to gain and everything to lose by being sandwiched between his betters. The comparative method necessitated by this collocation of authors is something of a snare to their critic, Prof. Saintsbury. He compares, adjusts, modifies, deducts in too tediously discriminating a fashion, and in the end fails to reveal to our satisfaction the intrinsic quality of each author. His estimate of Landor is cold to a degree. He misses the most beautiful of the *Hellenics*, and never gets to the heart of the more passionate of the *Imaginary Conversations*. He is warmer to De Quincey, but does not reach the higher qualities of his style, nor the value of his literary theory. The result is a certain amount of stimulating criticism which, in a manner unusual with Prof. Saintsbury, inarches and counter-marches round the subject and fails to strike home.

The final chapters on Prose deal with subjects only bordering on literature, The Oxford Movement, The Growth of Liberal Theology, Writers on Ancient and Early Ecclesiastical History. The general impression of the volume is one of solidity and good intention. The bibliographies are extensive and useful as before.

Psychology of High School Subjects. By C. H. JUDD. (6s. net. Ginn.)

This is in many ways a very suggestive book, more particularly for specialist teachers, for it raises all kinds of pedagogical questions. Yet, in a sense, it is a baffling book, for the plan of it removes any kind of systematization of the questions raised; there are no suggestions as to the possible method in experimental psychology of determining the answers, and the multiplication of varied opinions leaves the mind in a hazy state. There is little attempt at constructive work, nor can we find ourselves altogether in agreement with some of Prof. Judd's suggestions. For example, he is inclined to urge the teaching of geometry before that of algebra from historic reasons. We doubt the soundness of the contention; the late development of algebra is surely best accounted for as retardation through lack of the invention of appropriate symbols, a phenomenon often observable in mathematics. Given a convenient notation, the subject may lose many of its difficulties. Again, the chapter on the Fine Arts ends with many strange pronouncements. Can teachers demonstrate the appreciation of their pupils as they would a proposition in Euclid? Is it so certain that habits of mind and action cultivated in the arts must conform to those cultivated in scientific work? The first and the last three chapters are on more general matters, including an interesting one on the doctrine of formal training. If any teacher feels himself in a groove, a study of this book will make him think and raise problems for him, though it may not take him far towards their solution.

Education and Social Progress. By ALEXANDER MORGAN. (3s. 6d. net. Longmans.)

Dr. Morgan's book aims at showing that the diseases of society are not "inevitable," that "in social science we are aiming more and more at attacking the diseases of society at their source rather than relieving them after they have manifested themselves," and,

finally, that the chief preventive agency is education. While there is nothing strikingly original in the treatment of the problem of social progress, the book gathers together the most recent opinions on the subject and their application in a clear and interesting way. It is a book that might be read with great advantage by students in their last year at a training college; too little has been done so far to draw their attention to these social problems. We miss a reference to the interesting work of Mr. Homer Lane in his Dorsetshire settlement, based on the work of the George Junior Republic in America.

We have received from Messrs. George Allen & Unwin two new editions—(1) *How Gertrude Teaches her Children*, now in its fifth edition (3s. net); (2) *Autobiography of Friedrich Froebel*, now in its twelfth edition (2s. 6d. net). Such successful translations speak for themselves.

The Musical Education of the Child. By STEWART MACPHERSON. (2s. 6d. net. J. Williams.)

We are glad to find in book form the pronouncements made by Mr. Stewart Macpherson during the last few years on the subject of the musical education of the child. Mr. Macpherson has done invaluable work in this matter, notably in two directions: he has shown (1) that musical education should be one in listening and appreciating as well as in performing; (2) that the music teacher should be one who has had an all-round education, and that he must be trained how to teach. There were signs, at any rate before the War, that music was coming to its own in the schools, and it may fairly be said that it is very largely due to Mr. Macpherson. All head teachers, primary and secondary, should read this book, and then they can study Mr. Macpherson's practical handbooks, which show he is no mere theorist but a very experienced teacher.

Mon Premier Livre de Français. By F. M. S. BATCHELOR. (2s. 6d. Clarendon Press.)

Miss Batchelor's book, intended for children of ten to twelve, is on very simple lines, containing, as it does, only matter for conversation and reading, exercises for speech and writing, and the necessary minimum of grammar. The child who uses it will begin by speaking about objects in the classroom, and go on quickly to pictures. A *questionnaire* follows each lesson, but the author is careful to tell us that the questions are meant to be representative, and not exhaustive. In the latter part of the book come fairy tales and short stories. There is no attempt to explain the new words; very sensibly, the teacher is left to do that in his own way. Free Composition begins in the second lesson, a doubtful boon. We agree with Miss Batchelor's view that we learn by making mistakes, but children have always sufficient opportunity of doing that, and the weakness of letting them write at large is that they try to say what it is quite impossible for them to say. The grammatical summary at the end is a useful feature, and some teachers no doubt will welcome the phonetic transcription, which is separate from the rest of the work. By the way, what is the author's synonym for *déjeuner*?

Black's First German Book. By L. H. ALTHAUS. (2s. 6d.)

Miss Althaus's book opens with rigorous exercises in phonetics. All the technical terms are given in German only, presumably for the benefit of the teacher alone. The advice that the sounds should be sung is valuable. The whole work is on the strictest Direct Method lines, but grammar is taught very precisely from the beginning, and children are expected to learn the rules in German, just as their forefathers learnt them in Latin. On page 10 comes "Das Wort 'der' ist der bestimmte Artikel." The rule that intransitive verbs are conjugated with *sein* is unsound. The general plan of the book seems good, but it is surely a mistake to introduce the learner to four different ways of making the plural in four early lessons, and to put the present of *geben*, *werfen*, and *fangen* into two lessons, just when he is beginning the conjugation of verbs. Many teachers will shy at the poetry, which contains too many idiomatic turns. The explanations in German of words in the pieces for reading do not reconcile us to that substitute for translation. What is to be made of "Das Korn ist eine Pflanze; der Ast ist der starke Baumzweig am Stamm, gehaust = schlecht gewirtschaftet"? This is explaining the unknown by the equally unknown. For the typography and woodcuts we have nothing but praise, and the coloured picture of "Die Wichtelmänner" is a work of art. Pity that the last letter is lacking in the title under it!

The Mistress of All Work. By J. G. SIMS. (1s. net. Methuen.)

This is a book of domestic economy; but, unlike the many volumes with similar titles, it is wholly free from all technicalities. It points out in unaffected language how the modern woman can best tackle the various problems of household management, such as furniture, sitting-rooms and bedrooms, kitchen and cooking, and clothes. Women are roughly divided into two classes—professionals and

rentiers—but there is no attempt to differentiate them further, and no hint that they might do well to prepare themselves, either at school or college or in special institutes, for what is recognized as one of the chief functions of every woman's life. Doubtless to many readers it will appear a distinct gain that there is not the remotest allusion to the War. Thus the "fireless cooker" is commended and described, "that obtainable in this country being usually, I fancy, of German make," and "the dustless brush that goes by the name of the 'Renovator' may be a joy for ever, but it will not be found in Civil Service lists." We are far from condemning a book of pleasant gossip, and only warning young housewives not to expect an up-to-date treatise on domestic economy.

English Economic History: Select Documents. Edited by A. E. BLAND, P. A. BROWN, and R. H. TAWNEY. (6s. net. Bell.)

The rapid growth of interest in social and economic history abundantly justifies the publication of this important work. Moreover, its utility is increased by the fact that these old documents are done into English. It may be that the English is a little peculiar at times, but the documents from which they are translated were often in mere dog Latin or French of an unclassical kind. There is every reason why they should be as readily understood of the people as possible. They are divided into three parts, from A.D. 1000 to the repeal of the Corn Laws in 1846, and cover such subjects as the manor; towns and guilds; the regulation of industry and commerce; taxation, customs, and currency; regulation of prices; Government regulation of wages and conditions of employment; combinations of workmen, &c. What will probably strike the average reader is the late date at which bondage and serfdom existed in English history. There are documents, dated 1350–1358, showing that lords of the manor claimed men and women as their bondmen and bondwomen, and that these owed services, fines on marriage, and chevage (poll or head money); that they had no power to move about the country, but had to remain on that manor where the lord had a claim on them. Regulation seems to have been very minute touching the common fields or cultivated strips. There was to be no "accidental" straying of beasts on to the wheatfields of others. When it happened, handsome fines had to be paid to the injured cultivators, and the Church always claimed an additional penny on every straying beast. No pinching of sheaves could be permitted. The regulations are ultra-emphatic: "Also no man or woman that works harvest work bear home no sheaves of no man's." And gleaners were under careful supervision: "Nor no other gleaners, that may not work, glean in no manner of wise among no sheaves, for, if they do, they shall lose the corn and a penny to the Church for each burden." We appear to be quite wrong in the supposition at the back of most people's minds that minute regulation is a result of modern industry. If we consider the enormous quasi-geometrical increase in population and the complexity of modern conditions, it is highly probable that legislation has not nearly kept pace with evolution. It is noteworthy, too, how often women are joint holders of tenements with husbands or other male relatives, and how often they claim their rights and acknowledge the customary obligations in the manor courts. Altogether this is a most useful and informing book, well deserving careful study. It throws a strong light on the present and explains much that is not readily understood.

Social and Industrial History of England. By F. W. TICKNER, D.Litt., M.A., B.Sc. (Econ.). (3s. 6d. net. E. Arnold.)

This is another useful volume dealing with the social and industrial history of England, deserving praise both for its aim and its achievement, for excellent type and illustrations, and for its modest price. We know that Great Britain has ceased to be an island; and yet its insularity, as well as its nearness to the Continent, have profoundly influenced its development. Dr. Tickner considers that we have been sufficiently near the Continent "to take from both Teuton and Latin races whatever has been best in the experiences and ideals of each of them." We do not wish to cavil at this statement in an epoch of revolution, but it might have been well if we had occasionally looked at our neighbours' doings with a little more sympathy and comprehension. Dr. Tickner takes us right back to life in an early English village, when England was divided into more than nine thousand manors: those "good old times" when nearly everybody, including the king, "lived of his own"; when free-men were relatively few, and all the rest owed *corvées* to the lord, and when a certain number were practically slaves. All this method of life—the division and working of the land, the self-sufficing character of each manor, the officials of its lord—is presented with some degree of skill. The same roof often covered the humbler classes as sheltered the pigs, poultry, and cattle, just as it still does in the remoter parts of Ireland, and even Scotland. The description of the furniture, food, dress, holidays, conveys a clear impression of the long way we have travelled. The development of towns, the

reasons for their growth, the purchase of their privileges bit by bit, including the right to trade; the status of the citizens, the guilds, both merchant and craft, seem to convince us that if ever there has been an epoch of freedom, it certainly has been only relative. Other chapters deal with the part the Church played in the life of the people; the chancel was always the rector's, the nave was the people's, and they were willing to spend money on its decoration and repair. A brief history of the monasteries, the different "rules" that formed part of English life, architecture and its illustrations, all convey a picture of bygone days. Space is given to the gradual development of our government, its great attempt to preserve liberty, its weakness in the lack of centralized authority. Altogether this is a comprehensive and helpful volume. It does not regard Waterloo as the *Finis* of our history, but deals with the passing and the abolition of the Combination Acts, the rise and modifications of Trade Unionism; it examines the sixty years of Free Trade, modern banking, and the development of joint stock companies; it treats of education, free and compulsory: even garden cities, the roller-skating rink, the "movies," co-operation, allotments, the general restlessness and emigration, receive a certain amount of notice, and help the reader to realize how much we are in the melting-pot at the moment, and how desirable is the application of some general principles, such as the French applied to their great effort in social reconstruction at the end of the eighteenth century, if we are building that we may endure.

"Black's History Pictures."—*The Middle Ages, 1066-1485*. Selected and Edited by G. H. REED, M.A. In Six Parts, of which this is Part II. (10d. per Part.)

The Board of Education itself has declared that "illustrations are an indispensable aid at all stages to the study of history," and this excellent set of 90 pictures will induce everybody to agree with the dictum. Dress, architecture, coins, seals; events, such as the Coronation of William I, the Election of Stephen to the Throne, the Murder of Becket, King John taking the Oath to observe the Great Charter—pictures painted by artists on historical subjects—are reproduced for us. Palaces, colleges, churches, have been searched to yield their contribution, and even Rodin's sculpture of the brave citizens of Calais is reproduced for us. We wish such pictures could be utilized at the cinema, and that every school could borrow or hire a lantern and have these admirable illustrations thrown on the screen several times every term. The idea is applicable to botany, zoology, art, and other subjects. Perhaps when we cease throwing shells at £1,000 apiece there may be a few pence left in the Exchequer to utilize for such educational purposes.

The Destruction of Belgium. Germany's Confession and Evidence. By E. GRIMWOOD MEARS. (3d. net. Heinemann.)

This pamphlet is a reply to the German White book on the conduct of the German troops in Belgium by one of the Joint Secretaries to the Committee on alleged German outrages. It is singularly calm and dispassionate; there is no piling up of horrors, and the reader is left to draw his own conclusions from the evidence, quoted throughout in detail. The only missing links that the author supplies are to show how completely the German Apology fails to meet the charges brought by the Allied Governments and how the most flagrant are passed over in a silence more damning than any words.

Europe's Debt to Russia. By CHARLES SAROLEA. (3s. 6d. Heinemann.)

This, the preface informs us, is an attempt to give a systematic and co-ordinated survey of Russian history and policy. Such assuredly it is not, and from the same preface we learn that the concluding chapter is the reprint of a paper written at Moscow in 1905, the *Annus Mirabilis* of the Russian Revolutionary movement, which the author was repeatedly urged by the late Count Tolstoy to republish because his forecasts were verified in every detail. Dr. Sarolea is, indeed, the Ulysses of the age, and in his leisure hours he has visited, so he informs us, every important ghetto in Europe, Asia, Africa, and America. He has travelled up and down Russia, knows it in and out, and so is able to anticipate by ten years the famous message of the Tsar to his Army. He looks at everything with forward, not reverted, eyes, and we will not essay to follow him in this rehabilitation of the "Chosen People." But we may venture again to break a lance with the editor of *Everyman*, who, in face of purblind pedagogues, confidently prophesies that, before the schoolboy of to-day has attained to maturity, the study of Russian will have taken the place of Greek, Vladimir Solosyev will be studied instead of Plato, Karamzin and Pushkin will oust Livy and Virgil, and the Slav enjoy his own again. Russia is a primitive people with infinite possibilities before her, but we may safely predict that generations must come and go before Russian is taught in our schools as Latin and Greek are now taught, that there is nothing in the language to be put instead of the *Apology* of Plato, the *Agamemnon* of Aeschylus, or the Gospels, that Virgil will be

preferred to Pushkin, and Dr. Sarolea, or his successor, still instruct his pupils in the French immortals, in Racine and Molière, La Fontaine and Taine.

Dostoevsky: His Life and Literary Activity. By EUGENII SOLOVIEV. Translated by C. F. HOGARTH. (Allen & Unwin.)

Dostoevsky, a name unknown to the English public some twenty years ago, has leapt into sudden fame, thanks mainly to Mrs. Garnett's translations of his two greatest novels, and we welcome anything that will throw new light on his genius. Mr. Hogarth, already known to us by his translation of Andreiev's *Life of Man*, has done his work admirably, and it was well worth doing, but readers must not expect more than is in the original. M. Soloviev wrote for a public to whom the facts were familiar, and he tells us little of the circumstances of his arrest and his almost miraculous escape from being shot with the other prisoners, and the vicissitudes and all that is recorded in *The Brothers Karamazov*. But he reveals to us the inner man. A Russian more typical than Tourguénief and more eccentric even than Tolstoy, but perhaps more characteristic of the coming race than either.

Sources of the Synoptic Gospels. By CARL S. PATTON. (6s. 6d. net. Macmillan.)

This volume belongs to the "Humanistic Series," published by the University of Michigan, and is a scholarly and elaborate study of the synoptic problems. The author sums up the results of recent investigations and, in addition, makes his own personal contribution to the elucidation of certain special points, particularly in regard to the analysis of the document known as Q. Scholars are agreed that both Matthew and Luke used Mark, and, indeed, depend on him for their narrative material. In addition, they used Q, which, the author maintains, "was originally an Aramaic document, used by Matthew and Luke respectively in two Greek translations that went back to two different Aramaic texts." He analyses Q into Q Mt. and Q Lk., and assigns to these two recensions much matter which has hitherto been attributed to unknown sources. In addition, following Mr. Streeter's argument in *Oxford Studies*, he shows that Mark also used Q, but in a form earlier than the forms known to Matthew and Luke. The volume is one essentially for scholars, who, we think, will be grateful to Mr. Patton for shedding new light upon a complicated problem. We note in the book the use of phonetic spelling—e.g. "thruout," "thorouness," "thru," "brot" (brought).

The Book of the Prophet Isaiah in the Revised Version.

Chapters i-xxxix. With Introduction and Notes by Rev. J. SKINNER, D.D. (3s. Cambridge University Press.)

It was in 1896 that Dr. Skinner published his edition of *Isaiah i-xxxix* in the "Cambridge Bible for Schools and Colleges Series." Last year he re-edited the commentary, taking the translation in the R.V. as his text. The present commentary is somewhat larger than the earlier one. The Introduction has been re-written, and the notes have been considerably modified. We note, too, a welcome improvement in the shape of a bibliography. We hope that in course of time the other volumes of this series which deal with the prophets will be republished with the R.V. as their basis; for nowhere is the value of the newer translation more apparent than in the case of the prophetic writings. In addition, while the New Testament revisers often sacrificed unnecessarily style to scholarship and pedantry, the revisers of the Old Testament preserved throughout their literary sense. Dr. Skinner has done his work well, and his commentary will be much appreciated.

The Dawn of Religion in the Mind of the Child. A Study of Child Life. By EDITH E. READ MUMFORD, M.A. (1s. 6d. Longmans.)

We already owe a debt of gratitude to Mrs. Mumford for her sympathetic and illuminating book, *The Dawn of Character*. Those who found help in that book will find here an equally sympathetic study of religious awakening in the child's mind. As in the former book, Mrs. Mumford supports her arguments by numerous examples drawn from first-hand experience; the book rings true and could not possibly be written except by one who knew and loved children and had made them her especial study. We agree with all she says, and have but one regret: how can such things be for those who live "across the bridges"; what are we to do for the children whose nursery is the street, whose home knows no religion, who is one of a crowd of sixty or more in school?

Ovid: Stories from the Metamorphoses. By B. H. JOHNSON and R. B. FIRTH. (1s. Longmans.)

This seems a pleasant selection, though we miss the story of Pyramus and Thisbe. Ovid's hexameters are in some ways preferable for class reading to the elegiacs, which in spite of (or is it because of?) their perfection tend to seem monotonous and unreal. As usual in this type of school book, the accessories rather overpower the text. It seems to us that what a good teacher of lower

and middle forms wants is cheap reading books of a simple kind, not overburdened with notes and introductions. The present editors are sound on the notes question, but since these notes consist almost entirely of references to the Shorter and the Revised Latin Primer, why should not the boys be sent to the same excellent authority for prosody? And would not a mere chronological summary of the author's life be enough to give, leaving the teacher to suit himself and his class with regard to the details and the style in which they are narrated?

Robert Louis Stevenson. By AMY CRUSE. With Ten Illustrations. (1s. Harrap.)

This is an interesting and agreeably written biography; and its low price puts it within the reach of many to whom Graham Balfour's *Life* is inaccessible. Miss Cruse aims primarily at giving a true picture of Stevenson as a man, leaving his writings to speak for themselves. As she says, it is too soon for a final verdict to be passed on Stevenson as a writer. The brief criticisms and appreciations of his books and style are sound and well expressed.

An Introduction to the Mechanics of Fluids. By E. H. BARTON, D.Sc. (6s. net. Longmans.)

This is a valuable addition to our stock of elementary manuals. In its practical character it avoids the dreariness of the strictly mathematical textbook. At the same time, the reasoning is sufficiently rigid, and the mathematical treatment full enough (though no direct use is made of the calculus) for many students of a mathematical course. The distinguishing features are the clear descriptions and the lavish use of large and good diagrams in every chapter, but especially in that on Illustrative Apparatus.

The Essentials of Descriptive Geometry. By F. G. HIGBEE, M.E. (7s. 9d. net. Wiley.)

The author of this volume is the professor and head of the department of descriptive geometry and drawing in the State University of Iowa. His book is remarkable for the extraordinary clearness of the instructions, for its inclusion "only of those portions of descriptive geometry which possess industrial utility, and which develop the qualities of mind so essential in a draftsman," and for the excellence of the printing and diagrams.

An Introduction to Applied Mechanics. By E. S. ANDREWS, B.Sc. (4s. 6d. net. Cambridge University Press.)

The author has endeavoured, and we think very successfully, to avoid what he regards as the chief failings of old and modern textbooks—the undue devotion to theory in the one and to practical applications in the other. The theoretical work, which is ample as a first course for the needs of most mathematical students, is followed by worked numerical examples and by graphical and mechanical illustrations. Each chapter concludes with a summary, such as a careful reader would naturally prepare for himself. The book, which is an admirable one, belongs to the "Cambridge Technical Series."

The London Matriculation Directory. No. 71. January 1916. (1s. net. W. B. Clive.)

There is no falling off in the standard of London matriculation, nor in the Model Answers provided by the University Tutorial Press. Compared with the other papers, that in English strikes us as absurdly easy, and it is let off very lightly in the Comments. Thus, in the second paper, where an alternative of four questions out of six is permitted, it would be easy by a careful selection to dodge the wisest of examiners.

Numerical Trigonometry. By N. J. CHIGNELL, B.A. (2s. 6d. Clarendon Press.)

This is a useful elementary Trigonometry. It follows the plan of making quickly for the solution of triangles. The method of giving in some detail the plan of campaign in working examples is a valuable one. The proof of the addition formula by projection is better prepared for than in most textbooks, and hence should have a better measure of success than is usually the case.

Landscapes for Army Class Drawing. By L. BELLIN CARTER, F.R.S.A. (2s. net. E. Arnold.)

These black-and-white landscapes are frankly utilitarian. They doubtless supply a need and will give opportunity for practice of the particular work demanded at the Army Entrance Examination. The set comprises typical scenery, seascapes and landscapes, flat and mountainous. They might also be found useful to teachers, who often wish to enlarge some such pictures for class illustration.

Decorative Design. By T. CUMMINGS CHASE. (6s. 6d. net. Chapman & Hall.)

This book is one of the "Wiley Technical Series" for vocational and industrial schools. We can heartily recommend it. It is one of the most practical books on the subject we have seen; the letter-

press is clear and concise, the illustrations admirable. The student studying this book will have high standards set before him, and a clear conception of the problems which face the craftsman, whether he means to apply his art to textiles, wall-paper, book-covers, posters, or whatever it may be.

Selected Essays from English Literature. By ELIZABETH LEE. (2s. Arnold.)

If it were not distinctly stated on the title-page that this book is "for the use of schools," we should never have guessed it. There is a short introduction, it is true, but there are no biographies and no annotations, save a few foot-notes and the date and original home of each essay. Then, again, though at one end we have the massive Bacon and at the other the thunderous Carlyle, all between is of the gentlest and sweetest. It is surely a peculiarly English quality, that gentleness, the quality which shines in Addison, Steele, and a long line of spiritual descendants reaching to Jefferies and Stevenson. Do we in any other literature find so much sound wisdom in so airy and graceful a garb, such a delicate preaching of virtue as in the essayists of the eighteenth century? In this volume even the great Johnson forgets to growl, and purrs amiably about Molly Quick and her mistress. Mary Russell Mitford, whose work was impossible of attainment to any but an Englishwoman, is of this happy company. Surely no book for the classroom this one; rather for a big arm-chair and a clean hearth—but *not* "the rigour of the game," for you can dawdle over it to your heart's content. If schoolmistresses put it into the hands of their girls—and we think girls would like it better than boys (the young barbarians! they would probably vote it namby-pamby)—let them set it for week-end work, and let them make their pupils some time write each a composition in the style of his favourite essayist.

A Book of Verse for Boys and Girls. Compiled by J. C. SMITH. (3s. 6d. Clarendon Press.)

This is an annotated edition of the three parts together of Mr. Smith's previous publication. It is a very good collection, containing all the poems we knew and liked in childhood and youth, and providing plenty of variety for individual choice. The compiler evidently has sound views about poetry and children, and the preface to Part III is excellent. We should like, however, to question the advisability of attaching to books for the young introductions intended for grown-up people. Much of this particular preface would interest the older boys and girls, but obviously the prefaces are not primarily *meant* for the children to read. The presence of notes is fully explained in the preface to them. Why is the beginning of Tennyson's ode on the death of the Duke of Wellington omitted? We should be pleased to furnish Mr. Smith with the complete form of *Long Ago in Changeful Autumn* (page 6, Part I), which he confesses to having set down from memory. We rather regret the absence of *Lycidas*—so characteristic of Milton's style and genius at their best. In conclusion, we can thoroughly recommend the book to all children as well as to their parents and teachers.

An Anthology of English Prose. For use in Schools and Colleges. With Introduction and Glossary by S. E. GOGGIN, M.A. Lond., and A. R. WEEKES, M.A. Lond. (2s. 6d. University Tutorial Press.)

If anthologies of this kind are really necessary for the proper teaching of English literature in schools and colleges, no doubt this one will be very useful. The pieces selected are typical of their authors and interesting in themselves, while the introduction gives a brief summary of the history of English prose-writing. The danger to be feared in the use of all such books is that the student should think knowledge of their contents means familiarity with English literature. Where no good library is available perhaps extracts are better than nothing, but they cannot be educative in the true sense.

Bacon's New Atlantis. Edited by ALFRED B. GOUGH, M.A., Ph.D. (1s. 6d. Clarendon Press.)

This is a reprint of the first edition by the same editor. Obvious errors in the text have been corrected and those noted in Prof. Moore Smith's "Pitt Press Series," 1909, are rectified at the foot of the page.

A Book of Simple Gardening. By DOROTHY LOWE. (2s. net. Cambridge University Press.)

This is a useful, well-planned, and inexpensive little book, specially written with a view to garden work for a school during the year. It deals with flower, fruit and vegetable gardens, rock garden, rosery, shrubbery and wild garden. The directions are clear and sufficiently detailed, and a plan of work is made for each week of each month. Besides this, there is a special chapter on tools and one on insect pests and diseases. The book is pleasantly written and more readable than the usual textbook of its kind.

COLONIAL AND FOREIGN NOTES.

UNITED STATES.

The Gary System. The *Educational Review* (LI, 1) contains a report on an experiment made with the Gary duplicate school system (of which our Board of Education recently published a study) in a New York public elementary school. We must refer our readers to the article for details of organization, and of the two sections of work, "regular" and "special," it is only with the latter that we concern ourselves here. Special work falls, in the New York school, under the following heads:—(1) Manual Training, (2) Cooking, (3) Millinery, (4) Dress-making, (5) Drawing, (6) Science, (7) Printing, (8) Carpentry, (9) Gardening, (10) Pottery. A child is expected to take different work in a workshop or studio every term. Thus, if he chooses drawing for the first thirteen weeks of the year, he will turn to science in the next thirteen, and occupy himself, let us say, with gardening or printing in the last. What is the object of this discursiveness? It is to enable a pupil to learn by experiment the form of activity that interests him most and best fits his talent. But it must be remembered that the Gary school, whilst offering to every child an opportunity of becoming industrially efficient in a self-discovered way, does not neglect general education, and keeps its pupils as long as possible under its control. When a boy elects to go into a workshop his liberal training goes on uncurtailed, and he may learn the rudiments of half a dozen bread-winning trades whilst preparing for (the American) College. He is kept from a premature choice of a vocation.

How to Mark Handwriting. To test efficiency, to weigh results, to get definite standards—these are prominent aims of American pedagogy to-day. The *questionnaire* circulates with embarrassing frequency, and in the journals there abound proposals for a scientific measurement of merit in every domain of study. Handwriting, for example, which most of us judge from a sort of vague impression, is often estimated in the United States according to Leonard P. Ayres—*A Scale for Measuring the Quality of Handwriting of School Children*. The scale is made thus: A sheet of paper, 9 in. by 36 in., is divided into eight sections, in each section there being a specimen of handwriting. As you proceed along the strip from left to right the specimens are better in regular progression. To the eight sections the values assigned are 20, 30, 40, 50, 60, 70, 80, and 90; and, in order to mark any sample of handwriting, all that is necessary is to slide it along the strip until writing of the same quality is found. To get a very accurate marking this may be done first from left to right, then from right to left, and an average of the two estimates taken. Yet we are curious to know whether different investigators agree in their results, for the style of the handwriting involves a difficulty, and goodness depends on the approximation to the ideal contemplated. Latin prose is not written in the characters that are approved by those who invoice "pants" and "vests."

Helping the Teacher. The University of Minnesota is publishing, for the benefit of any who wish to become teachers, manuals designed to be of immediate and practical value. The first two of these (numbered 6 and 7 of *Current Problems*, and costing 25 cents each) relate, one to the teaching of Latin, the other to the teaching of history. Many of the books and aids referred to are American, yet accessible, for the most part, to English teachers; for whom, no less than for American teachers, the "Bulletins," as they are called, will have much suggestiveness. Let the reader take from his shelves a volume of the series of Latin classics prepared in *usum serenissimi Delphini*, and estimate the gain to the Dauphin—whom, by the way, the books availed little—if his instructors could have offered him, for example, magic lantern slides in illustration of the texts. Nowadays you may submit Caesar's Helvetian campaign to the eye of the learner *pari passu* with Caesar's account of it; and the lantern will also throw needful light on the younger Pliny's descriptions of his villas. As for history, does it receive justice in our schools? How many English teachers follow the American practice of making ready, before the year's work begins, a complete outline of the period to be studied, with topical references, lists of maps, and notes on illustrative material? We think but few. How many restrict themselves solely to *English history*?

About Universities. It is not long since we referred to the uncertain character of the Universities of Washington, the American capital, in the district of Columbia. The cause of this lies in the General Incorporation Law enacted by Congress for the District in 1870, which permits any five or more persons to incorporate themselves as a College or a University and as such "to confer upon such persons as may be considered

worthy such academical or honorary degrees as are usually conferred by similar institutions." It is an evil degree of liberty. Proposals are now being made to amend the law or to check abuses of it. Turning to institutions of another kind, we observe that Columbia University, New York, has a Faculty of 962; the University teachers alone are thus numerous enough to form an academy of no mean size. The students enrolled number 16,172—the population of a town. No University in the United States has so large an enrolment, which is twice that which Columbia had not long ago. Johns Hopkins also continues to flourish. This academy has arranged an important course of public lectures in co-operation with the Women's Civic League and the Municipal Art Society of Baltimore. Among the subjects dealt with have been the "The Incoming Alien," "City-planning," and "The Influence of the Press."

Of Journalism. The press is—the press. It is not for us to estimate the literary quality of newspapers in the United States. The Americans themselves are not satisfied with it and are minded to elevate the journalist. At the fifth Annual Meeting of the National Council of Teachers of English—it was held at Chicago—upon the motion of a professor of the University of Michigan, the following resolution was carried:—"That the National Council of Teachers of English approves the movement to raise the academic standard of the profession of journalism, and therefore recommends to secondary-school authorities that no student be encouraged to enter the newspaper profession without further academic training than is afforded by the secondary school." Perhaps our English newspapers are not always beyond the shafts of criticism. If the poet is born, and not made, the journalist needs much making in addition to a birth qualification.

President Wilson. No man is so much talked of to-day as President Wilson. The Johns Hopkins University Circular (No. 10, 1915), "Publications of Members and Graduates in the Fields of History, Political Economy, and Political Science," supplies an authentic outline of his academic and political career, together with a list of his addresses and writings. He was at Davidson College, 1874–5. In 1879 he graduated A.B. at Princeton University; in Law, at the University of Virginia two years later. During 1882–3 he practised law at Atlanta, Georgia; then he became Fellow in History at Johns Hopkins University (1884–5), obtaining the degree of Ph.D. there in 1886. But already in 1885 he had migrated to Bryn Mawr College as Associate Professor of History and Political Economy. There he remained until, in 1888, he was called as Professor of the same subjects to Wesleyan University. Two years later he returned to Princeton as Professor of Jurisprudence and Political Economy, becoming President of the University in 1902. In 1911 he was made Governor of New Jersey, and President of the United States in 1913. Ten American Universities have conferred on him the degree of LL.D. and one (Yale) that of Litt.D. The famous journalist, George Augustus Sala, objected to being called a prolific writer ("It is the epithet, Sir, that you apply to a sow"). We will not, then, lest it should seem discourteous, apply the condemned term to President Wilson. But the catalogue of his publications fills nearly eight pages of the University Circular, and his literary "output" must already exceed that of the late Mr. Gladstone.

FRANCE.

Relations with the United States. M. Ferdinand Buisson, who represented France at the Educational Congress held at the Panama Pacific Expositions, has been struck by the affinity between the American common school and the French *école publique*. Different in form, the two institutions, he says, breathe a common spirit of republican democracy; alike they combine an unceasing appeal to the individual with a continual effort to promote social welfare. He has a plan to make teachers in France and in the United States conscious of fraternity. He suggests that a selection should be made of typical passages from the writings of those who in each country have best represented the national education in its principles, origins, methods, and achievement. Translated, these anthologies would bridge the gap that language and distance cause. The result would be as if thousands of American teachers were to visit the French schools, thousands of French teachers the American. It is stated that the preparation of the American anthology has already been begun.

The Education of Women. If the War has brought sorrow to many women, it has caused woman in general to lift up her head. The work deemed improper or impossible for women is being done successfully by women. New regions of activity, undreamed of careers, are opening out before them.

What is needed is a training that shall equip the girl for the discovered fields, and a demand is being made, not only in University circles, but also by such bodies as the Conseil national des femmes and the Union française pour le suffrage des femmes, for a great reform of the education of women. Mlle Marguerite Clément, in particular, has raised her voice in favour of complete identity in *l'enseignement féminin* and *l'enseignement masculin*. Awaiting mixed *lycées*, such as those which perform their functions admirably in Italy, she would have *lycées* for girls like in all things to those for boys, and with interchangeable staffs. "Away," she cries, "with the old 'good general culture,' which meant ideas, not facts, rose-water mathematics, philosophy for the genteel, and, at the end of it all, a diploma which it was sure that the recipient would never use!" Let us repeat ourselves. The War has proved that Vocationalism is an influence that must affect the education of women no less than the education of men. In so far we agree with Mlle Clément and those who support her.

France seems to be showing, as to gymnastics, a tendency to adopt the *Méthode naturelle* of Lieutenant (de vaisseau) Hébert. It is claimed for the *méthode* that it is *active, libérale, et simple*, reproducing the principal movements of man in ordinary life. It has been adopted, for example, at Reims, where—until a certain convulsion took place—1,600 boys and 1,400 girls were practising it under men and women teachers trained at the Collège d'Athlètes. The time devoted to the exercises, which take place twice a week, is twenty minutes in the preparatory classes, twenty-five minutes in the elementary classes, and thirty minutes in others. Sixty minutes a week for gymnastics we in England should think inadequate, unless there were added an abundance of free play.

UNIVERSITIES AND SCHOOLS.

LONDON.

BEDFORD COLLEGE FOR WOMEN.

The Report of the Council for Session 1914-15 shows that, though the War has deferred some of the proposed extensions of the building operations and increases to the staff, it has not interrupted or seriously affected its present work. The revenue account still shows a deficit of £1,276, due mainly to increased cost of housekeeping and allowances to those absent on War service. No. 20 Dorset Square has been acquired, to rent as a new hostel. The Training Department had an increased entry of post-graduate students, and was, in consequence, able to claim from the Board of Education a grant of £536, compared with £335 in 1913-14. Among the staff absent on War service are Prof. G. Rudler and M. J. J. Champenois. Their place has been temporarily supplied by Mme Champenois, Mme Rudler, Miss Farrer, and Miss F. Page.

OXFORD.

Our numbers are reduced this term to just over five hundred. There are still some men fit for service who are being allowed to take examinations at the end of this term before being called up. The Officers' Training Corps is sending all its members who are over nineteen into the newly formed Cadet battalions, and is to continue only with the few men there may be under nineteen.

Council has proposed decrees amending those which gave the B.A. on certain conditions to those undergraduates who had undertaken military service. The original proposals allowed candidates to supplicate for degrees at the end of the War. That was in the days when we still felt that the War must end soon. Candidates are now to be allowed to take their degrees when they have served the specified time.

Meanwhile we are feeling the Zeppelin menace, and have had to give up our comparatively well lighted streets and quads for Cimmerian darkness. The nightly prowling of the Proctors must be more farcical than ever.

The Board of Finance has issued a statement on the financial position of the University. On the surface it reveals the astonishing fact that the University had in 1915, for the first time for many years, a cash balance, and that a large one of £6,000. That balance has, however, been made up by voluntary contributions from professors and officers of the University of about £6,000; by moneys contributed from various funds, which are really the

savings of past years and will not be available again, of about £8,000; by grants from the Endowment Fund; and from colleges of about £3,000; and by saving from vacant professorships and scholarships of a little over £1,000. These altogether formed an Emergency Account which more than met the real deficit in the year's working of £12,500. Next year the Curators of the Court estimate a further drop in revenue of about £7,000, with a drop in expenditure of only £2,000, so that the deficit to be met will be larger, while the same resources will not exist to meet it. The prospects for 1916 are really serious. The Board do not, however, in the meantime, propose any special measures to meet the situation. Something will certainly have to be done, but whether the University should make a special appeal for help or should borrow, they have not yet decided. Meanwhile, the University is annexing what money it can. The Bampton Lectureship and the Professorship of Poetry have both been suspended this last month.

WALES.

The Central Welsh Board has refused to accept any of the suggestions of its Executive Committee for curtailing the annual examinations next July. The Junior Examination will be held as usual, and no modifications will be made in the two post-senior examinations—the Higher and the Honours Examinations. In spite of all arguments based upon the necessity of economy and the difficulties of the schools due to depletion of staffs, the Board was very much averse to interfering with the normal course of the work in the middle of the year, and, no doubt, there is very much to be said in favour of this attitude, and, besides, the saving effected if the proposals had been adopted would not have been great.

Mr. E. T. John, M.P., was elected as successor to the late Sir John Rhys as member of the Executive Committee. Mr. John is the apostle of Home Rule for Wales, and it will, therefore, be interesting to see how he will comport himself as a member of a committee where, to a certain extent, he will be able to put his principles into practice. Unfortunately, however, for him, the main work of the Executive Committee is of an expert and academic character, of which, probably, he has not had much experience; and, as at present the proportion of academic members is lower than it has been for a long time, it would have been wiser, we think, if a member with a more definite acquaintance with the practical working of the schools had been chosen. Still, he is a man with a wide experience of administrative work, and will no doubt be able to give much valuable help to the Board, especially in standing up for its rights against any encroachments upon them.

At the last meeting of the Cardiganshire Education Committee, the Director of Education presented a report on the closer co-ordination between the elementary and the intermediate schools of the county. Out of 925 children between twelve and thirteen years of age in the county only 112 sat for the Entrance Scholarship Examinations, which was a very unsatisfactory state of things. Principal Roberts agreed that the figures were very disquieting, as they proved a strange lack of appreciation of the advantages of higher education. His remedy was to provide more leaving scholarships from the secondary schools to the Colleges in order that, in the first place, the length of stay at the school may be prolonged, and secondly, that it may be worth while for the parents to make greater sacrifices to keep their children at the schools. Other members thought that the reason for the low proportion was the unwillingness of parents to allow their children to lodge in the towns under no real control. But, whatever the reason may be, it is clear that so far no real advance in higher education has been made in this county, even though it is fortunate enough to have within its borders the University College of Aberystwyth and Lampeter College. The question is to be further investigated.

Principal Griffiths has intimated his desire to resign the Principalship next July, but at the unanimous request of the Council he has consented to retain his office for a further period of two years. He felt that under the present abnormal circumstances he would be failing in his duty if he were to refuse to consent to act. In his report to the county governors he drew attention to the extremely difficult time through which the College was passing. Since the outbreak of War, out of a staff of sixty, twenty-five had already left, and yet there was no diminution in the number of courses required. Of the present students 190 were serving with the Colours, others were in munition works, and altogether a total of 403 had gone from the College. In his references to the Royal Commission, the Prin-

principal stated that this had been accompanied by a promise of increased grants. But there was one serious danger lurking in this Commission, and that was that, by increasing the control of the University over the Colleges, there was every probability that the autonomy of the Colleges would be so seriously impaired that it might lead to the disruption of the University. It was most unusual to appoint a Commission to inquire into the working of a University which was only twenty years old, and especially when the influence of that University had made itself felt so profoundly as that of the University of Wales in the national life of the Principality. He trusted, therefore, that in the forthcoming inquiry this question of local autonomy of the colleges would be kept well in the forefront.

Considerable dissatisfaction exists because the Treasury has put its veto on the proposal to proceed immediately with the Welsh Medical School, and Colonel Bruce Vaughan, at King Edward VII's Hospital, Cardiff, sharply criticized the action of the Government in enforcing delay. The needs of the medical profession were real and urgent, as there would be a serious dearth of properly qualified medical men after the War. Even now that want is keenly felt in Wales, and it is high time that steps were taken to supply it. It is really difficult to understand the position of the Government on this question, because the funds are already practically supplied through the generosity of Sir W. J. Thomas and others, and it is particularly a matter of regret that it has thought fit to take advantage of the movement for establishing a medical school to force on the University a Commission of Inquiry. The two questions of the Commission and of the Medical School are quite distinct, and should not have been incorporated.

As illustrating the keen desire in Wales for a National School of Medicine, an influential meeting was held at Cardiff to consider the position of women as doctors, and to discuss means for facilitating their entrance into the profession. Mr. D. Lleufer Thomas, M.A., and others spoke, and the feeling was strongly in favour of impressing on the Government the danger of delay in proceeding with the establishment of the school.

SCOTLAND.

The General Council has appointed a committee to consider and report on the question of degrees in education, with power to appoint delegates to any conference of the Universities which may be held on this question.

From a report of the Appointments Committee, submitted to the University Court, it appears that the Committee has found places for 423 men in twenty-six different munition factories. Over three hundred of these have been engaged for the duration of the War. Many of them are either unfit for military service or would be exempt from it on account of special circumstances. A considerable number of others, who are now skilled operatives, have been attested and are ready to serve either in an industrial or a military capacity, as the authorities may determine. A part-time hospital service was arranged last summer in the Glasgow Infirmary, and 110 women students and graduates were thus enabled to be trained for work in civil hospitals, in order to release fully trained nurses for military service. A register of the women students and graduates, for purposes of War service, has also been prepared. 407 present students have registered themselves as willing, either with or without previous special training, to undertake the work of educated men withdrawn for military service. Of the 670 women graduates who were registered, most were already occupied, but about a hundred are available for emergency employment at short notice. Mr. William Davidson (Glasgow) has given to the University a sum of money in order to endow a medal in memory of his son, Lieutenant Henry S. Davidson, who was killed in action on May 18, 1915. The medal is to be awarded annually to the student who takes the first place in the O.T.C. Examination for the B Certificate.

The General Council has appointed Colonel Scott Riddell as one of its assessors on the University Court, in room of the late Dr. Westland. The Court has remitted to the Senatus to draw up conditions of appointment and regulations relative to the new Lectureship in Pathology.

The University laments the loss of its Principal and Vice-Chancellor, Sir William Turner, K.C.B., who died on February 15, in his eighty-fourth year, after a short illness. A native of Lancaster and a graduate of London University, he had served Edinburgh Uni-

versity for more than sixty years, as Demonstrator in Anatomy under Goodsir, as Professor of Anatomy for thirty-six years, and as Principal since 1903. He was a brilliant teacher of his subject, and his students have filled most of the Chairs of Anatomy in this country and in the Dominions. He did much to develop the Edinburgh Medical School and to organize and improve medical education generally. For over thirty years he was a member of the General Medical Council, of which he was President from 1905 to 1908. In 1900 he was President of the British Association. Becoming Principal of the University when he was more than seventy years of age, he continued with unabated energy his vigorous and practical service of its interests, and his administrative abilities found full expression in maintaining the strength of the University, both educationally and financially.

Emeritus-Professor Sir William M. Ramsay intended to deliver in February the first course of his Gifford Lectures on "Early Religion and Religious Thought in the Greek and Graeco-Asiatic Lands"; but, owing to his illness, the course has been postponed. Dr. George Macdonald, C.B., is to give six additional lectures on "Scotland in the Roman Period," under the Munro Foundation.

1,971 members of the College are on naval or military service; 41 of these are members of the staff. 1,260 are students, and 662 are former students; 113 have been killed or died on service. The War honours which have been gained include two V.C.'s, one D.S.O., eleven Military Crosses, and five D.C.M.'s. The College is also engaged in much War work, especially in chemistry, in the testing of materials, and in the preliminary instruction of volunteers desiring to engage in shell-making.

By agreement between the Educational Institute, the Secondary Education Association, and the Class Teachers' Federation, draft terms for the proposed union of teachers in Scotland have been prepared. The new union is to be called the Educational Institute of Scotland. Membership is to be restricted to teachers or others professionally engaged in education, who have been recommended by a local association and approved by the Council or by a Committee of the Council, but present members are to have the option of being members of the new association. Provisions are made for the representation of the various classes of teachers on the Council, and for secondary education and class teachers' committees, as well as other general committees. A weekly professional journal is to be established, owned and managed by the Institute, and at least one Sederunt of the Annual Congress of the Institute is to be modelled on the General Meetings of the British Association, with various sections meeting separately.

IRELAND.

At a recent meeting of the Senate of the Queen's University, Belfast, it was reported that commissions had been granted to 455 cadets of the Officers' Training Corps, and that 422 young officers had been trained in the schools of instruction conducted by the officers of the contingent. A resolution was adopted that the Senate should assist in providing suitable literature for the fighting battalions of the Irish regiments at the Front, and a committee was appointed for the purpose.

The Government grants to the Royal Irish Academy of Music and the Irish colleges have been restored. This is a matter for general congratulation, as the dissatisfaction caused by the threatened withdrawal of the grants was by no means confined to any one section of the people. At a meeting of the Conference of Irish Colleges and at the meeting of the Mansion House Conference on the Teaching of Irish, both held on Wednesday, January 26, Mr. Birrell's statements with regard to the grants, made on the previous Monday, were received with lively satisfaction; and the Rev. Denham Osborne, D.D., the leading educational representative of the Irish Presbyterian Church, took occasion shortly after in a public speech to express his disapproval of any reduction of the grant for teaching Irish in primary schools and to uphold the merits of bilingual education. The Dublin Chamber of Commerce, meeting on January 25, also went into the matter of the grants, and Mr. W. M. Murphy, while acknowledging the restitution which had been made in the case of the Irish colleges and the Academy, protested against the reductions of the grants to the National Museum (£2,250), the National Library (£400), the Royal College of Science (£1,000), as well as to afforestation, fisheries development, and the Department of Agriculture—the last economy involving the closing of one of the agricultural colleges—and pointed out that corresponding reductions had not been made for educational work and agriculture in England.

The Annual Meeting of the Classical Association of Ireland was

held in Dublin on the evening of January 28, when the President for 1916, Prof. J. J. Beare, M.A., F.T.C.D., delivered an address on "Plato and Poetry." Mr. Justice Ross presided, and the speakers on the papers were Dr. Bernard (the Archbishop of Dublin), Dr. Mahaffy (the Provost), and Prof. J. F. Dobson (of Bristol University), who represented the English Classical Association.

PRIZE COMPETITIONS.

THE Translation Prize for February is awarded to "Yemen."

The winner of the Translation Prize for January is F. P. B. Shipham, Esq., 19 Westbere Road, Cricklewood, N.W.

Mon petit fils qui n'as encor rien vu,
A ce matin, ton père te salue;
Vien-t-en, vien voir ce monde bien pourvu
D'honneurs et biens qui sont de grant value;
Vien voir la paix en France descendue,
Vien voir François, notre roy et le tien,
Qui a la France ornée et défendue;
Vien voir le monde où y a tant de bien.

Jan, petit Jan, vien voir ce tant beau monde,
Ce ciel d'azur, ces estoiles luisantes,
Ce soleil d'or, cette terre ronde,
Cette ample mer, ces rivières bruyantes,
Ce bel air vaque et ces nuës courantes,
Ces beaux oyseaux qui chantent à plaisir,
Ces poissons frais et ces bestes paissantes;
Vien voir le tout à souhait de désir.

Petit enfant! peux-tu le bien venu
Estre sur terre, où tu n'apportes rien,
Mais où tu viens comme un petit ver nu?
Tu n'as de drap, de linge qui soit tien,
Or ny argent, n'aucun bien terrien;
A père et mère apportes seulement
Peine et soucy, et voilà tout ton bien.
Petit enfant, tu viens bien povrement!

De ton honneur ne veul plus être chiche,
Petit enfant de grand bien jouissant,
Tu viens au monde aussi grand, aussi riche
Comme le roy, et aussi florissant.
Ton héritage est le ciel splendissant;
Tes serviteurs sont les anges sans vice;
Ton trésorier, c'est le Dieu tout-puissant;
Grâce divine est la mère nourrice.

By "YEMEN."

My little son, whose eyes on life unclosed,
On thy birthday thy father greeteth thee.
Come, see the world that hath such goodly shows,
Such wealth, such honours eke of high degree.
How peace on France hath late descended see,
See Francis, who o'er us and thee is king,
And lives his country's pride and shield to be.
Come, see the world, so rich in many a thing.

Jan, little Jan, this goodly world behold—
The bright blue sky, the stars with glittering rays;
See the round earth, the sun that shines like gold,
The brawling streams, the boundless ocean ways,
The void of air, where many a cloudlet strays,
The little birds that as it likes them quire;
The nimble fishes, and the beasts that graze.
Come, see how all's as thou wouldst e'en desire.

O babe, thee welcome shall we dare to term
Upon the earth to which thou bringest nought,
But comest as thou wert a little worm?
Never a weed to wrap thee in, nor aught
Of gold or silver or of gear hast brought.
For father and for mother pain and care,—
'Tis all thou hast to give them,—hast thou wrought.
Poor babe, of worldly substance thou'rt full bare!

Honour to thee will we refuse no more,
O, little child, nor thy great wealth deny.
Of riches and possessions hast such store
Thy fortune with the very kings can vie.
A splendid realm thou hast above the sky,
Thy servitors the sinless angels be,
For treasurer thou hast e'en God most High,
And grace divine, O babe, shall nourish thee.

We classify the 84 translations received as follows:—

First Class.—Fortune le veut, Dane, Lycidas, Beetle, Bia, Cyrano de Bergerac, Berenguela, Yemen.

Second Class.—Miranda, E.H.M., S.M.M., H.F.L., Sweet Lavender, Cactus-thorn, Kimberley, Job, Francis, Ben Edar, Zéolide.

Third Class.—Didaskalos, K.A.W., Coax, P.G.G., Britannia, J.G., E.A.M., Me, Denise, Kym, p.m. Bedford, Jaques, L.W.L., Ebrius, Shepherdess, Marguerite, Chislehurst, Gazeley, Nona, Rastra, Kim, A.A.M., Tweedle-dee, Scientia, Anton.

Fourth Class.—E.S.B., Phil, R. Hayes, E.C.M., York, Ratlos, Samuel, Puck, Bozena, Opaline, Cognac, Nil Desperandum, Winkledust, Elseeaitch, Néarque, M.H., Spero Infestis, F.R.P.

Fifth Class.—M.A.J., Labor, Charles, S.A., Girlie, F.T.A., Quis, Quintin, R.L., Sil, Phin, Ohn, R.I.P., Lunar, Nish, Jan, Quod, P.G., S.P.A., Paramore, Comma, Tweenie.

Fontaine's lyric, familiar to all students of old French poetry, has been introduced to the general reader in the Poet Laureate's anthology. Though it dates back to the sixteenth century, there is but little archaic about it, and the Elizabethans would supply the nearest analogy. It is almost essential to preserve the original system of rimes, and a third class is the highest that a prose version could hope to attain. Few at starting were content with the simple "My little son, who hast nothing seen as yet, Thy father greets thee on this morn." "Jan" or "Jean" is indifferent, but "Jack" is ridiculous. *Rivières bruyantes* is "roaring rivers," not "purling brooks." *Vaque*: "void" is archaic; "void of air with fleeting clouds." "Fresh fish" will not stand; "nimble," "darting," "sportive" is nearer. Why seek to improve on "naked worm"? *Veuil = je veux*. "Queens shall be thy nursing mothers" gives the obvious turn for the last line.

A Prize of Two Guineas is offered for the best translation of the following passage of Zola:—

Brusquement, comme les ingénieurs s'avançaient avec prudence, une suprême convulsion du sol les mit en fuite. Des détonations souterraines éclataient, toute une artillerie monstrueuse canonnant le gouffre. A la surface, les dernières constructions se culbattaient, s'écrasaient. D'abord une sorte de tourbillon emporta les débris du criblage et de la salle de recette. Le bâtiment des chaudières creva ensuite, disparut. Puis, ce fut la tourelle carrée où rôlait la pompe d'épuisement, qui tomba sur la face, ainsi qu'un homme fauché par un boulet. Et l'on vit alors une effrayante chose; on vit la machine, disloquée sur son massif, les membres écartelés, lutter contre la mort; elle marcha, elle détendit sa bielle, son genou de géante, comme pour se lever; mais elle expirait, broyée, engloutie. Seule, la haute cheminée de trente mètres restait debout, secouée, paille à un mât dans l'ouragan. On croyait qu'elle allait s'émietter et voler en poudre, lorsque, tout d'un coup, elle s'enfonça d'un bloc, bue par la terre, fondue ainsi qu'un cerle colossal; et rien ne dépassait, pas même la pointe du paratonnerre. C'était fini; la bête mauvaise, accroupie dans ce creux, gorgée de chair humaine, ne soufflait plus son haleine grosse et longue. Tout entier le Voreux venait de couler à l'abîme.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners will be required to send real names for publication.

All competitions must reach the Office by March 15, addressed "Prize Editor," THE JOURNAL OF EDUCATION, 3 Broadway, Ludgate Hill, E.C.

Those in the First Class are entitled on application to a copy of "Essays, Mock Essays, and Character Sketches."

Translations sent with an addressed and stamped envelope and six penny postage stamps will be returned corrected. Foreign postage stamps are not accepted.

Translations will not be returned unless both these conditions are complied with.

GIRLS' SCHOOL TRANSFERS AND PARTNERSHIPS.

Messrs. GABBITAS, THRING & CO.,

36 SACKVILLE STREET, LONDON, W.,

have a large number of **GIRLS' SCHOOLS** on the books of their Transfer Department, but **ISSUE NO LIST.**

On learning a Purchaser's qualifications and requirements, they will send to her notices of opportunities likely to suit her. The following are examples of the Schools now on their books:—

No. **TRANSFER** or **PARTNERSHIP**. Boarding and Day School of the highest class, in the West End of London. Old-established, and giving a very good return. £800 to £1,000 capital required.

No. **TRANSFER** or **PARTNERSHIP**. High-class Girls' School in healthy Suburb of London. Accommodation for several more Boarders. Very little capital required. Percentage of receipts term by term accepted for goodwill.

No. **TRANSFER** or **PARTNERSHIP** in very well known School of the best class, at a favourite South Coast Resort. Present numbers about 20 Boarders. Accommodation for 40. Magnificent premises. Price for goodwill matter of arrangement.

No. **TRANSFER** of well-established and successful Day School of the highest class, in one of the best parts of **THE WEST END OF LONDON**. Principal retiring for personal reasons. Only £500 Capital required. Part of this might be left over.

No. **TRANSFER** of exceedingly flourishing Boarding and Day School in the Southern Midlands. Gross receipts over £3,000. **NET PROFIT ABOUT £1,000.** 70 Boarders and 50 Day Girls. Very suitable for two ladies to take over in Partnership.

No. **TRANSFER** or **PARTNERSHIP**, with a view to Succession. Very flourishing School for the Daughters of Gentlemen, mainly Day

Girls. 54 Pupils. Gross receipts nearly £1,300. Excellent Premises, in a fashionable residential district in the Home Counties. Only £550 asked for the goodwill. **EXCEEDINGLY GOOD OPENING.**

No. **TRANSFER** of old-established and successful Boarding and Day Private School for gentlemen's daughters, in the West of England. Between 60 and 70 girls, 20 of them Boarders paying up to 54 guineas per annum. **GOOD PREMISES**, standing in 3 acres of grounds. Only £500 required for goodwill.

No. **TRANSFER** of old-established and successful Boarding and Day School in a healthy residential locality near London. 49 girls. Gross receipts for the last year £2,790. Net profit £800. House stands in 4 acres of grounds.

No. **PARTNERSHIP** in one of the best-known Finishing Schools, of the highest class, near London. Between 40 and 50 girls. Fees up to 120 guineas. **MAGNIFICENT PREMISES**, standing in 36 acres. Partner need not invest more than £1,000.

No. **TRANSFER** or **PARTNERSHIP**, with a view to Succession. **SMALL HIGH-CLASS FINISHING SCHOOL**, close to London, in a fine house, with over 3 acres of beautiful Grounds. Accommodation for 24 Boarders; at present contains 10. Suitable for a lady **WISHING TO MOVE**, or with a **GOOD CONNEXION**.

No. **PARTNERSHIP**, suitable for a **WELL QUALIFIED MISTRESS**, in Boarding School at **EXCEPTIONALLY BEAUTIFUL SPOT** on the South Coast. 35 Boarders. Prospectus fees 90 guineas per annum, many paying considerably more. From a well qualified partner, especially with a little general connexion, **LARGE CAPITAL NOT REQUIRED.**

No. **TRANSFER** of old-established and successful Day School and Kindergarten in the **SUBURB OF A SCOTTISH CITY**, giving an **EXCELLENT EDUCATION**, on **MODERN LINES**, containing about 74 Pupils. Prospectus fees 4½ to 21 guineas. Income nearly £1,000 per annum last 3 years.

No. **PARTNERSHIP**, with or without a view to Succession, in exceptionally successful **SCHOOL IN LONDON**, for **BOARDERS ONLY**. **FULL** with 22 Pupils. Prospectus fees £95 to £115 per annum. Gross receipts over £2,100, and Profits over £400, the latter **CONSIDERABLY INCREASING**. Good House and Garden, held on **FAVOURABLE TERMS**. Half-share of Goodwill, £480.

Further information will be sent to applicants, but Messrs. GABBITAS, THRING & Co. will require **full particulars** before arranging introductions to their clients. No charge is made to Purchasers.

These School and Teachers' Advertisements are continued from page 143.

MODERN LANGUAGE MISTRESSES.

French Mistress after Easter for large Girls' Secondary School in Home Counties. Graduate and disciplinarian essential, also experience. Non-res. £140 to £150.—A 51848.

Assistant Mistress after Easter for Girls' High School in North of England to teach French. A knowledge of Phonetics and teaching on the Direct Method essential. German, junior English, and Mathematics a recommendation. Graduate with experience. Non-res. £110 to £140.—A 52070.

Modern Language Mistress with excellent French and German for Easter or September in high-class Boarding and Day School near London. University woman with good qualifications and experience. Res. £120, rising.—A 51993.

MATHEMATICAL AND SCIENCE MISTRESSES.

Assistant Mistress after Easter for high-class Private School in Home Counties, to teach Mathematics and Botany to Matriculation standard. Experience. Res. about £70.—A 51680.

Geography Mistress after Easter for Public High School in the Midlands, to teach Geography throughout the School, with some Needlework in the Middle School. Experience essential. Non-res. £120 to £130.—A 50462.

Science Mistress after Easter for Girls' Public Day School in London, to teach Science and elementary Mathematics. Oxford, Cambridge, or London University woman with experience. Non-res. post with fair salary.—A 51178.

Mathematical Mistress after Easter or September for large Girls' Public Secondary School in North-west of England. Good qualifications and experience. Non-res. £110 to £130, rising to £160.—A 51916.

Mathematical Mistress after Easter for Private Secondary Girls' School in Surrey. Geography on modern lines a recommendation. University woman with training or experience. Non-res. £125 or more.—A 51975.

KINDERGARTEN MISTRESSES.

Mistress to take charge of a small Preparatory Department in High School in North-east of England. Higher N.F.U. Certificate and experience essential. Res. £50 to £60.—A 51571.

Kindergarten Mistress in September for high-class Private School in South Africa, to take charge of Kindergarten and teach French to small children. Res. post with good salary and passage.—A 51549.

Junior Form Mistress, after Easter, for Girls' Public Secondary School in Home Counties. Higher N.F.U. Certificate and training at Froebel Institute essential. Non-res. £90 to £110.—A 52013.

ART MISTRESS.

Art Mistress after Easter for Public Boarding School in London, with Handwork and some other subjects. Good qualifications and experience. Res. £40 to £50.—B 51755.

MUSIC MISTRESSES.

Third Music Mistress after Easter for large high-class Boarding and Day School near London. Pianoforte and Class Singing on modern lines, and conduct orchestra. R.A.M. or Matthey School training. Experienced. Res. £60 to £70.—B 48872.

Music Mistress after Easter for large Public Boarding and Day School in Wales. Pianoforte, Theory, Class Singing, and play and teach American Organ. Good recognized diploma essential. Res. £70 to £80.—B 52002.

Music Mistress after Easter for Public Boarding and Day School on South Coast. Pianoforte (to prepare for L.R.A.M. examination), Solo and Class Singing. Musical appreciation. Res. £70.—B 52099.

GYMNASTICS AND GAMES MISTRESSES.

Physical Training Mistress after Easter for high-class Boarding School in Home Counties. Swedish Gymnastics, Massage, and Games (including Lacrosse). First-rate training essential. Res. £80 to £100.—B 52021.

Gymnastics and Games Mistress after Easter for Wesleyan Public School in Australia. Good Swedish Training essential. Res. £100.—B 51936.

Gymnastics and Games Mistress after Easter for Public Secondary School in Eastern Counties, with Swimming and Dancing. Experienced. Non-res. £100, increasing to £120.—B 51809.

DOMESTIC SCIENCE MISTRESSES.

Domestic Science Mistress in September for Domestic Science Training College in Yorkshire. Cookery, Laundry, Housewifery. First-class Diplomas and good experience essential. Res. £70 to £90 or non-res. £100 to £120.—B 52134.

Domestic Science Mistress after Easter for large high-class Public School near London. Housewifery, Laundry Work, Cookery, with Needlework throughout the School. Res. £50 increasing.—B 52137.

STUDENT-TEACHERS.

Messrs. TRUMAN & KNIGHTLEY always have on their books a large number of Vacancies for **Student-Teachers** on mutual terms or at moderate premiums.

LADY MATRONS AND HOUSE MISTRESSES.

Messrs. TRUMAN & KNIGHTLEY assist qualified **Lady Matrons, Housekeepers, and House Mistresses** to find appointments in Boys' and Girls' Schools.

Ladies desiring further information of any of the above and of other suitable Vacancies should write fully to Messrs. TRUMAN & KNIGHTLEY, stating their age, qualifications, &c., and enclosing copies of their testimonials.

There is no charge for registration. Prospectus, terms, &c., will be forwarded on application.

SCHOOL TRANSFERS & PARTNERSHIPS.

A separate Department, under the personal management of one of the Directors, is devoted entirely to the negotiation of School Transfers and Partnerships.

No charge is made to purchasers.

BLACKIE & SON'S NEW LIST

Experience has proved that Messrs. BLACKIE & SON'S Books take a foremost place by reason of their scholarly editing, clear type, strong binding, and reasonableness in price.

Just Published. Sequel to "Le Livre Rouge."

LE LIVRE BLEU.

A SECOND BOOK OF FRENCH IN COLOURED PICTURES.

By **E. MAGÉE**, Edgbaston High School for Girls, Birmingham.

With Sixteen Full-page Coloured Pictures and many other Illustrations. Demy 8vo. 2s.

The success of *Le Livre Rouge* should ensure a welcome for this sequel by the same author. Planned on the lines of the earlier book, with only such modifications as are suitable to a higher stage, *Le Livre Bleu* recapitulates and supplements the grammatical points, so that it may be used independently by beginners of ten to twelve years.

The coloured illustrations are again an important feature, often serving as the basis of the teaching, and the lessons are further lightened by games and other ingenious devices; while a certain distinction is given to the book by the inclusion of a few very simple examples of contemporary French verse, kindly allowed by the authors.

Rules have been expressed as simply as possible, often merely by signposts, and their amplification is left to the discretion of the teacher. A table of verbs is given at the end of the volume.

LE LIVRE ROUGE.

A First Book of French in Coloured Pictures. By **E. MAGÉE**, Edgbaston High School for Girls, Birmingham. With many full-page Coloured Pictures and other Illustrations. Fcap. 4to, **1s. 6d.**

LE TEXTE EXPLIQUÉ.

Recueil de morceaux choisis des auteurs français, arrangés en groupes selon le sujet traité, avec explications détaillées rédigées en français. Cours Moyen. Selected and edited by **E. J. A. GROVES**, B. ès L., L. ès L., Senior French Master, Bradford Grammar School. Cloth boards, **2s.**

FRENCH VERBS MADE EASY.

A simple and complete exposition of French verbs on practical lines with 56 Graded Exercises by **J. L. THÉODORE-GETZ**, B. ès L. 156 pp. Price **1s. net.**

INTERMEDIATE FRENCH COURSE, PART I, SECTION II.

LOWER GRADE SYNTAX AND COMPOSITION.

By **JAMES M. MOORE**, M.A., and **JOHN SLIGHT**, M.A. Crown 8vo, cloth. Price **1s. net.**

COURS DE FRANÇAIS, d'après les Textes.

By **M. ANCEAU** and **E. MAGÉE**, Edgbaston High School for Girls, Birmingham. Cloth boards, **1s. 6d.**

Introduces pupils of 12 to 14 years of age, who have had one year's teaching by the direct method, to a more systematic knowledge of the necessary grammar.

BLACKIE'S LONGER FRENCH TEXTS.

From Modern French Literature. Printed in large, clear type, with brief Notes, Exercises, Phrase list, and Vocabulary. Fcap. 8vo, **8d.** each.

BLACKIE'S LITTLE FRENCH CLASSICS

Representing all important French Authors from Montaigne to Bourget. Fcap. 8vo, **4d.** each.

PROGRESSIVE FRENCH COMPOSITION.

By **MARIE F. KRASSER** and **LINA MORRISON**, High School, Govan. Cloth boards, **1s.**

Now issued in Parts.

A COURSE OF PHYSICS.

PRACTICAL AND THEORETICAL.

By **CHARLES H. DRAPER**, B.A., D.Sc., Author of "Heat and the Principles of Thermodynamics," "Light, Heat, and Sound," &c. Complete, **4s. 6d.** In Five Parts, price **1s.** each.

ELEMENTARY PHYSICAL SCIENCE. HEAT. MECHANICS. SOUND AND LIGHT. MAGNETISM AND ELECTRICITY.

Also issued in Two Volumes, **2s. 6d.** each.

A JUNIOR CHEMISTRY.

By **W. WILLINGS**, B.Sc., Senior Science Master, Municipal Secondary School, Brighton. Crown 8vo. Price **2s. 6d.**

The object of this book is to provide a course dealing mainly with the experimental facts of Chemistry.

The course covers the syllabuses of the Oxford and Cambridge Junior Local Examinations, and a large number of questions set at these examinations will be found at the end of every chapter. *Just Published.*

LANDMARKS IN ENGLISH INDUSTRIAL HISTORY.

By **G. TOWNSEND WARNER**, M.A., sometime Fellow of Jesus College, Cambridge, Master of the Modern Side in Harrow School. **5s. net.**

ON THE WRITING OF ENGLISH.

By **GEORGE TOWNSEND WARNER**. Price **3s. 6d.** net.

From the Author's Introductory Note.—I have tried to set down briefly the first principles of building up an "Essay": the way to gather and sort material; then to reveal the commonest pitfalls which lie in wait for the beginner, and to put him on his guard against glaring mistakes.

New and Revised Edition.

MAGNETISM AND ELECTRICITY.

Including the Principles of Electrical Measurements.

By **S. S. RICHARDSON**, B.Sc., A.R.C.Sc., Head of the Physics Department, Central Municipal Technical School, Liverpool. **4s. 6d.**

"Mr. Richardson is to be congratulated on the success which has attended his efforts. . . . The book is an admirable one."—*Electrician.*

TILLAGE, TRADE, AND INVENTION. An Outline of Industrial History.

By **GEORGE TOWNSEND WARNER**, M.A. Crown 8vo, cloth. **2s.**

HOW WARS WERE WON:

A Short Study of Napoleon's Times.

By **GEORGE TOWNSEND WARNER**, M.A., sometime Fellow of Jesus College, Cambridge, Master of the Modern Side in Harrow School. With many Maps and Diagrams, some in Colour. Demy 8vo, price **5s.** net.

Prospectuses giving full particulars of above books will be sent post free on application.

BLACKIE & SON, LTD., 50 OLD BAILEY, LONDON.

GLASGOW AND BOMBAY.

Supplement to THE JOURNAL OF EDUCATION.

No. 560.

MARCH 1, 1916.

THE CARSON SMITH MATHEMATICAL SERIES.

By **G. ST. L. CARSON, M.A., M.Sc.**, Reader in Mathematics in the University of Liverpool, formerly Head Mathematical Master in Tonbridge School; and **DAVID EUGENE SMITH, Ph.D., LL.D.**, Professor of Mathematics in Teachers' College, Columbia University.

In examining this series of mathematical textbooks—the first two of which are now published—progressive teachers will admire the way in which Mr. Carson and Dr. Smith have developed the subject, the careful explanation of the various points, the large and varied amount of practical problem material, and the attractive get-up of the books.

ELEMENTS OF ALGEBRA.

Part I. 346 pages. Price **3s. 0d.**

Part II. 214 pages. Price **2s. 6d.**

Parts I & II bound together. 538 pages. Price **4s. 6d.**

The introductory chapters of this book are decidedly novel. The authors proceed upon the assumption that the pupil has a thorough grasp of the elements of arithmetic, and their aim is to generalize this previous knowledge by means of the formula. Great care is devoted to imparting a true conception of the significance of positive and negative quantities. Graphs are treated in a manner which is simple and direct, and emphasis is placed upon the function as the basis of all graphical work. Factors receive a more systematic treatment than usual, and a first course of logarithms, which sufficiently demonstrates their applicability to all forms of practical application, concludes Part I.

In Part II keen mathematicians will note that square and cube roots are dealt with by the correct method of indeterminate coefficients, and that the latest suggestions have been adopted in the development of the theory of variation. The course is continued far enough to cover the syllabus of any final school examinations not intended for specialists in mathematics, and concludes with an essay on the history of Algebra.

A special feature is the practical nature of the problem material, and the choice of illustrations throughout should prevent the subject from appearing dry and uninteresting to the pupil.

PLANE GEOMETRY.

Part I. 266 pages. Price **2s. 6d.**

Part II. 228 pages. Price **2s. 6d.**

Complete. 486 pages. Price **4s. 6d.**

In this Geometry the authors have recognized the impracticability of teaching geometry to the boys and girls of to-day in the form that was suitable for the Greek adult of 300 B.C., but, on the other hand, they have avoided the illogical attitude of modern extremists. They introduce their subject carefully and systematically by means of examples entailing a certain amount of geometrical thinking, and then having paved the way for the purely theoretical work, they reduce the number of formal propositions as far as is consistent with the logical development of the fundamental theory. Each proposition is accompanied by a large variety of exercises and practical illustrations, and the aim of the authors has been to develop in the pupil a facility for the solution of riders.

Part II begins with a very full development of the theory of circles, and due emphasis is placed on the limited definition of the tangent. Many teachers will be interested in the separate book on regular polygons, and for the first time in a school textbook they will find a treatment of maxima and minima in systematic sequence. The requirements of the various public examinations have received due recognition, and the book contains many examination hints and practical suggestions.

BOOKS FOR THE STUDY OF SPANISH.

Elementary Spanish Reader.

Edited, with Vocabulary, by E. S. HARRISON. 16mo, cloth, 79 pages, 2s. 6d.

In this book the earlier selections are so simple that beginners can read them with ease and understanding. There is constant repetition of common words and expressions which makes possible the assignment of long lessons, enabling the pupil to acquire at an early period an extensive vocabulary of everyday Spanish and a knowledge of the structure of the Spanish sentence. All verb forms occurring in the text, whether regular or irregular, are given in the vocabulary.

Spanish Commercial Reader.

Edited, with Notes and Vocabulary, by E. S. HARRISON. 12mo, cloth, 238 pages, 3s. 6d.

The aim of this reader is to enable students of Spanish who desire to use the language in business to become thoroughly familiar with the business forms, terms, and customs of Spanish-speaking countries. The text is divided into three parts: I, Business Stories; II, General Articles; III, Business Forms. The business stories, which are a new feature in texts of this kind, furnish interesting reading material while the pupil is acquiring a commercial vocabulary. They are taken both from Spanish sources and from translations into Spanish of English stories. The general articles deal with the various phases of commercial activity in Spanish-speaking countries.

A Practical Spanish Grammar.

By A. COESTER, Ph.D. 12mo, cloth, 334 pages, 5s. 6d.

This Spanish grammar, with "Practical Introductory Lessons," is written to meet the special difficulties of pupils who are deficient in English Grammar and have studied no other foreign language. The introductory lessons are built around the verb forms, and proceed by a study of the different tenses, introducing at the same time the most important facts concerning nouns, adjectives, and pronouns. The vocabulary includes those terms most necessary for social and commercial intercourse with Spanish-speaking peoples.

Modern Spanish Grammar.

By the late W. I. KNAPP. 12mo, cloth, 458 pages, 6s. 6d.

This book presents clearly and concisely the forms and usages of the present speech of the Castiles. A graded series of English-Spanish exercises and a few reading lessons, with a vocabulary, are included.

Spanish and English Conversation.

By A. E. PINNEY.

First Book. 12mo, cloth, xv+99+xi+111 pages, 3s.

Second Book. 12mo, cloth, xiii+104+ix+107 pages, 3s.

The aim of these books is to teach the spoken language, the words and sentences being those used in everyday intercourse and experience.

Complete descriptive Catalogue of Spanish publications sent on request.

GINN & COMPANY, ST. MARTIN'S STREET, LONDON, W.C.

DUSTLESS ROOMS

On all School, Laboratory, Library, Museum, &c.,
Floors and Linoleums of every description

USE FLORIGENE (Regd.)

During the EASTER VACATION for best results.

It is IMPORTANT TO NOTE that ONE APPLICATION of "Florigene" ALLAYS the DUST and DIRT for 2 to 12 months, according to traffic, not only during each Sweeping (without Sprinkling of any kind), but also throughout all the intervening periods—which is of greater hygienic importance. Easily applied.

These sanitary and labour-saving advantages are NOT attained by sweeping-powders or any other method.

Send for particulars, Medical Reports, and Testimonials, to

The "DUST-ALLAYER" Co.

165 QUEEN VICTORIA STREET, LONDON, E.C.

MESSRS. BELL'S LIST.

A LATIN READER FOR WAR-TIME.

Caesar's Belgian Campaign. Edited by S. E. WINBOLT, M.A. With numerous Illustrations. 1s. 6d. [Bell's Simplified Latin Classics.]

"It was a happy notion to select that portion of the Commentaries that overlaps the ground on which the English forces are now engaged, and to quote for comparison with Caesar a despatch of General French. The illustrations, a notable feature of the series, are excellent."—*The Journal of Education*.

Bell's Shakespeare for Schools. Edited by S. P. B. MAIS, M.A., Assistant Master at Sherborne School. Pott 8vo. With numerous Illustrations from original drawings by BYAM SHAW. 1s. each.

NEW VOLUMES (Now Ready).

**HENRY V. RICHARD III.
ROMEO AND JULIET.**

"The general introduction to this series is full of life and spirit. To catch the Elizabethan spirit and see Shakespeare as he really was seems to be its keynote. There is a valuable chapter on the stage before Shakespeare, and well-selected extracts from Johnson's preface to Shakespeare. Notes, hints, and questions are added, making complete a well-conceived text-book."—*Educational News*.

Essay Writing. A Manual for Students in University Tutorial Classes and the Workers' Educational Association. By B. L. K. HENDERSON, D.Lit., F.R.Hist.S., and ARNOLD FREEMAN, M.A., B.Lit. Fcap. 8vo. 1s. 6d.

This manual is essentially practical in its methods. From cover to cover it is based on actual experience of the difficulties and needs of those who are learning to write essays. No technical terms are used; the style is clear; the advice is practical; and the whole spirit of the book breathes encouragement.

A Military and Imperial History of England. By GEORGE GUEST, B.A., Head Master of St. Paul's School, Bournemouth. 250 pp., with numerous Illustrations. 1s. 6d.

This volume completes Mr. Guest's new course of English History, which comprises "A Social History of England (now in its second edition) and "A Constitutional History of England" (published last year).

PROFESSOR SMITH'S NEW CHEMISTRY.

Elementary Chemistry for Schools.

By ALEXANDER SMITH, B.Sc. (Edin.), Ph.D., F.R.S.E., Professor of Chemistry, Columbia University. Adapted for British Schools by H. A. WOOTTON, M.A., B.Sc., Senior Science Master, Westminster School. Large crown 8vo, with diagrams. 5s. net.

"Many allusions are made to the chemistry of everyday life and to substances which have special importance in trade and industry, and the book is of the type which should be read and mastered by every boy."—*Chemical News*.

A Laboratory Outline of Elementary Chemistry.

By Dr. ALEX. SMITH. Crown 8vo. 2s. net. Companion Volume to the above.

"An excellent course of laboratory work, which the average student will undoubtedly find particularly interesting."—*Chemical News*.

Arithmetic. By F. W. DOBBS, M.A., and H. K. MARSDEN, M.A., Assistant Masters at Eton College. Part I. Price 3s. Now ready. (Part II in the Press.)

[Bell's Mathematical Series.]

Plane Trigonometry. By H. L. REED, M.A., Assistant Mathematical and Science Master, Westminster School. Crown 8vo. 3s. 6d. [Bell's Mathematical Series.]

"The variety of the questions which are taken from human life deserves high praise; it is only by long-continued effort that they could have been collected."—*Nature*.

TEST-PAPERS IN MATHEMATICS FOR SECONDARY SCHOOLS.

For the period of the War these Test-Papers will be issued once a Term (on March 1st, June 1st, and November 1st) instead of monthly as previously.

The March Papers, by JOHN MILNE, M.A., Senior Mathematical Master, Mackie Academy, Stonehaven, N.B., are now ready.

Subscription, 1s. 6d. net per annum, post free (three issues). Single issue, 7d. net. Any one paper can be had for purposes of class distribution at the rate of 1s. 6d. for 25.

G. BELL & SONS, Ltd., London, W.O.

DIRECTORY OF EDUCATIONAL ASSOCIATIONS.

[This List is Copyright. Reproduction is forbidden.]

THE object is stated only when this is not obvious from the title or not known by general repute. Then follow—(a) the membership total, (b) the yearly subscription, (c) the Society's organ, (d) the telegraphic address, (e) the telephone number, (f) the date and place of next annual meeting, (g) the secretary's name and office address.

The following no longer appears in the list—The Burgh and Parochial Schoolmasters' Association, which "ceased to exist December 15, 1915."

As noted last year, we have retained the address of the Charity Commission, in spite of the kindly hint of the Secretary that it "can hardly be called an 'Educational Association.' The jurisdiction of the Commissioners over educational charities was transferred to the Board of Education by the Board of Education Act, 1899, and the Orders in Council made thereunder."

Amongst additions may be noted: The Provisional Committee for the Development of Regional Survey, which is helping "to bridge the gap between the cloister of the school and the daily life of the community," and The Association of Teachers of Speech Training.

Several secretaries are "absent on War service," and the following societies are holding no meetings "during the War":—Association of Teachers of Mathematics for the South-East of England; Allgemeiner Deutscher Sprachverein.

The Board of Education Library is temporarily closed, but requests for books may be addressed to Mr. A. E. Twentyman (see entry). The Union of Private Governesses is waiving its entrance fee during the War. The Stansfeld Trust has suspended for the same period its useful work of issuing reports on Parliamentary Bills affecting women and children.

We have received notice of the death of Mr. H. M'Intosh, late Secretary of the Irish Schoolmasters' Association, but the name of his successor has not yet reached us.

The Federated Associations of London Non-Primary Teachers is dissolved. "The primary objects—formation of a Teachers' Register and the foundation by Government of a superannuation scheme—have been achieved."

We owe our best thanks to Secretaries for their promptitude in correcting slips. No reply came to hand from the Societies marked *.

Aberdeen County Schoolmasters' Association.

80. 1s. To promote interests of secondary education in rural districts. Mr. M. G. Gerrard, M.A., F.E.I.S., Bucksburn.

Academy, The British.

For the promotion of Historical, Philosophical, and Philological Science. Maximum number of Fellows, 100. (f) June or July, Burlington House, London, W. Prof. I. Gollancz, The British Academy, Burlington House, W.

Adult School Union, National.

A Federation of 31 County Unions, comprising nearly 2,000 schools, with over 90,000 members. The movement was started about 1845 by the Society of Friends, but has been for many years undenominational. Its work is education on a religious basis, with social service and recreational activities allied. The movement is democratic, non-party, and unsectarian. (c) *One and All*. Teachers' Training and Registration Society, The.
Training of women teachers for secondary schools and kindergartens. 50. 1 guinea. (e) Willesden 449. (f) May, 1916. Miss D. Penn, Maria Grey Training College, Brondesbury, N.W.

Teachers' Training Syndicate. University of Cambridge.
To promote training of secondary teachers and to issue diplomas to teachers who successfully pass an examination in Theoretical and Practical Efficiency. (e) Cambridge 204. Mr. W. G. Bell, M.A., 2 Warkworth Terrace, Cambridge.

Technical Institutions, Association of.
Consists of two representatives each (usually a member of the controlling body and the principal officer) from most of the technical institutions of Great Britain. 103 Colleges and Schools. £2. 2s. (e) 288. (f) January, 1917, London. Mr. F. Wilkinson, F.G.S., Director, Municipal Technical School, Bolton.

Technical Institutions, Association of Teachers in.
1,250. 7s. 6d. (c) Ten publications per annum. (f) Not yet decided owing to the War. Mr. J. Paley Yorke, 55 Fife Avenue, Upper Clapton, N.

Technical Institutions in Ireland, Association of Principals of.
47. 10s. (e) Kingstown 92. (f) May 31, 1916. Mr. Robert Macdonald, M.A., D.Sc., Municipal Technical Institute, Kingstown.

Tonic Sol-fa College (Incorporated 1875).
Holds Examinations and trains Teachers. 3,700. Mr. Walter Harrison, M.A., Mus.Bac. (Oxon.), 26 Bloomsbury Square, London, W.C.

Training College Association.
430. 2s. 6d. (c) *Journal of Experimental Pedagogy and Training College Record*. Mr. H. E. Griffiths, St. John's College, Battersea, S.W.

Training College Clubs, London Union of.*
Mr. R. A. Williams, 27 Atherfold Road, Stockwell, S.W.

Travel and Educational Association, The International.
To better understand other peoples and tongues. (d) Intertrav London. (e) Gerrard 4426. Mr. Edward Page Gaston, F.R.G.S., 16 Regent Street, S.W.

Trinity College of Music, London.
Also holds Examinations in Music for Teachers' and Local Certificates, and annually offers a large number of scholarships for open competition. (c) *The Academic Gazette*. (d) Musicatus Wesdo, London. (e) Mayfair 627. Mr. Shelley Fisher, 13 Mandeville Place, London, W.

Uncertificated Teachers, National Union of.
Full recognition of and superannuation for uncertificated teachers. Over 2,000. Entrance fee, 2s. 6d.; annual subscription, 2s. 6d. Monthly meetings held at the Houldsworth Hall,

Deansgate, Manchester. (c) *The Schoolmistress*. (f) October, at Manchester. Miss Evelyn E. Walsh, 30 Hilton Crescent, Prestwich, Manchester.

Union of Jewish Women.
To assist educated Jewesses, and to help them to train, to place them, &c. 1,300. From 5s. to £10. 10s. (5s. minimum.) (e) Pad. 352. (f) January or February 1917, in London. Miss Kate Halford, 4 Upper Gloucester Place, N.W.

Universities' Catholic Education Board.
To provide for the spiritual needs of the Catholic undergraduates at Oxford and Cambridge. (f) May 4, Archbishop's House, Westminster. Mr. R. Raikes Bromage, M.A., F.R.G.S., 32 Gledstanes Road, West Kensington, W.

University Extension.
Cambridge Syndicate. (c) *University Extension Bulletin*. (d) Syndicate, Cambridge. (e) 579. Rev. Dr. Ceanage, Syndicate Buildings, Cambridge.

Oxford Delegacy. (c) *University Extension Bulletin*. (d) Extension Delegacy, Oxford. (f) August 1917, Oxford. Mr. J. A. R. Marriott, University Extension Delegacy, Oxford.

Leeds University Extension and Tutorial Classes Committee. The University, Leeds. (d) University, Leeds. (e) Central 2516, Leeds.

Manchester Committee. Mr. H. P. Turner, M.A., LL.B., Victoria University of Manchester.

University Extension Board, University of Liverpool. (e) Royal 4573. Mr. Norman Wyld, Liberty Buildings, School Lane, Liverpool.

University Extension Board of the University of London.
Courses of lectures and classes on Literature, History, Economics, Sociology, Education, Philosophy, Natural Science, Art, and Architecture are arranged at about seventy Centres in different parts of the Metropolitan area. (c) *University Extension Bulletin*. (d) University, Southkens, London. (e) Kensington 7060. Registrar of the Board, Mr. John Lea, M.A., University of London, South Kensington, S.W.

University Extension Guild.
250. 5s. Messrs. A. P. Griffiths and A. Browne, c.o. The Registrar, University Extension Board, University of London, S.W.

University of London Graduates' Association. (Founded 1899.)
To assist graduates to exercise their influence on the work of the University, and to keep the degrees open to all comers on terms of equality and impartiality. 2,000. 1s. or more. (d) Windolite Vic, London. (e) Victoria 244. (f) March 15, at 6.30 p.m., at 25 Victoria Street, S.W. Mr. Alfred S. E. Ackermann, B.Sc. (Engineering), 25 Victoria Street, Westminster, S.W.

University Women, Federation of.
To act as an organization which shall afford opportunity for the expression of united opinion and for concerted action by University women on matters especially affecting them. To encourage independent research work by women. To facilitate intercommunication and co-operation between the women of different Universities. To stimulate the interest of women in municipal and public life. 929 and 422 affiliated. 2s. Miss H. Johnstone, M.A., and Miss E. E. Field, M.A., 11 Hart Street, W.C.

University Women Teachers (Incorporated), Association of.
To protect and improve the status and to further the legitimate professional interests of University women teachers. 2,803. 5s. (d) Communitas Edge, London. (e) Pad. 6183. (f) January 1917. Miss Alice Grüner, 59 Cambridge Street, Hyde Park, W.

Victoria League, The.
To promote a close understanding between the different parts of the British Empire 14,000. (c) *Monthly Notes*. (d) Victrix Vic, London. (e) Victoria 1541. (f) Usually in May, at the Guildhall; uncertain this year. Miss Talbot, 2 Millbank House, Westminster, S.W.

Welsh County Schools Association, The.*
For head masters and head mistresses of Welsh Intermediate and Secondary Schools. 110. 12s. 6d. (c) *The County Schools Review*. (f) October 1915. Mr. D. E. Williams, M.A., The County School, Gowerston, Glamorgan.

Women's Educational Union.
(1) The affording of opportunity for the discussion of all questions bearing on education and on the well being of the child. (2) The improving of the status of women generally. (3) The influencing of outside opinion on these points. 420. 2s. 6d. for full members; 1s. for corresponding members. (c) *Pass it On*. (f) April 8, 1916, at Glasgow. Miss M. Barrowman, M.A., 993 Sauchiehall Street, Glasgow.

Women Teachers, National Federation of.
To collect and express the opinions and wishes of women teachers and to secure their combined action. To secure

equal pay for men and women teachers of the same professional status. To secure better pensions and earlier optional retirement. To secure for women teachers the Parliamentary franchise. Miss Ethel E. Froud, 5 Barnstaple Mansions, Rosebery Avenue, E.C.

Workers' Educational Association.

The Promotion of the Higher Education of Working men and women. 2,409 affiliated societies, 11,083 members, 173 branches. Societies, £1 is. Individuals, 4s. (c) The Highway. (e) City 6052. Central office: Miss Dorothy W. Jones, 14 Red Lion Square, Holborn, W.C. Eastern District: Mr. G. H. Pateman, 14 Red Lion Square, London, W.C. (Absent on War Service.) London District: Mr. H. Goodman, 137 Camberwell Road, S.E. Midland District: Mr. T. W. Price, The University, Edmund Street, Birmingham. North-Eastern District: Mr. J. G. Trevena, 84 Westmorland Road, Newcastle-on-Tyne. North-Western District: Mr. E. J. Hookway, College House, Brunswick Street, Manchester. South-Eastern District: Mr. E. W. Wimple, 14 Red Lion Square, London, W.C. (Absent on War Service.) Secretary *pro tem.*, Mr. H. Sanderson Furniss, 14 Red Lion Square, London, W.C. Welsh District: Hon. Acting Secretary, Mr. Howell James, Cefn Glas, Radyr, Glam. Hon. Secretary, Mr. John Thomas, "Penlan," Ebenezer Street, Trecynon, Aberdare. Western District: Mr. W. R. Straker, 27 Morgan Street, St. Paul's, Bristol. Yorkshire District: Mr. G. H. Thompson, 21 Brudenell Road, Hyde Park, Leeds. Financial: Mr. E. W. Wimple, 14 Red Lion Square, London, W.C. (Absent on War Service.)

Yorkshire Ladies' Council of Education.

Depôt for the sale of work done by poor gentlewomen. Miss Jackson, 7 Cookridge Street, Leeds.

Yorkshire Loan Training Fund.

Raised in 1901 for the purpose of lending fees for training to gentlewomen who must earn their own living. No interest charged. No money lent as capital. Hon. Secretary, Mrs. B. P. Scattergood, The Grange Farm, Far Headingley, Leeds.

ON KEEPING YOUNG AND GROWING OLD.

A TALK TO STUDENT-TEACHERS.*

By CLAUDE G. MONTEFIORE.

I PROPOSE to talk to you this afternoon in a quite informal way, as a friend who may claim the privilege of intimacy in a college which he has known from its foundation. The "young" and "old" of my title are obviously to be understood in a figurative sense. Literally, all of us, if we live, must grow old. Yet, as I hope to show you, there are ways whereby we may both keep young in heart and mind, and grow old in another sense than merely in days. Old age, as the author of the Wisdom of Solomon reminds us, is not merely "that which stands in length of time," nor is its measure merely reckoned "by number of years."

Most of those I see before me are, in the most literal sense, still young. Youth is with them to make or to mar. But I do not propose to speak directly about the right way in which to spend it. There would, indeed, be much to say about work and play; the joys and sorrows of youth; its responsibilities and its limitations. For though many of us look back to our youth as the happiest period of our lives, yet in the perfect, or ideal, life we may rightly hold that each period of it, even old age itself, has its own special satisfactions and achievements, perhaps even its own peculiar joys. And, if youth is rightly used, there is the greater chance of a happy maturity and old age.

Grow old along with me!

The best is yet to be,

The last of life, for which the first was made.

So what I want to speak about is rather the future than the present, less of youth itself than the passing of it into manhood and womanhood.

In a peculiar sense, you who are students in this place are

standing at the parting of the ways. When you leave us, we, who are grey-headed and fairly aged, shall think of you as still very young. But if, in a year or two, you are in the thick of teaching, or if perchance you are married, with a house of your own, you may say, "It seems an age since I was at college"; or even, "I begin to feel ever so old." And, indeed, in a certain sense, the period of youth will be over, the period of womanhood will have begun.

The seven terms of this college life are a sort of prelude, a busy pause, a delightful in-between. Such at least was the college life which I knew myself long ago: one was no longer a boy: one called oneself a man: and yet the strain of real manhood had not quite begun.

To each period of life, as I have said, its own glory. Alas, it is not always so, as we know very well, and one of the objects of this very college is that there may be a larger proportion of glorious childhoods—so far as wise education and admirable educators can secure them. And even to a right and happy childhood, and a right and happy youth, there may not always succeed a right and happy womanhood, or a right and happy old age. Life may be cut off prematurely, or circumstances may prove too hard, or a peculiar individuality may fail to find its proper nurture and environment. But while we admit, and seek to make ourselves prepared for, the shocks and uncertainties of life, there are yet castles in the air which it is right and wise to build ourselves and to encourage others to build likewise. We can, to some extent, make the ideal real—real to us and part of our inner selves. Even what we would *have*, we can sometimes help to procure; still more what we would *be*, we can, to some extent, make ourselves. We have a margin of power; we are, within limits, "captains of our fate." Shall we, then, ask what would we fain be in character, and what powers of heart and mind we would possess, when we are, or if we become, forty or fifty or sixty years old—a long way off, as it must seem, to most of those present here to-day?

The answer to this question is implied by my title. All of us would fain achieve the wisdom of age, and also retain the heart of youth. And one may add at once that, as experience shows, this wish is not impossible of realization. For there are, indeed, radiant souls, both men and women, who possess this desired combination: the wisdom of age and the heart of youth. We may even vary and intensify the phrase, for we may say: the wisdom of age and the heart of a child.

Let us consider a little more closely what we mean by "the heart of youth," "the heart of a child." We are thinking to some extent of the actual child, but more of the child as poetry and romance and even religion have pictured him.

There are many ingredients in our meaning. Some are very deep and solemn things, and some are light and airy things, yet all make the same or very similar demands on those who would acquire them. There is the saying which, to almost all of those here present, comes with the accents of authority, that the very passport or key to the Kingdom of Heaven is to become as a child. Something deep and solemn must here be meant, and the reference is less to any actual child than to the ideal child. And in our list of meanings we should also come down to such apparently simple things as the capacity to enjoy like the child, the capacity to laugh like the child.

"The wisdom of age and the heart of youth." The combination implies a demand. To obtain it means a demand upon us in each direction of our nature, and certainly in three—a physical, an intellectual, and a moral demand.

Just a word as to the physical demand, by which I mean the discipline of the body and the care of health. Let me read to you some sentences of a great teacher upon this subject:

Among the responsibilities of youth which I hardly know whether to call greater or lesser, for it is very great if we consider the consequences and the punishment, but not so great if we think only of the moral fault of neglecting it, is the care of health. It is a duty of which we hardly think, and had better not talk: it is one at which we may sometimes be disposed to laugh. For in youth

* The substance of an address to the students of the Froebel Educational Institute, December 1915.

most of us have health enough and to spare, and we cannot look forward thirty or forty years to a time when the remains of it may have to be husbanded. We do not keep before our minds life as a whole, in which there are many things to be done requiring our whole strength, or remember that there is one condition of success in any business or profession, and that is good health. And in almost every case it is in our own power to secure this.*

I would add to these weighty words the reflection that, though we have all known persons who have triumphed over the weaknesses of the body, and who, in spite of constant ill health, are young in heart and mind, yet ill health—bad digestion, nerves, or whatever it may be—makes it more difficult to remain young or grow wisely old. We are strange combinations of body and mind and soul. And no one can afford to say: "I can neglect my body without detriment to my character or to my mental and moral powers." Overwork and carelessness about food and rest may lead to many evils, both mental and moral: and among these evils may be that, even metaphorically, youth may fly away, and the wisdom of age may not appear. "Work hard, but don't overwork," is the counsel I would offer you, and this, as I shall try to show, is no empty paradox.

I am thinking not so much of your college career as of the many years which I hope are to come after college life is over. For those years I would say, "Be careful not to let the mind rust." Do not be content with the modicum which will get you through your teaching or your household duties. Add, if you can, by effort just a little more. I would not advise people to read what is clearly too difficult for them. One must recognize one's own limitations. We get no profit from a book which is unquestionably beyond us. To be able to make a quotation from Spinoza or Kant or Plato looks learned, but may be a purple patch or worse. But I would advise that, if possible, during the year one should read or re-read (perhaps often only re-read) a book which is quite up to the level of one's own capacities or just a very little bit beyond them. You may remember that in his delightful *Talks to Teachers*, William James lays down the rule: "Keep the faculty of effort alive in you by a little gratuitous exercise every day." On the purely intellectual side, I would not go so far as to say, "every day," but I would, at all events, say: "sometimes," or "occasionally"! It will help to keep you young. And for those who are going to become teachers, I would combine James's maxim with some advice of the great Teacher (in the more general sense of the word) whom I have already quoted.

One good method of keeping young is not to regard one's education—even one's education from books—as finished with one's college career. One may wisely continue, as this high authority recommends, to study from the speculative side the profession in which one is practically engaged. Or, again, we may keep a little time in the vacations either for a subject which, though distinct from, yet connects with, our daily employment, or for one which, perhaps, furnishes the greatest contrast to it.† In one or other of these ways we may seek to keep our minds fresh and strong and keen.

But now let me allude to something deeper and more fundamental—something which affects both our intellectual and our moral life. She, then, who would wish to keep young, and grow wisely old, must retain, and, if possible, increase, her power and her capacity to admire. For admiration keeps us young. It is connected, on the one hand, with pleasure; it is connected, on the other hand, with wonder. And being connected with wonder, it is also connected with the supreme quality of reverence. If you admire, you will almost always feel pleasure in that which you admire. To be able to feel keen pleasure in right and noble things and persons is a mark of wisdom and of youth—of that youth which may be combined with age. It keeps us young to continue to feel pleasure in croquet or chocolate, but far more to be able to admire. Take, for instance, the love for, the pleasure in, and the admiration of, scenery or pictures or music or poetry. Not all of you can, or can

deeply, or can honestly, care for all four of these. Let us suppose you honestly care for two of them. It is of great importance to keep up the power of caring for them by exercising it. If you keep the capacity, you may even increase the degree, and you may, in all probability, be able to increase your judgment and discrimination. It is, therefore, worth while to take a little trouble to seek, or not to neglect, opportunities for maintaining and exercising our power to admire.

Let me here say a word, by way of example, about the care for poetry. I would urge those who can honestly say that they admire and find pleasure in poetry to find time to read some good poetry every month or two months. It need not necessarily be fresh poetry; it may often fitly be the poetry which they have already read. Let them also, if they can, maintain the power of learning a little poetry by heart. If we do not care for poetry when we are twenty, we shall hardly care for it when we are fifty or sixty. And note this. The great poetry which we are able genuinely to care for at twenty, we may, with exercise, continue to care for at fifty. But not all of us may be able at fifty to learn to care for any great poetry which we did not already care for at twenty. Our minds often become less flexible as we grow older: most of us become, in some ways, more conservative. Learn, therefore, to admire some of the immortals when you are young, and if you do not neglect them too utterly, you will retain the capacity to admire them—you will even admire them more deeply, more intelligently—when you are old.

No less important than the retained capacity to admire things is the capacity to admire persons. Youth is said to be the season for hero-worship, but if we want to keep young, that worship must persist all through our lives. And not merely hero worship of the immortals or of public men and women still living, but also hero-worship for some persons whom we ourselves know. The word "hero-worship" may, however, be misleading to some of you. It may suggest something affected, sentimental, or foolish. I do not mean anything of that kind. I mean rather the power to appreciate, to realize, and to admire human greatness and human worth, or even a sweet and gracious, a pure and noble, human personality. I mean the power to feel before the human mind and before human goodness a certain reverence, a certain awe. Youth is, or should be, the age of hero-worship, but it is too often the age of criticism, and, at worst, of cynicism. I would venture to warn you against the dangers of such a temperament. One danger is that it makes you unwisely old. I admit that we may pour forth admiration towards a particular person, and that he or she may turn out unworthy. The shock of discovery may do us harm. But, nevertheless, the risk is worth running. We are very unfortunate if we have not met four or five persons—they may be within our own families, or both within and without them—whose boots we should not think it an honour and a privilege to black. It is quite true that we may sometimes mistake a goose for a swan, and I have admitted that, if we discover our error, the shock may do us harm. But far worse than the error of mistaking a goose for a swan, is the error of mistaking a swan for a goose. That error shows just that lack of capacity within ourselves which prevents us from keeping young and from growing wisely old.

Admiration depends upon two primary qualities: reverence and humility. The conceited person and the person who, whether in man or nature, finds nothing whereat to marvel and show reverence, will soon grow unwisely old. The world has nothing to offer him; how can he keep his heart fresh and keen if that heart has nothing to admire, to reverence, to love? He cannot fill his heart except with self: so filled, it is really empty. And the empty heart grows quickly old. Admiration, on the other hand, keeps the heart employed. It is "a shield and a buckler" against the days of evil and adversity. It maintains buoyancy. It is not only a consolation, but also a stimulus. Admiration makes us believe, in spite of disappointment and sorrow

* Jowett, *College Sermons*, page 141.

† Jowett, *Dialogues of Plato*, Vol. III, page ccxi (Third Edition).

and failure, that beauty and wisdom are realities, that they are among the things which are best worth living for. But above all, admiration makes us believe that righteousness and goodness are realities, both on earth and beyond earth. They, above all else, make life worth living: they, above all else, make us strong and keen in the conviction that it is worth while ourselves, so far as in us lies, to do and to be good. Cheap cynicism and cheap conceit—these are the two vices which, above all other vices, prevent us from keeping wisely young and from growing wisely old.

Connected with the capacity of admiration, but yet distinct from it, is the capacity to feel and to be genuinely interested in ideas, movements, persons. So far as persons are concerned, this capacity to feel interested is allied to the power which we know as sympathy, about which I have no time to speak. But I must say a few words as to the maintenance of interest in movements and ideas. Here, too, for most of us, a certain effort will be needed. First, we shall need it in relation to our own study or business or occupation. What seemed true and good in 1915 may receive several hard knocks in 1930. Or, though still true and good in its measure, it may need supplementing, or even superseding, by something truer and better. Nevertheless, we may prefer to keep to the old routine and the old ideas. To suspect that what we had regarded, and yet regard, as gospel truth is very doubtful, and that the methods we had deemed, and deem, so valuable and adequate are, perhaps, unwise and insufficient, is very painful and disagreeable. Many of us prefer to shut out newer light and to draw down blinds over the windows of our minds. But these blinds will make us dull and sluggish; they will tend to turn us into fossils. There are fossils at thirty, and there can be living and growing organisms at sixty. So let us keep our powers of interest well awake and often used.

Yet to you, to whom this particular fault has not yet come, I must add a warning. There are two opposite evils, both of which we must seek to avoid. It is not well or wise to be moved away from old moorings too rapidly. It is not desirable to be blown about by every new wind of doctrine; immediately to catch on to, and bow down before, every new fad and eccentricity, or even every new theory and method. Formed convictions with a willingness to learn—that is, the ideal, but it is not an easy ideal, whether in education or in theology. St. Paul said, "Prove all things; hold fast that which is good." But this advice or maxim is not within the power of us all. We cannot prove, or taste, or inquire into, or study, all things. We have not the time. One must be willing to make a selection even in one's own subject. And, on the whole, it is wiser to know a few masters and masterpieces in education thoroughly than to attempt a feeble knowledge of many. And one has to remember that a theory or a method may be new—perhaps even it may be the rage—and yet it may be only partially true. One does not keep rightly young by becoming a person who hops rapidly from one fad to another. On the other hand, one must not be afraid of the new, and, above all, not afraid of it because it is *irksome* or unpleasant. One must keep the power alive to appreciate, or even, if necessity arises, to study the startling, the novel, the upsetting. And this power one must try to use and keep alive even in regard to subjects which lie outside one's own particular occupation or profession. For nobody should have no interests except in her own mission or calling; else she is likely to become narrow, obtuse, and wooden. Least of all should a teacher have no other interests than her own craft, not merely because a teacher must be the very last person to be narrow, obtuse, and wooden, but also because education touches so many other subjects. Politics, ethics, history, psychology, philosophy, sociology, and religion—all have their bearing upon education. It is abundantly clear that no one can seriously study, or even read books about, all these vast subjects: few can seriously study, though it would be well for every teacher to have a modest or bowing acquaintance with, some one of them. Yet it is no less clear that we must all form some opinions about political, ethical, and

theological matters: our minds cannot, and should not, be a blank, neither can we keep them in complete suspense, concerning these great subjects. What, then, is to be done? More especially what is to be done so that here, too, so far as our limited powers and opportunities go, we may keep rightly young and grow wisely old? I would suggest that we, at all events, maintain alert the feeling and the conviction that great problems and mighty questions are involved or contained in these subjects, full of interest and complexity. We need by no means suppose that in politics, morals, and religion, everybody is equally right and equally wrong, but I would ask you to combine your own definite and even firmly held opinions with an interested and tolerant mind. New ideas, discordant judgments, may not by any means be necessarily true; nor, on the other hand, because they are agitating or troublesome or uncomfortable, need they be necessarily false. The young in years are by no means always tolerant of the ideas of their elders when these ideas seem narrow and old-fashioned; but the old who are also young may learn a tolerance, or, rather, a certain sympathetic understanding and appreciation, of the ideas of yesterday, and the ideas of to-day, perhaps also of the dawning ideas of to-morrow. And of one subject—the greatest subject of all—I would observe that the wisely old who is also wisely young—she who has the true heart of the child as well as the wisdom of age—will agree with the saying of a great Englishman that it is "a source of calm and repose" (shall we also add, of youth and strength?) "in our religious life always to turn from small things to great, from things far away to things near at hand, from the foolishness of controversy to the truths which are simple and eternal, from man to God."*

Shall we now seek to sum up what we have so far said? How to keep young is one of the ways in which to grow rightly old. We desire to retain the youthful heart and the eager, youthful mind, but also to acquire that large, developed, and wise heart (for there is a wisdom of the heart as well as a wisdom of the head), that stored and sensitive and tolerant mind, which is characteristic of a good old age. Therefore, in the words of the Psalmist (according to the excellent rendering of the Revised Version), we still may pray: "So teach us to number our days that we may get us an heart of wisdom." Perhaps it may be usefully added that this heart of wisdom—this not purely intellectual wisdom—is to be partly obtained by active *doing* as well as by thinking and study. Some practical work, if the stress of teaching or of household cares allow time for it, will be of great advantage to us through all our lives, apart from the help we may thus render to others.

Our instruments, our organs must be rightly used in youth that they become not rusty in age. Keen of heart and mind; not ignorant of evil, but with a still greater conviction of good: such would, and such should, we be.

Once more we ask: How is this ideal to be realized? And, once more, one is bound to reply that to a large extent no words of another can help us. Each must shape her own life: each, alas, must make her own mistakes, each must fashion her own experience. Each of those here present, if she lives and looks back upon her life after forty or fifty years have passed away, will wish that in several things she had acted otherwise; neglected opportunities, wasted or ill spent hours, will crowd upon the memory. Yet to know beforehand that this universal experience will also be ours need not, and should not, discourage us. Though all are bound to fail somewhat, a measure of success is also possible. Thus an attitude of combined seriousness and cheerfulness befits us, as we look forward into the hidden life that lies in front, and awaits us. A good deal is in our power, and of our moral, and to some extent, of our mental, future—if I may so express myself—we have, in some measure, the

* Quoted by Jowett in his great sermon on Baxter as from Baxter's autobiography. I have not been able to find it there. But even if it is Jowett's own, the words "great Englishman" equally apply (*Biographical Sermons*, page 80).

control. If those whom I see before me to-day live till they are sixty, few among them—I hope it is not rude to say this—will be very wise or even exceedingly good. Yet with moderate fortune, it may be within their own power to keep themselves, or to become, alert rather than dull, sympathetic and interested rather than wooden and obtuse, humble and receptive rather than conceited and self-satisfied, helpful and joyous rather than gloomy and apathetic. In the art of keeping young and growing wisely old, the cleverest among you had better not be over confident, but the least clever need have no reason to despair.

THE SPIRIT OF BUSHIDO.

By SEIKEN HONAGA

(Professor of Ethics at the Oriental College of Tokyo).

BUSHIDO, or the Way of Samurai, is better understood by foreigners than it was before our war with Russia, but there are still misconceptions that I will attempt to remove. Bushido is appreciated as the ideal of loyalty and filial piety, but this ideal, it is contended, pushes the patriotism of the nation to extremes, fosters exclusiveness, and produces effects which are dangerous to international relations. It can be shown, however, that this is a prejudiced opinion which would damage the reality of the teaching by means of its forms. Loyalty and filial piety were originally whole-hearted service of a lord or a father. It is a teaching which proceeds from human sincerity and is fluid, not rigid, in its methods of expression. But it can hardly help changing into a bigoted doctrine when it becomes petrified as a teaching applicable to a single nation. It seems to me, however, that the content of the teaching is wide and practical enough to take forms of expression according to any time and place. The Way of Samurai ought to be trodden not only nationally but also individually. The Japanese from remote times have believed in the motto: "Duty is weightier than a mountain, death is lighter than a feather" when circumstances call for heroic acts. This is the same spirit which the "noble army" of Western martyrs have displayed from the time of St. Stephen onwards. And many of them fully believed that, like the acorn of the Pasania, flowing on the mountain stream, they could not rise in this respect to the surface except by losing the body. Such a spirit of sacrifice is not strange to the teaching of Christ who said: "He that loseth his life for my sake shall find it" (Matt. x, 39).

In Bushido, not only loyalty and filial piety, but also valour, fidelity, honour, probity, thrift, dignity, affection, &c., were all appreciated. But the Spirit of Bushido, which runs through or controls these virtues, is really sincerity. Bushido is the unflinching, resolute way of doing duties which originates from this pure sincerity, and its possessor does not hesitate to offer mind and body willingly when occasion actually demands. So Bushido is not precious merely for its revelation of valour, but what is precious is the spirit of sincerity revealed by valour. The following ode expresses well its nature: "So that my whole heart could serve my lord, scarcely should I remember that my body existed."

Bushido rooted itself in the spiritual ground of Japan from ancient times and was cultivated by means of the feudal systems; its teaching is essentially a living one, drawn from the complex and endlessly changing life experience of the warrior. Though it was scientifically elaborated and systematically made authoritative through the profound and long continued peace of the Tokugawa period, yet the models were chiefly the living patterns which warriors stamped on posterity by practice. What is most appreciated is the thoroughgoing *practical efficiency* with which they accomplish what they know to be just and believe to be their duty,

and the *absolute rigidity of principle* with which they adhere to practice even at the cost of life. But the special point which has most value in its application to daily life lies in the practical training to act in the present moment, not relying on the morrow, for they vow to themselves that there is no to-morrow for the spirit. This gives an extraordinary resolution and practical efficiency, not only in war time, but also in peaceful daily life. It is but a shallow judgment which would say rather scornfully that this is merely an eccentric way the Japanese have about such things. The fact remains that brilliant, flowery language is not characteristic of Bushido, which acts on the motto "Don't talk, but act." Some people think Bushido a narrow teaching which was confined to a particular caste in the past; yet it actively survives to-day, being not only the foundation of the spirit of military men in Japan, but also an important element of the national spirit in general.

THE MOTHERS.

I HAVE gotten a little son,
And you have lost one grown;
For now is strength marked out for death
And weakness left alone.
Some see cruelty in my joy
And grudging in your we.
They know the living and the dead,
The soul they do not know.
In our hearts we two
Other truth divine,
For I have wept that child of yours
And you rejoiced in mine.

BY THE HON. LIONEL A. TOLLEMACHE

Author of "Talks with Mr. Gladstone," "Benjamin Jowett: a Personal Memoir," &c.

DUSMO
The Dustless Sweeping Powder

DUST in your SCHOOL is the CARRIER of **DISEASE** which may ATTACK those least able to resist it. You can REMOVE this **DANGER** by the use of **DUSMO** when sweeping.

A line of **DUSMO** laid down and swept before the broom will prevent dust rising, and so dry scour the floor as to render wet scrubbing a quite unnecessary expense.

Copy of Letter recently received 'from a well known College':—
"We have completed a period during which **DUSMO** has been severely tested, and I am now convinced of its efficacy, although I was at first sceptical as to its merits. You will need no better testimonial than the accompanying order for six more bags."

Use DUSMO and effect great economy in your cleaning bill for 1916, and you will also have a **CLEAN BILL OF HEALTH**.

DUSMO Co., Ltd., 11 Queen Victoria St., London, E.C.
Tel. City 7069. Works: Stratford, E.

**THE
BERGMAN ÖSTERBERG
PHYSICAL TRAINING COLLEGE,
DARTFORD HEATH, KENT.**

Trustees:

Sir GEORGE NEWMAN, M.D. (Chairman).
Major WALDORF ASTOR, M.P.
Dr. CHRISTOPHER ADDISON, M.P.
Lord SHAW OF DUNFERMLINE.
The Marchioness of SALISBURY.

Principal:

Miss M. H. MEADE, B.A. (Moral Sciences Tripos).

Vice-Principal:

Miss A. WIKNER (Royal Cent. Inst. of Gymnastics, Stockholm).

The College was opened in 1885, and was the first of its kind in England. Students are prepared to be teachers of Scientific Physical Education on Ling's Swedish System. The Course extends over two years. It includes the study of Anatomy, Physiology, Theory of Education; the Theory and Practice of Gymnastics, Massage and Medical Gymnastics, Dancing and Outdoor Games. Students practise teaching in schools in the neighbourhood. The College stands in its own ground of 15 acres, in a beautiful and healthy locality close to Dartford Heath.

The demand for mistresses of physical training holding the Diploma of this College is at present far in excess of the supply.

The course begins in September. Further particulars may be obtained on application to the SECRETARY.

**BERGMAN ÖSTERBERG
UNION OF TRAINED GYMNASIAC TEACHERS.**

Ling's Swedish System.

Aim of the Union: To advance the cause of Physical Education on scientific lines.

In placing members of this Union as Teachers in Schools, careful and discriminating choice is exercised, and the exact requirements of each School specially considered.—PHYSICAL TRAINING COLLEGE, DARTFORD HEATH, KENT.

SOUTHPORT PHYSICAL TRAINING

Beautifully situated near the Sea in healthy surroundings.

President:

Admiral Lord CHARLES BERESFORD, K.C.B., M.P.

Principals:

A. ALEXANDER, F.R.G.S.; Mrs. ALEXANDER.

The Staff consists of Medical Lecturers and experienced teachers in every branch of Physical Training, including a Swedish Mistress from the Royal Gymnastic Institute, Stockholm.

GIRLS of good education are trained

as scientific teachers of Physical Training to qualify them for appointments as Gymnastics, Games, and Health Mistresses in schools and colleges. The course, extending over two years, includes:—Physiology, Anatomy, School Hygiene, First Aid and Sick Nursing, Remedial Exercises and Massage, Swedish Educational Gymnastics (Ling's System), Outdoor Games (Hockey, Net-Ball, Cricket, Tennis, Badminton, &c.), Dancing (including Old English and Morris Dances), Swimming and Rowing, Organized Recreative Games for School and Play-Ground.

Diplomas and Gold Medals are awarded to successful students.

The demand for capable teachers of Physical Training is steadily increasing, and students of this College frequently obtain appointments before completing their training.

HEALTH STUDENTS.

Cases of spinal curvature or general physical weakness are received in residence, and treated under medical supervision.

**A Series of Practical
OBJECT LESSONS**

on familiar things in daily use, showing how they are manufactured. They include ACTUAL SPECIMENS of the several substances and products in their various stages of progression from the raw material up to the perfected condition for use. The whole series is compiled to illustrate in a practical manner many of the manufactures and productions of Great Britain and her Colonies, and are specially adapted for educational purposes.

**EACH SET OF PROCESS SPECIMENS ON CARDS,
18 by 12, with Teachers' Notes, 2/6,**

as follows:—

BRUSHES, "and how they are made," with explanatory notes, and specimens of bristles, fibre, bass, whisk, cane, the woods, &c., showing the substances in the several stages of manufacture, including a brush partly made, and exhibiting the mode of threading the bristles, &c. ... 2/6

COMBS, "and how they are made," with explanatory notes, and specimens of natural horn, showing the substance in the several stages of manufacture as partly made and completed, and polished comb ready for use ... 2/6

COTTON, "and how it is made," with notes and specimens of native cotton from the pod upwards, in its several conditions of spinning, manufacture, and dyeing, &c., to perfected sewing cotton, ready for use ... 2/6

GLASS, "and how it is made," showing the sand, potash, and other materials of which glass is composed, and specimens of the fused composition in the several stages of melting, &c., up to the perfected substance, with explanatory notes of glass manufacture ... 2/6

LEATHER, "and how it is prepared," with specimens of lamb skin and sheep skin dressed, dyed, tanned, grained, glazed, enamelled, hide tanned for boot soles, with explanatory notes on the several processes of tanning, tawing, currying, &c., by C. W. B. Burdett, Head Master, Leather Trades School, London ... 2/6

PAPER, "and how it is made," with explanatory notes on the art of paper-making, including specimens of wood pulp, hay, straw, esparto, and other vegetable fibre of which paper is made, with 20 samples of the various papers manufactured from the foregoing materials ... 2/6

PENCILS, "and how they are made," with specimens of graphite (or black lead) and cedar wood, showing the grooving, fitting in, polishing, and other processes in the manufacture of a cedar pencil, and explanatory notes ... 2/6

POTTERY, "and how it is made," with specimens of the materials used in its manufacture, including sketches of the pug mill, mixing machines, and potter's wheel; showing the making up of china ware from the crude clay to a perfectly finished plate ready for use. 2/6

RUBBER, "and its manufacture," with sketches made at Kew Gardens showing the methods of collection, the utensils in use, indicating the countries in which it is found and the purposes to which it is put, with samples of natural and prepared rubber, and other specimens ... The set, 2/6

SILK, "and its production," with explanatory notes on the manufacture of the silk from the cocoon to the silk thread, ready for use, with specimens of the same in its various processes of manufacture ... 2/6

SPONGE, "what it is and how it is procured," with 16 samples of native Egyptian, Florida, Cuban, and other sponges, from the Mediterranean, Florida, Gulf of Mexico, and the West Indies, with complete explanatory notes as to what sponge really is, the nature, definition, variety, and uses of the several kinds, with their geographical distribution ... 2/6

WOOL, "and its production," exhibiting its manufacture from the fleece of the sheep, step by step, to the finished yarn, in readiness for knitting, with accompanying notes for teachers' use ... 2/6

ILLUSTRATED CATALOGUE POST FREE.

COX & CO., New Oxford St., London.

- (i), (ii), and (iii) Three **ANDREWS SCHOLARSHIPS** tenable in any one of the Faculties (Arts, Laws, Medical Sciences, Science, Engineering).
- (iv) and (v) A **ROSA MORISON** and a **WEST SCHOLARSHIP**, tenable in the Faculty of Arts only.
- (vi) A **GOLDSMID SCHOLARSHIP** tenable in the Faculty of Science only.
- (vii), (viii), and (ix) A **BUCKNILL SCHOLARSHIP** and two **EXHIBITIONS** tenable in the Faculty of Medical Sciences only.
- (x) A **GOLDSMID SCHOLARSHIP** tenable in the Faculty of Engineering only.

Forms of entry for (i) to (v) must be received on or before May 1st, 1916; those for (vii), (viii), and (ix) must be received on or before July 11th, 1916; those for (x) must be received on or before September 16th, 1916.

Full particulars may be obtained from:—

WALTER W. SETON, M.A., D.Lit.
Secretary

PRIFYSCOL CYMRU. UNIVERSITY OF WALES.

TWO FELLOWSHIPS, each of the

annual value of £125, tenable for two years, are open to graduates of this University. Applications must be received before June 1st, 1916, by the **REGISTRAR**, University Registry, Cathays Park, Cardiff, from whom further information may be obtained.

UNIVERSITY OF MANCHESTER.

A SPECIAL SCHOLARSHIP for a Woman Medical Student (£25 for two years) will be offered for competition next May. For particulars apply to the **REGISTRAR**.

SHERBORNE SCHOOL

AN Examination for ENTRANCE SCHOLARSHIPS, open to Boys under 14 and over 12 on June 13th, 1916, will be held on June 6th and following days. Further information can be obtained from the **HEAD MASTER**, School House, Sherborne, Dorset.

KENSINGTON HIGH SCHOOL (G.P.D.S.T.)

MUSIC TRAINING DEPARTMENT.

Admission in September, January, and May.

THREE SCHOLARSHIPS awarded annually.

For information apply to the **HEAD MISTRESS**, Kensington High School, St. Alban's Road, Kensington.

UNIVERSITY COLLEGE, READING.

HALLS OF RESIDENCE.

Wantage Hall (Men). St. Andrew's Hall (Women). St. Patrick's Hall (Men). Wessex Hall (Women). St. George's Hostel (Women).

THE College provides courses in Letters, Science, Agriculture, Dairying, Horticulture, Fine Art, Handicrafts, Music, Commerce, and Domestic and other Technical Subjects. Students are prepared for London University Degrees and for College and other Diplomas and Certificates.

SCHOLARSHIPS IN ARTS, SCIENCE, AGRICULTURE, FINE ART, AND MUSIC.

An Examination for Major Open Scholarships in Arts (of £65 per annum), in Science (of £69 per annum), and in Agriculture (of £69 per annum), open to men and women, and tenable at the College for two or three years from October, 1916, will be held at the College on June 6 to 9, 1916. Candidates must pass, before September, 1916, the London Matriculation Examination or an examination exempting therefrom, and must be prepared to read for a London Degree in Arts, Science, or Agriculture. Entries must be sent in by May 16, 1916.

A Scholarship in Fine Art, of £30 per annum, open to men and women, and tenable at the College for one or two years, will be offered for competition in June, 1916. Entries must be sent in by June 21, 1916.

An Examination for two or more Scholarships in Music, each of about £26 per annum, open to men and women, and tenable at the College for one, two, or three years, will be held at the College on July 13, 1916. Candidates must offer Singing, Piano-forte, Violin, Viola, Violoncello, or Organ as a principal subject. Entries must be sent in by June 29, 1916.

Further particulars of the above and of other Scholarships and Exhibitions, and prospectuses of the College may be obtained from the **Registrar**, University College, Reading.

FRANCIS H. WRIGHT, Registrar.

GIGGLESWICK SCHOOL.

THREE SCHOLARSHIPS (value £70, £40, and £30) are offered, one to the sons of Officers killed in the War.

For particulars, apply to the **BURSAR**, Giggleswick School, Settle, Yorks.

BEDFORD GRAMMAR SCHOOL.

Head Master: **REGINALD CARTER, M.A.**

EXAMINATIONS for SCHOLARSHIPS and EXHIBITIONS are held annually.

Apply for particulars to **HEAD MASTER**, Bedford.

CHANNING HOUSE HIGH SCHOOL AND BOARDING SCHOOL FOR GIRLS,

HIGHGATE, LONDON, N.

Head Mistress: Miss LILIAN TALBOT, B.A. Honours,
London.

Pupils prepared for Matriculation and Intermediate Examinations of London University. Healthy situation, good playground and garden. Great attention given to physical training. Special terms for daughters of Unitarian Ministers. All inquiries to be addressed to the HEAD MISTRESS.

"As a medium for advertising 'Posts Wanted and Vacant' in private and public schools, *The Journal of Education* fulfils a very useful mission to secondary teachers."—*The Western Daily Press*.

Sea and Mountain Air.

THE CALDER GIRLS' SCHOOL, Seascale, Cumberland.

Unique situation on the North-West coast, where the climate is bracing, sunny, dry, and temperate.

Separate Houses for Senior and Junior Pupils.

The aim of the School is to supply a thorough education at a moderate cost, and to ensure that all the girls' occupations, both work and play, shall tend to the building up of character and the formation of good habits.

A third house, conducted on College lines, is set apart for older girls who wish to specialize in History, Literature, Modern Languages, Music, Drawing, or Domestic Science.

Pupils are encouraged to enter for the Cambridge Higher Local Examination.

Illustrated Prospectus on application to the Head Mistress.

ADVERTISEMENT and other matter for MAY issue should reach the office by April 20th. Urgent Notices of Posts Vacant and Wanted can be received up to April 25th (first post).

A CONFERENCE

FOR ALL INTERESTED IN EDUCATION,
especially Teachers and Social Workers,
WILL BE HELD AT

"THE HAYES," SWANWICK, DERBYSHIRE,
April 25th to 26th.

UNDER THE AUSPICES OF

The Empire Guild of Teachers.
President—Mrs. WOODHOUSE.

The subjects for discussion will be treated under (1) Religion and Vocation, (2) Social Reform through Education.

The speakers will include: Miss Allan, Dr. E. W. Barnes, Miss Burstall, Eustace Charlton, Esq., Miss Irene Cox, Miss Cleghorn, Dr. David, Miss Escott, J. St. George Heath, Esq., Dr. H. T. Hodgkin, Miss M. L. V. Hughes, Miss E. E. C. Jones, Miss Julian, Sir John McClure, Miss Mercier, Miss Robertson, Miss de Sélincourt, G. Shann, Esq., A. L. Smith, Esq., Miss K. Stevens, the Very Rev. T. B. Strong, the Rev. T. Tatlow, the Rev. W. Temple, H. G. Wood, Esq.

OCCASIONAL NOTES.

THE contributions made by classical schoolmasters to the discussion in the *Times* on the claims of science, with one exception, will not do much to help the cause of literary education. Mr. T. E. Page, indeed, recognizes the needs for considering those claims, but he thinks that this is no time for raising controversies. A general, military men say, can always find at least ten good reasons for doing nothing. Two head masters flout the whole subject. Dr. Rouse apparently thinks that nothing matters but classical learning, and it will be no one's fault but his if the public infer that no other subject receives any consideration at the Perse School. The contribution of Mr. A. L. Francis is remarkable for its bad logic. "Philosophic Germany," he says, "won the war of liberation. Scientific Germany has lost the war of ruthless aggression." To attribute a great historical event to one cause only is a crude method of reasoning of which most of us were cured while still at school. Is this the way in which Mr. Francis teaches the sixth form at Blundell's to read history? Then he speaks of the German failure in "the scientific analysis of nations," not seeing, apparently, that the analysis failed just because it was unscientific, being based not on observed facts, but being a series of deductions from premises assumed to be true. Neither of these distinguished head masters appears to recognize that he is as much responsible for the science work of his school as for its classics. Neither makes any attempt to face the problem. We, who are firm believers in a literary

education for the great majority of boys, and in a classical education for a good many, have sometimes to pray to be saved from our friends. Narrowness and bad logic will not help us much.

MR. NOWELL SMITH, of Sherborne, does something to redeem the character of the classical head master. He welcomes science with open arms. He recognizes the "intellectual sluggishness and self-complacency" of the leading classes, and believes the neglect of physical science to be partly responsible for it. He makes a useful practical point when he calls attention to the great expensiveness of scientific training, and invites the scientists to confer with the heads of schools about the scope and character of that training. He recognizes what neither of his brethren do, that there is a problem to be solved. That problem, it may be said, is threefold. The first, and least difficult, question is how to train the large number of chemists, biologists, and other scientific men needed by our manufacturing industries, by agriculture, by medicine, and by our fighting forces. The second—and tougher—question, is how to create in the nation such a sense of the value of science that it will be ready to support liberally scientific institutions and places of research and that manufacturers and Government departments will be eager to secure the services of men trained in such institutions. This is really the essential problem. The proportion of Civil Servants who have had a scientific training is not in itself a matter of the first importance, and, for administrators, history, politics, and language are more valuable than chemistry and physics. And, lastly, there is the question—and this is a question for many teachers other than those who work in laboratories—how to cultivate in all better educated boys and girls the scientific spirit: that is, the desire for exact knowledge and the capacity for exact thought.

THE old tag about a little learning being a dangerous thing is responsible for a vast amount of confused thinking. The truth is that a little learning is a dangerous thing only if you mistake it for much learning, and trade upon it as such. If you recognize the slowness of your little learning, it may be a very valuable thing. It may be a constant reminder to you of how much there is that you do not know, a perpetual suggestion of the oceans of truth which you have never explored. It may at least save you from mental narrowness and the sense of intellectual superiority. It may do more. It may help you to attain to the wisdom of the wise man who knew that he knew nothing. This is the kind of little knowledge of physical science which we want the boy who is trained on the humanities to possess. We want him to do as much work in a laboratory as will make him reverence the work of scientific men, enable him to catch some glimpse of scientific method and scientific truth, and help him to understand the part played by science in human life, and the dependence of human life upon it. What is necessary is not so much that Cabinet Ministers and members of Parliament should know science, as that they should be aware of their own ignorance and helplessness, and be always ready to call in the aid of the expert. Two hours' work a week in a laboratory for three years for every classical boy, if the work were done seriously—a big "if," we fear, in the case of a public school—would go far to produce this spirit.

THE part of the Report of the Committee on Retrenchment in public expenditure which concerns education is not unsatisfactory. The Committee note the feeling in many quarters that economy in education is dangerous and may, in the long run, be unremunerative. They approve the postponement of building and the limitation of repairs. The only other economy suggested is the removal from school of the "under fives," or, more strictly, the "under sixes," for six is suggested as the future normal age for beginning school life. They would like to make an exception in favour of poor districts; but here a difficulty arises, for the Board of Education will not undertake to discriminate, and therefore there could be no grants for the babies anywhere. We hope that some way will be found out of this difficulty. We should not have thought discrimination was so difficult, and before we abolish the "under fives" crèches should be established. The amount brought in by a penny rate would supply the means of judging. Double inspection is less extensive than we had thought; only 49 out of 319 authorities employ inspectors, and in most cases these are administrative, rather than educational, officers. On the other hand, we are surprised to read that the Board's inspecting staff numbers nearly 400.

Committee on Retrenchment.

THERE really seems a chance that research will be recognized at Oxford as a necessary part of the training of a scientist. A statute making "experimental investigations" obligatory for the second part of the examination for Honours in Chemistry has been promulgated, and so far has not roused any opposition amongst the country clergy. "Research," say the supporters of the proposal, "is not a luxury for first-class men; every man who is good enough for a class is capable of it to some extent." No living knowledge of the science, they contend, is possible without some acquaintance with the methods by which new knowledge is acquired, and this acquaintance is needed by the schoolmaster as much as by the men who take up technical work. In England, it might be added, we think too much of the mere acquirement of knowledge. It is popularly supposed that the Germans are the people who fall deepest in that error, but that is not true, for the Germans in their University examinations always demand proof of some original work done by the student, whereas we for the most part ask for nothing but the reproduction of what has been learnt.

Research at Oxford.

THE effect of our national idolatry of games upon intellectual pursuits makes many of us sometimes half inclined to think that it would be better if we had no football or cricket, but trusted to Swedish drill and prisoners' base to develop lung and muscle. Such doubters may be invited to meditate on the tribute which France is paying to our game-playing habits. Mr. Edmund Gosse, writing in the *Edinburgh Review*, tells us that English games have come rapidly into favour on the other side of the Channel during the fifteen years of this century. When the War broke out, he says, there was scarcely a country village which did not possess its football and tennis clubs, while horse-riding and fencing are more practised than in England. The French are beginning to understand that the value of games is by no means purely physical, but that they develop the capacity for initiative and the sentiment of responsibility. Games,

Games.

in fact, give that chance for the play of personal force and character which modern life denies to such a large proportion of men. How much opportunity for initiative or call for strength of will or firmness of purpose is there in the life of a bank clerk or a shopman? The whole tendency of contemporary life is to weaken individuality. As businesses become vaster, and their branches are held more tightly together by improved means of communication, the smaller becomes the responsibility of the separate managers. Human nature revolts against this reduction of the individual to a cog-wheel in a machine, and the cult of games is a sign of this healthy spirit of rebellion.

AN appeal for funds to establish a Chair of Spanish at King's College, London, signed by Sir Maurice de Bunsen, the late Ambassador at the Spanish Court, and a number of distinguished Spanish scholars, has appeared in the press. The sum asked for is £20,000, and Prof. Gollancz is acting as secretary. There is at present only one Professorship of Spanish in the United Kingdom, though some provision for instruction in the language is made at various Universities. We do not suppose that Spanish will ever be widely studied, or that it will take the place of German. But in any nation that claims to be highly educated, there should be students who seek the byways of knowledge, and others who are attracted by the literature and history of nations who have played a much smaller part than Spain in the formation of Europe. The Spaniards can boast of a great literature, albeit not one that is usually reckoned amongst the greatest, and the history of Spain has a special, though melancholy, interest for those who like to study the causes of the decay of nations. And we cannot forget at this moment that Spain was the first country in Europe to make a national resistance to Napoleon. We trust that the needed money will be forthcoming. If every one who has been amused or edified by *Don Quixote* would send Prof. Gollancz a shilling, the amount would be more than reached.

The Study of Spanish.

SIR WILLIAM COLLINS, speaking to the Association of Graduates of the University of London, said that the two cardinal vices of higher education in Germany were the complete control of Universities by the State and the bestowal of degrees by the professors on their own students without independent examination. The State appoints the professor, the professor brands the student, so that the State propagates through the whole University world what doctrine it pleases. About the first of Sir William's points there will be no difference, but some teachers will take another view of his second. In the case of schools, Sir William represents a very healthy public instinct. The system of allowing either professors or schoolmasters to brand their own herrings is open to grave objections. The difficulty of maintaining a general standard, neither too high nor too low, is perhaps the smallest. Far more formidable is the practical impossibility of a man being impartial where his own pupils are concerned. Either he will be over-conscientious, and therefore over-exacting in his demands, or—this would probably be the less frequent case—he would be too tender-hearted, too ready to make excuses—to say that the papers did not represent the candidate's best form, and so forth. Moreover, every teacher has his limitations and his little hobbies; he is more interested in one branch of his subject than in

Branding One's own Herrings.

another, attributes undue importance to some particular capacity, or thinks some knowledge of peculiar value. In any case, he cannot bring to the task of appraising his pupils' abilities the freshness and detachment of the outside examiner. In English Universities, however, the danger is purely imaginary. It has long been an established practice at Oxford and Cambridge that no college tutor who is an examiner in the schools shall during the preceding year read with men who are sitting for that examination; and at Oxford, where there is a *viva voce* examination, it is a distinct disadvantage to a man if one of the examiners is a member of his college.

THE Minister of Education received, on March 27, a deputation from the Committee on the Teaching of Patriotism in Schools, introduced by Lord Sydenham.

Teaching of Patriotism.

Mr. Henderson acknowledged the non-party character of the Committee, but he pointed out that bare justice had been done to the part that his Department had played by their memoranda in the work. The number of teachers who had rallied to the call of their country was sufficient testimony to the effectiveness of the teaching. At the present moment 11,000 teachers were serving, 8,000 more were attested, and 46 per cent. of all the male teachers had joined, or were ready to join, the colours. What our schools need at the present moment is not the spur of patriotism, but the curb of wise discretion.

IN the Oxford scheme, on which we commented last month, the subjects of school study are arranged in four groups—Classics, Modern Studies, Mathematics,

The Oxford Examination.

Science, with thirty subsidiary subjects. The general principle is that the candidate must pass in one group and one subsidiary subject not connected with it. We turn with special interest to the group called Modern Studies, and find that the first subject mentioned is Latin, which language, with English History and Literature and one subsidiary subject (say French Unseen of "moderate difficulty"), constitutes one possible program. We suppose this alternative is meant to appeal to boys and girls who propose to study English at the University, but English scholarship is not required; only a general knowledge of the set books is expected. The French and German set books are prescribed, and questions will be set on the Literature and Social History of a certain period. But why the Social History only? On the whole, the regulations suggest an examination which will be rather slight for young men and women of eighteen; but we must wait to see the papers before pronouncing a final judgment.

LOCAL AUTHORITIES.

THE Committee on retrenchment in the public expenditure has adopted a satisfactory and common-sense attitude towards education. Of the sum of £15,500,000

Retrenchment.

included in the Board's estimate for 1915-16, £12,400,000 finds its way to the Local Authorities. These Authorities, out of their own funds, contribute about £15,000,000, making a total expenditure of over £27,000,000 a year on elementary education. The Committee, after careful consideration, arrived at the conclusion "that a really substantial permanent decrease in this expenditure can only be secured, without a loss of efficiency, by altering the present school ages so as to reduce the number of children in the schools. Fewer pupils mean in the long run fewer

teachers and smaller expenditure on buildings, furniture, stationery, and all maintenance charges. It is not suggested that the leaving age should be lowered, but the Committee think a good case can be made out for excluding children under five years of age except in very poor town areas." There is no doubt whatever that this reform might be effected at once without any educational disadvantage.

IN January 1914 the school registers contained 290,000 children in England and Wales below the age of five, and 900,000 below the age of six. On the Continent

Age of Admission.

generally, we are reminded, the minimum age varies between six and seven, though there are in some cases special schools for younger children, such as the *écoles maternelles* in France. In view of Continental precedents there appears much to be said, reports the Committee, for the permanent introduction of a normal minimum age of six in future (with an option to Local Authorities of allowing earlier admission in very poor town areas), as there can be little doubt that money spent on younger children must in the main be wasted so far as education is concerned. This proposal is one to which effect cannot be given without legislation, and while it has much to commend it, we may take it for granted that it will not be settled on its merits. The Committee recommend that it should be the subject of special inquiry by the Board, "with a view to such action as is thought desirable being taken at the earliest possible opportunity."

THE other recommendations of the Committee concerned with education relate to its administration. Local

Administration.

Authorities for long enough have protested against the constantly increasing elaboration of forms and returns required by the officials of the Board. The Committee remarks: "We have been supplied with specimens of the forms which the Authorities are at present required to fill in and send to the Board for various purposes, and we have been much struck by their number and complexity. We are confident that it would be possible to devise a less elaborate and expensive means of securing that the State gets proper value for its grants, especially as regards the larger and more responsible Authorities." This well founded criticism of the Board's administrative practice will be welcomed and endorsed by all Local Authorities, who will not be surprised to learn that the Board's normal peace-time administrative staff includes nearly 1,000 individuals, in addition to an inspecting staff of nearly 400.

It appears to have been represented to the Retrenchment Committee that there is a large amount of overlapping owing to the fact that inspectors are appointed both by the Board and the Local

Inspection.

Authorities. This is unquestionably the case in several areas where local inspectors have been appointed, and it is also a fact that there is overlapping in the work of the Board's inspectors due very largely to the appointment of women and of so-called specialists. It is, however, a difficult question, and it is not surprising to find the Committee contenting itself with the recommendation that, "in any cases where a clear differentiation of function has not already been definitely arranged, immediate steps should be taken to avoid duplication of expenditure." It is noted that the activities of the Board of Education and the Local Government Board overlap to a considerable extent as regards arrangements for the health of mothers and young children under school age, and that the two departments have found it very difficult to settle a clear line of demarcation between their respective spheres. To remedy this condition of affairs, "which can only lead to disputes and an unnecessary inflation of staff," appropriate recommendations are made.

THE Kent Education Committee, in their report presented to the County Council in February, submitted the following useful resolution:—"That the Board of

Kent.

Education be requested to consider the desirability of making special arrangements, at the earliest possible date, for the admission to training colleges of wounded soldiers of good education, with a view to their being fitted for the teaching profession." There appears to be no reason why this new source of supply should not produce a satisfactory addition to the depleted ranks of qualified teachers.

THE difficulty of effecting economies in school supplies is illustrated in the Kent Committee's report, where it is stated that arrangements for the supply of coal and coke to schools have been completed, the

Cost of Fuel.

average increases of the contract prices compared with last year being as follows:—Household coal, 8s. 3d. a ton; anthracite,

7s. 8d.; coke, 6s. per chaldron. The expenditure, in fact, in the county increased from £6,177 in 1912-13 to £7,708 in 1914-15.

Employment of Children. THE regulations adopted by the Kent Education Committee to control the employment of school children during the present exceptional conditions are commendably definite and stringent. They apply to children not under twelve years of age for the school period beginning on April 1 and ending on October 11. The parent is required to apply, state the nature of the employment, and undertake that the child shall be occupied only under the supervision of the parents or the employer in work suitable to its age and physical condition. The parent is also required to obtain at his own expense a certificate from a duly qualified medical man that the child is physically fit to undertake the proposed employment, and shall also, if required, produce a birth certificate. It is also provided that no child may be employed under the licence for more than 48 hours a week, and the Committee have taken full powers under their regulations to satisfy themselves that all the conditions and safeguards they have imposed are duly observed.

Board's Regulations. THE Board of Education have now issued a series of useful conditions to regulate the exemption from school attendance of children required for the purposes of agriculture. It is suggested that children under twelve years of age should never be excused unless the circumstances are entirely exceptional, and then only for very short periods. Persons desiring to employ children liable to attend school should be asked to furnish particulars of the character of the employment, the wages offered, and the period for which the labour is required. They should also be required to satisfy the Authority that they have made adequate efforts, supported by the offer of reasonable wages, to secure the labour required in other directions, and more particularly by employing women. It is further suggested that the urgency of the need for the labour of children may, to a certain extent, be tested by the amount of the wages offered. That is to say, if the labour of a boy of school age is not worth at least 6s. a week to the farmer, the benefit derived from the boy's employment is not sufficient to compensate for the loss involved by the interruption of the boy's education.

Attendance and Rates. IF the conditions proposed by the Board are strictly carried out, the result of the present demand for the labour of children in agricultural districts will not seriously prejudice their educational interests. Any general relaxation of the regulations under which attendances are secured will, however, considerably affect the grants received by Local Authorities. If there are 50,000 children on the registers, a difference of 1 per cent. in the average attendance represents about £1,000 in the amount of the Government grant, while the cost to the Authority of maintaining the schools remains the same. And, of course, any difference between school expenditure and the Government subsidy can only be derived from one source—viz. the pockets of the rate-payers. As farmers are not, as a rule, willing payers of education rates, it is advisable for this aspect of the school attendance question to be brought to their notice.

Lancashire. IN their thirteenth Annual Report the Education Committee for Lancashire note that, in spite of many reductions in their work, in one direction at least there is cause for satisfaction—viz. in the greater degree to which facilities already provided appear recently to have been appreciated. The returns from secondary schools show that the numbers now in attendance are 460 in excess of those at the corresponding date in 1914. In several schools it is now impossible to admit more pupils without an extension to the buildings. Moreover, in their visits to the various schools, the Committee have been able to note a distinct tendency for both the length of school life and the leaving age to increase. At this time, when the extension of secondary-school accommodation is out of the question, and the need for secondary-school training a matter of national importance, the Board of Education would be well advised to consider a modification of its regulations regarding accommodation. A classroom planned to seat twenty children will easily accommodate twenty-four. A 20 per cent. addition to the secondary-school places now available would be a valuable help to our resources.

THE Board of Education is setting its face against slates. Mr. Herbert Lewis has stated that they would regard their reintroduction as objectionable on both hygienic and educational grounds.

SCIENCE NOTES.

The Place of Science in Schools. CONSIDERABLE discussion has taken place in the columns of our leading newspapers as to the place of science in education, and it is probable that an appeal for compulsory science in Civil Service examinations will have been observed and commented upon by many of our readers. It should be remembered that, although the signatories were chiefly University professors, the appeal originated with the Public Schools Science Masters. We venture to warn the science masters against basing the claims of science to a share in the curriculum for all boys upon examination requirements. Science is one of the greatest achievements of man, probably man's greatest intellectual work during the last century and a-half, and a liberal education cannot therefore omit science if the matter be considered solely on humanistic grounds. The utilitarian plea put forward by the science masters and professors is a sound one also: we are fully alive to the importance and sound basis of the contention that England needs a more widely diffused knowledge of the applications of science. We may even add the third plea that true science is essentially an education of the human mind on lines which correspond with the natural development of inherited instincts under modern environment.

Student or Examinee? WE claim that science should form part of the training of every boy in our public schools, and our claim is based on humanistic, utilitarian, and psychological grounds. The teaching should recognize these as foundational, and examinations should follow the teaching. It would be most unsatisfactory to permit boys to take up physics and chemistry simply to pass an examination—they must be infused with the spirit of the student rather than with that of the examinee.

Academics v. Actuality. ACCORDINGLY we are not greatly charmed with the examination syllabuses for which we are indebted to the Science Teachers' Association. We have no doubt that these syllabuses have been drawn up with much care by science mistresses of experience, and their lack of vision shows the deadening influence of the pedagogic grind. These are hard words; but what are we to say of a course of mechanics which, in dealing with the composition of forces, restricts the number of forces to *two*, and which makes no reference to mechanism or to the measurement of power? Or of a course of optics which stops short before reaching the telescope, microscope, prism binocular, or prismatic compass? Or of a course of electricity which does not extend to the dynamo and motor? Or of pneumatics and heat which tells nothing about pneumatic tyres and pumps, nothing of steam-engines or of internal combustion engines, nothing of refrigeration and liquid air?

Ready-made Syllabuses. IT may be said, in reply to the above strictures, that several of the above topics, although omitted from the examination for age sixteen, are introduced, or may be introduced, into the syllabus for age eighteen. If so, we would observe that only the few will take the higher examination, and it is undesirable that the majority should have a truncated, and therefore ineffective, portion of a scheme devised for the longer course. The root of the mischief is the attempt to prescribe a ready-made syllabus regardless of the individual requirements of each school.

Why not Calcium? THE syllabuses, which include chemistry, botany, zoology, and geology (why not astronomy?), will serve a very useful purpose if they are used as material for discussion at meetings of the Association of Science Teachers. Many questions of a broad character would soon arise and stimulate fruitful debate. Among the details, too, will be found useful opportunities for constructive criticism, of which we will give an instance. Under "Chemistry" we find "Action of Water on Sodium, Magnesium, and Iron." Now, although the shute method of using sodium is safe, the ordinary methods are quite dangerous and have caused accidents. We suggest that calcium be used by the pupils in place of sodium (the teacher can demonstrate with sodium), since its action on water is easily managed. Further, the lessons in chemical composition and substitution gain greatly by use of calcium, as will be recognized by reflecting on the possibilities of the following:—Oxygen, hydrogen, water, carbon, calcium, calcium oxide, carbon dioxide, acetylene, calcium carbonate. Perhaps the use of calcium may have received a check from the difficulty of cutting the metal in the

form in which it was originally supplied by dealers. This is now got over, as the metal is readily obtainable in wire or filings.

THE Report of the Fourth Annual Conference of Educational Associations has just been issued. It contains several articles of interest to science teachers, including the addresses of Sir Oliver Lodge, Mr. Barker North ("Technical Education—The War, and After"), Miss Durham ("Problems of Heredity"), Dr. Gwynne Vaughan ("Bacteria in Warfare"). The paper by Miss Bickersteth and C. Burt on "Mental and Scholastic Tests" contains results of inquiries put into statistical form, and the very interesting result emerges that the highest correlation of ability in school subjects occurs between English composition and science, which subjects also head the list as the best indicators of general intelligence.

ECONOMIES IN EDUCATION.

THE clamour for economies in education appears to us like a demand that a working man with twenty-five shillings a week and half a dozen children should cut down his expenses. For schools and colleges—a few wealthy institutions apart—have nothing but the necessities of life. It has been, and is, a struggle to get even those necessities. For two generations the fight has been going on, with only this much of result, that the best schools in the great towns have reached a fair level of equipment and efficiency, though even in the wealthiest centres great departments of work for children, such as the medical service, manual training, and open-air schools, are just making a humble beginning. The reduction in the size of classes—the very first need of classroom work in elementary schools—has scarcely even made a beginning. Of the scandal of the beggarly salaries paid to teachers from top to bottom of our educational system, in all save our great public schools, there is no need to speak.

What, then, can we give up? By general consent, building comes first, and we are content to let building go. But, even so, it seems necessary to remind our rulers that good school buildings are intended not as a luxury for the teachers, but as a benefit to the children. Space, light, and air, we believe to be morally and intellectually, as well as physically, beneficial, just as every sensible father does when he takes care that his children shall work and play in large airy rooms, and not in poky, ill ventilated cupboards. Oxygen is a great aid both to learning and to virtue. Nor is the inconvenience of a good sized, well arranged schoolhouse a matter to be treated lightly. The London County Council thinks a great deal of inconvenience. If its members were asked why they had continued in War time the construction of their palace on the Thames, they would probably reply that the inconvenience of carrying on their multifarious activities in scattered offices was growing intolerable. They have thought for their own inconvenience, but none for that of their children.

The next economy which seems desirable is that of forms, statistics, and those endless demands for information which are so beloved of bureaucracies and which are tending to turn head masters into clerks. This economy is, indeed, admirable, but that is only because it would be admirable at any time, in peace no less than in war. Your bureaucrats—the goose-quill class (*Federzeug*) as Frederick the Great used to call them—can never understand that it is better to tolerate a few mistakes than to spoil a good teacher by making him drive a pen for half the day. Perfect correctness in trifles is, in their eyes, the highest pitch of excellence to which man can attain.

Then there is inspection—the double system of inspection, which seems to be necessitated by the refusal of any authority to accept the opinion of any other authority's expert. Here economy is difficult at any particular moment, as it would be impossible to dismiss half the inspectors, and we suppose that it would be too audacious to suggest that, say, 30 per cent., or those who have never taught in a school, should be put to learn their business by taking the place in

the classrooms of teachers who have enlisted. It might even do the old hands good to refresh their memory of school difficulties by taking a turn at the blackboard. Perhaps Dr. Hayward will think about it; it is a favourite idea of his. True, the saving would be a fleabite, but then the Prime Minister tells us that we must not despise fleabites.

It is noticeable that we do not hear much about economies in administration. Possibly our Authorities are doing good by stealth, but we should feel happier if we knew more about it. We fancy there is a good deal of printing of reports, minutes, and so forth, which might well be spared. It would be inconvenient, we shall be told. Just so; anybody may be inconvenienced except councils and committees.

On the employment of inefficient teachers we need waste no words. You cannot "dilute" skilled labour with unskilled in a school as in a munition factory, because all the work demands the highest skill. To further diminish the already inadequate supply of scholarships would be merely to cut down the brains of the next generation, and our governing classes have not shown themselves in this War so liberally endowed with brain-power that we can afford to lose any chance of tapping a new source. The closing of small village schools we call a more respectable expedient. Provided the children have proper opportunities of attending school elsewhere, we see little harm in this device for saving. The abridgment of the school period at the upper end is meant to help the labour rather than the financial problem, but if the release of children goes on increasing at the present rate it will probably render a proportion of the village teachers unnecessary. There is, no doubt, something to be said for letting boys go on to the farms at twelve, for labour is growing scarce in places and we do not believe that any large number of town-bred women will prove competent to do farm work. But Warwickshire, Worcestershire, and other counties are now letting children leave school at eleven. This is too low, and we are glad to note that Mr. Henderson has his eye on the matter. Finally, infants, at least in the better class districts, might perhaps be encouraged to begin their educational career at five instead of three years of age.

The policy of the Education Authorities would appear less mean if we were really at our wit's end for money. But, so far from that, we are, a few hard-hit classes apart, rolling in wealth. Indulgence in every kind of luxury and amusement seems increasing rather than diminishing. Theatres, cinemas, and public-houses never attracted larger crowds. Motor-cars are as numerous as ever, furs and fine dress have become a public scandal, travelling is unchecked, and London hotel and restaurant life goes on merrily. We have plenty of money to spend on eating and drinking and amusing ourselves, but little to spare for our children. Had we not better leave off calling the Germans barbarians?

THE OXFORD SUMMER MEETING OF 1915 AND SOME REFLECTIONS.

By a HEAD MASTER.

IT seems a little out of season in these dark days of winter to discourse about a summer meeting of last year, especially to readers hardly recovered from the riot of Christmas conferences; but the Oxford meeting furnishes me with a better text for a homily, perhaps not unneeded even now. It was held at a time when the minds of most men were absorbed in interests apparently far more vital and pressing than the story of ancient Greek civilization, and a debt of gratitude is due to the Oxford Extension Delegacy for their courage in inviting students to Oxford at all. Yet the promoters were justified for their wisdom and their daring. Naturally there was some falling off in numbers, but well over five hundred students attended. Most of them, of course, were women, but there was a fair sprinkling of men—men of all ages, all sorts, and all conditions.

It was an oddly assorted gathering, and we who made it up went, I suppose, for various reasons. To speak for myself, I went not only that the reservoirs which had run low during a long and difficult term might be filled and freshened, but more particularly for the healing of my soul and in order to forget, if possible, for some little while and in some slight measure, the terrible business with which the civilized world was occupied.

Asphyxiating gases and high explosives had got on my nerves and some remedy had to be sought, and in the picturesque courts and the old-world gardens of Oxford one hoped that the spirit of beauty, frightened by the din of contending armies, might yet be found in a last refuge on earth. And though, of course, the hope was a delusion, and though the echoes of the War were loud enough in Oxford, yet there is no doubt that some of us did come away refreshed greatly in spirit and with more hope and confidence in the higher things and the nobler achievements of life. One learnt to see the War, if not *sub specie aeternitatis*, yet at any rate as an historical episode—terrible and almost unprecedented, it is true, yet still as falling into its place among, if greater than, the fierce struggles of antiquity. The arrangements for the comfort and convenience of the students were, as always at the summer meetings, admirable. The usual congress rooms at the examination schools were unavailable, but there was more than compensation for this through the gracious generosity of the Dean and students of Christ Church who placed their stately and spacious hall at the disposal of the Extension Authorities.

Some of us renewed our undergraduate life by inhabiting college rooms once more and once more enjoyed the happy feelings of youth and freedom and supreme indifference to comfort. But it was, of course, the lectures that counted for everything, and here we were particularly fortunate. After a fairly long experience, both of attending and delivering lectures, I can truthfully say that I have never heard a better all-round series. How often the most learned and able men are the dulllest of lecturers! Those who are really masters of their subjects are often the least capable of expounding them. But there was nothing of this kind at Oxford last August. The organizing ability of Mr. J. A. R. Marriott had brought together a wonderful team. We had the Regius Professor of Greek at his best, and what could be better than that? Full of deep learning and not without a pleasant humour, his lectures were delivered with a sure artistic finish, and illustrated in a convincing concrete fashion the best qualities of the nation whose genius he was expounding. The sense of proportion, the *μηδὲν ἀγάν*, the delicate subtlety of thought, the grace and beauty of Hellas were excellently portrayed. And let it be said that the great merit of Prof. Gilbert Murray's lectures, as of most of the others, was that they were stimulative, provocative even, daring sometimes, never mere fact-giving. It is possible that some of the students—particularly perhaps some of those women whose presence at these meetings is always a strange problem—were lulled into a beautiful but ineffective and delusive dream of scholarship by the rhythmic utterance and pleasant phrasing of the lecturer, but to most the words were a challenge to labour and research rather than an invitation to indolent acceptance and secondhand scholarship.

It is invidious to particularize lecturers, but I cannot refrain from expressing my deep appreciation of Mr. Temple on "Plato," Dr. Wicksteed on "The Greek Dramatists," the Master of University on "Ancient History," and the Principal of Exeter on "The Greek Mysteries." All gave of their best and we felt with deep thanksgiving that English classical scholarship need not fear to challenge comparison with that of any other country. And perhaps the predominant feeling that remained in one's mind was regret for past opportunities missed and a determination not to neglect them again. And then came the wonder that no masters from the bigger public schools—the very homes and shrines of classical teaching—were present. There was a goodly number of women teachers, but I believe the number of men

absolutely engaged as schoolmasters was exactly one. Of course, one hastens to add that there were first-rate excuses on this occasion. No doubt very many were engaged on War work of some kind or description. But, unfortunately, the case is usually the same at all these meetings. And that gave rise to the reflections which make up the second part of this paper. Is the accusation, so often put forward, a true one that schoolmasters do not take their profession seriously enough? And not only this experience, but much corroborative testimony, has convinced me that the indictment is justified.

Very few schoolmasters—especially in the so-called public schools—are really keen enough on their profession. Why is this? Women teachers do not suffer in this respect. They are usually enthusiastic enough, particularly in their earlier years—sometimes perhaps too keen and too conscientious—to the detriment of their own health. But they certainly put men to shame. And this fact is really a most serious one and counts for very much that is wrong in our educational standard. Of course, we have the regular stock excuse. Teaching is an exacting profession, and during the holidays the teacher must recuperate his jaded energies and recharge his exhausted nerve-cells by rest, by sport, by travel. There is, of course, some truth in this, but not very much. One feels that the only justification for the long holidays is the opportunity for gaining knowledge and undertaking research. Besides, is the brain so often seriously overtaxed during the term? No doubt the continual presence of young people is a drain on the vital powers. But in their absence fresh stores may well be laid in. And now that we are hearing, more constantly than ever, exhortations to reform and amendment, it is well to take thought and consider. Prominent men of the day—without much real understanding of the problem, it is true—preach the same lesson from the public platform, and the press is always with us (or, perhaps, more often against us). The air resounds with warnings to prepare for the bad time coming.

We schoolmasters are denounced for many sins, and that we are guilty of some I should be the first to admit. But it is usually the sins of others for which we are castigated. The people as a whole are responsible for the comparative failure of our education, and they love to have it so. And why? Because they will not realize, and none of their leaders will tell them, that the problem of education is in one sense ridiculously simple, though in another overwhelmingly difficult. For the problem of education is just the problem of the teacher. It has been said before, but it needs repeating and emphasizing till even the dull ears of our politicians give heed. Given the teacher, all other difficulties will disappear. Questions of the subjects taught matter very little; what does matter is the way they are taught. Hours of teaching are important: yes, but how they are employed is more important still. Problems of homework, discipline, health, physical training will all be solved or will solve themselves if you get the right teacher. To parody Plato's famous statement, all the systems of education fondly and cunningly devised by experts or others will fail, and fail hopelessly, until the educators become philosophers or philosophers become educators. In vain the infinite labours of the Board of Education will work out an intricate and wonderful system of examinations. In vain will you add inspector to inspector and director of education to education director and create councils and committees *ad infinitum* and *ad nauseam*. In vain you employ clerks by the thousand and consume stationery by the ton. You are not an inch nearer the solution of the problems than you were before. Indeed, you are much farther away. You have come to believe that statistics are education; you have invented the most expensive and the most complicated machinery; you have drawn up the most delightful syllabuses; you have issued the most admirable pamphlets and the most wonderful circulars; you have created a staff of most courteous and charming but absolutely futile officials, and you had better begin afresh by scrapping the whole lot.

What is the use of this fearful and wonderful system if

you have no teacher? When will the authorities, when will the country, see this? What is the great indictment against the Board of Education and the so-called statesmen responsible for it? It is that they have begun at the wrong end. All their work may be laborious and is no doubt showy enough, but we could have worried along without it until the teaching profession was made attractive enough to tempt the best brains into it. And by "attractive" I do not mean entirely from the monetary point of view. However, we need not stop to consider what attractions are necessary. They have often been stated before and will leap to the mind of every thinking person. Enough that a cunning examination system and learned and laborious documents from the Board are not among them.

Obviously, the first step is to appoint as President of the Board of Education the ablest man in the country, and give him at least a year to consider the question. The rest will follow. Then we may get some approximation to a real system—a system that does not regard the teaching of a multiplicity of subjects or the amassing of innumerable facts or the passing of examinations as the end or ideal of education, but the enthusiasm for learning, the desire to know, not in seeming but in reality—the ambition to become, if not the spectator of all time and all existence, at any rate a wise and truthful and earnest seeker after the eternal verities of life.

JOTTINGS.

DIRECTORY OF EDUCATIONAL ASSOCIATIONS: CORRECTIONS.—The Secretary of the Schoolmasters' Association (Ireland) is Mr. J. Thompson, M.A., The High School, Dublin. Dante Society.—Chevalier Ricci is dead. The new Secretary is Mr. Henry Cart de Lafontaine. The Annual Meeting will be held in June at 38 Conduit Street, W. Genealogical and Biographical Society.—Prof. Ricci was also Secretary of this. The name of his successor has not reached us. Head Mistresses' Association.—The address and telephone number were changed on March 20 to 92 Victoria Street, Westminster, and Victoria 2887.

MR. WILLIAM EDWARDS, M.A., Head Master of Heath Grammar School, Halifax, has been appointed Head Master of Bradford Grammar School. Miss K. Jex-Blake, who has been a Lecturer at Girton College since 1885, and Vice-Mistress since 1903, has been appointed to the headship of the College.

ELSTOW SCHOOL, Bedford, formerly Bedford County School, now a private property, has been closed.

ROLL OF HONOUR.—Captain and Adjutant R. P. Dunn-Pattison, 6th Devon Regiment, sometime Lecturer on Modern History at Magdalen College, Oxford, and Captain G. C. Watson, of the same regiment, Assistant Master at Colston's School, Bristol, have been killed in Mesopotamia; Major Edward Freeman, 10th Royal Welsh Fusiliers, grandson of Prof. Freeman, and Captain Arnold Burrows, 6th Northamptonshire Regiment, Assistant Masters at Mercers' School, E.C., in France; Captain E. R. L. Hollins, 9th (attached 8th) Lancaster Regiment, Assistant Master at The Grange, Wimborne; also Lieutenant R. T. M. Lias, 9th Sussex Regiment, Senior Scholar of Trinity College, Cambridge, and Master at Victoria College, Alexandria.

The Guild of Cheltenham Ladies' College made a gift to the Army Medical Service of an X-ray apparatus for use in the field, and recently learnt that it was used on the King after his severe accident in France. The Guild also maintains a hospital in Cheltenham.

The *Schoolmaster* states that there are 11,400 men teachers serving with the Forces, and about 9,000 have attested. There are 236 women serving as nurses. Of the men, 232 have been killed.

In Scotland, Mr. McKinnon Wood tells us, the teachers who have enlisted or attested number 2,275 out of 3,736 of military age.

MR. ALGERNON LATTER, M.A., Master of the Junior School at King's College, Canterbury, has been appointed Head Master.

"I STROVE WITH NONE" (LANDOR).

Ambitione procul, famae securus inanis,
Ruris amans vixi, totus in arte mea.
Sic genio indulsi calida fervente juventa.
Labitur in cineres fax, abeoque libens.

F. S.

MR. SPENSER WILKINSON has reissued, under the title of *The Nation's Servants* (Constable, 6d. net), three essays published in 1903. He finds nothing to modify by reason of the War, and still holds that the Army will take from the public schools not the best boys, but the second best. The reform to be pressed for is, therefore, to improve the education given to the ordinary boy at a public school.

THE Teachers' Guild Council have arranged for a Conference on Educational Reform, to be held at 9 Brunswick Square on the 14th inst., at 3 p.m. The chair will be taken by Sir Henry Miers, and specialists in all branches of education have consented to attend. The problems to be discussed include the reform in curricula, examination and inspection, training and supply of teachers, extension of educational facilities for all after the age of fourteen, and other reforms which the War has shown to be indispensable.

DR. H. J. SPENSER, acting on medical advice, has resigned the head mastership of University College School, Hampstead, in which post he succeeded Mr. Paton in 1903. Dr. Spenser took a First in the Classical Tripos of 1888. He had recently been appointed Rector of the High School, Glasgow, when he was elected to the present head mastership, and it was under him that the school was removed from Gower Street, and has increased its activities and numbers in its new quarters.

THE REV. ST. J. BASIL WYNNE WILLSON has been appointed to the Deanery of Bristol. Canon Wynne Willson succeeded Mr. Fletcher as Master of Marlborough College in 1911. Previously he was Assistant Master at Rugby, and for six years Head Master of Haileybury College in succession to Dr. Lyttelton.

MR. C. LOWRY and **MR. W. W. VAUGHAN** as representing the Conference and Associations of Head Masters, appeal through the press to the governing bodies of schools not to overlook, in appointing to head masterships, the claims of assistant masters who are engaged in fighting for their country. Some recent appointments tend to show that the warning is not uncalled for.

MESSRS. VICKERS (Limited) are endowing a Lectureship in Russian at Sheffield University.

A SERVICE of Intercession for Teachers will be held at St. Paul's on the evening of Ascension Day, June 1, at 6 p.m. The preacher will be Canon Nairne. Teachers willing to help with the singing are requested to write to Mr. Alan May, 31 Bonham Road, Brixton Hill, S.W.

PROF. W. A. KNIGHT, who died last month in his eighty-first year, was best known to the public of to-day as the historiographer of Wordsworth, whose complete works and life, in eleven volumes, he edited in 1881-9, but to an earlier generation he was familiar as Professor of Moral Philosophy in the University of St. Andrews, the advocate of the since discredited L.L.A. degree, a voluminous editor of popular volumes on philosophy, and a lecturer. For his literary work he was granted a Civil List Pension, and enjoyed a well earned repose in his home at Greta Lodge, Keswick. His memory is recalled by Prof. Harper's new *Life of Wordsworth*, just published by John Murray (2 vols., 24s. net), which we shall review next month. Prof. Harper, of Princeton University, has devoted many years of research to the work, and has been able to reveal an unsuspected *liaison* of Wordsworth's early life in France, which to the poet's first biographer, the Bishop Nephew, and to Prof. Knight, was a sealed page.

In the many full and appreciative obituaries of Mr. Stopford Brooke we have seen no reference to his connexion with the College for Working Women in Queen Square, of which he was the last President. After a long career under its capable Principal, Miss Gould, and the devoted labours of teachers and amateurs, such as Mr. Ebenezer Cooke, Lady Colvin, and Mr. W. Marshall, the College collapsed for lack of financial support, and Mr. Brooke failed to enlist the sympathies of his congregation. It has been

said, with some justice, that for Mr. Stopford Brooke's theology we must consult his literary works, and for his poetics his sermons. He first made a name as a preacher, and later found his true vocation as an interpreter of English poetry. He combined in a rare degree profound knowledge and critical appreciation. To many of us his studies of Tennyson and Browning came as a new revelation, and his *Primer of English Literature*, which dates back to 1876, is still the best book of its kind.

MR. JOHN CLAY, whose death took place on March 20, was for nearly thirty-five years Printer of the Cambridge University Press, having joined his father, C. J. Clay, as partner while still an undergraduate. He sat on the Town Council for many years as a University representative, and was justly proud of the fact that two-thirds of the Pitt Press employes were serving with the colours.

MR. W. M. HUGHES, Prime Minister of Australia, has paid a visit to the Burdett-Coutts Schools, Westminster, where he spent eight years as pupil and pupil-teacher. In his speech to the children he recalled the visits of Matthew Arnold as the only bright spot in the darkness, when payment by results was in vogue.

A CONFERENCE for teachers and social workers will be held at "The Hayes," Swanwick, Derbyshire, from April 25 to 29, under the auspices of the Empire Guild of Teachers.

To the vacant head mastership of Colchester Royal Grammar School Mr. H. J. Cape, Head Master of the Rochester Mathematical School, has been appointed. Of the 97 candidates, no fewer than 41 were already head masters of secondary schools. Mr. Shaw Jeffrey will continue in office till the summer holidays.

THE Secretary of the Maria Grey Training College desires us to correct as follows a paragraph in our last issue: "Of the seventeen students who presented themselves for examination in proficiency in teaching in June last, sixteen were successful, one obtaining First Class Honours; those who entered in December were also successful. Ten students entered for the Final Examination of the National Froebel Union; all passed, four obtaining First Class Certificates."

IN the evening schools of the London County Council there are 4,343 students of French. The adherents of German, Spanish, Russian, and Italian together muster 963. These are not healthy figures. The demand for the four latter languages ought to be a good deal more than one-fifth of the demand for French.

MR. C. H. TREMLETT, B.A., Assistant Master at Fettes School, has been appointed Head Master of the King's School, Bruton.

It may not be generally known how small is the provision in our Universities for the teaching of any languages other than French and German. Neither at Oxford nor at Cambridge is there a Chair of Spanish, Italian, or any other modern European language. London possesses a Professor of Italian and a Professor of Russian; Liverpool has established Chairs of Spanish and Russian, and here and there may be found lecturers in lieu of professors. But the whole provision in England for teaching modern languages is hardly equal to that of Berlin alone, where, according to Prof. Gilbert Waterhouse (see his recent letter to the *Times Educational Supplement*) there were, in 1910-11, 148 courses of lectures, each term dealing with 31 modern languages. The accumulated teaching power of all the English Universities might perhaps be equal to that of Leipzig, where only twelve languages are taught, which however, include Turkish, Bulgarian, and Rumanian—tongues unknown in our lecture-rooms. French, German, Spanish, Italian, Russian, with Portuguese in one University, constitute, we believe, the whole tale of European languages for which our Universities provide.

ON February 26, M. Jaques-Dalcroze gave a lecture-demonstration to a crowded house at the Strand Theatre. A class of children, mainly from Moira House School, Eastbourne, were given a lesson by M. Dalcroze. Here he was revealed as the consummate teacher and friend of children: a little six-year-old, who had never had a lesson from him before, responded as if there were no watching throng, and as if they were friends of long standing. Then followed a demonstration by pupils of the London School. This was very delightful, and showed a great advance in the work since last summer. The whole performance should assure the public of the good and thorough work that the London School is doing.

THE INSPECTORS.

OUTSIDE: a February day, at its murkiest and wettest, was glooming down into a city evening. Inside: there were spring flowers—violets in a green pot, a cluster of mimosa, a jar of pink tulips were fragrant with suggestions of an atmosphere of cultured leisure. In reality they gave a colour to a small suburban sitting-room—one of two "apartments" which the thrifty, harassed mechanic's wife was glad to let to one of that least troublesome class of lodgers—the school teacher.

* * * * *

The woman with the tired face bent over the flowers in turn. "Oh, you beauties! How I love you—I love you!" In the tone there was a fierce hug rather than a mere caressing touch. She flung herself down on the one couch and closed her eyes. With tense nerves slackened, she dreamed for a few precious moments—a dream in which there were green, wind-swept spaces and open sky and the scent of the rain-washed earth.

An hour later exercise papers and red ink had created their own atmosphere in the little room; the tenseness had reappeared in the face and figure of the woman. Conscientious even beyond the degree of most women of her profession, she was held in the grey, tyrannous toils of the present; while, in moments of depression, she felt the uncertain terrors of the phantom future. Her interest in her work was a live one, but always coupled with the artist's consciousness of the far-offness of the ideal, and occasionally, when she forgot to be serious, with a humorous apprehension of the futility of the modern educational grinding at the mill. "How much I should like teaching if I had not to be paid for doing it" was sometimes her exclamation—unintelligible, perhaps, to any but herself.

On this particular February evening the bonds of the Present seemed to have slackened a little. Pay day had come round; perhaps it was that (alas for logic!) There had been the walk, misty and wet as it was, across the wind-haunted common, the modest recklessness of the flower-purchase. She suddenly flung down the "Tom Thumb" marking pen, got up, and—it was an old remedy—began to recite verses from her favourites, with the "Ode to a Nightingale" as climax.

But her audience, "The Development of European Nations." &c., presented stolid backs, the red-ink blot on one of her papers stuck there unblinking.

The rhythms had set her brain a-dancing, the limbs followed. Round and round the room she pirouetted, swayed, curtseyed, till, with a breathless, "There! Now I feel better," she went back to her books. A knock at the door, and the entrance of a fresh-faced young woman in nurse's dress found the teacher deep in "The Political and Economic Results of the Napoleonic Wars."

"How well you are looking to-night!" remarked the newcomer. "Not —"

"As tired and old as usual, eh, Prue? Oh, yes, there is never anything the matter with me except being tired, you know," laughed the woman.

"Are you coming to the votes for women meeting to-night? It will be rather exciting. Mrs. F. will be in fine form. But I forgot—you look upon meetings as a rare luxury. Poor Nancy!"

"Or as an evil—quite unnecessary? But I could not possibly go even if—. You see, I have had my walk." ("Ugh!" put in Prue.) "And, look here," with a rueful glance at the littered table, "and the Inspectors are coming to-morrow, so I must go to bed in more than my usual good time."

"Surely you don't mind them!" exclaimed Prue, with a glance half incredulous and all admiring.

"Oh, don't I!" After a pause: "To have a strange beast—man, I mean—walking into the room, breaking in upon the atmosphere of my class for five minutes, or half an hour

shuts me up inside. All my deficiencies seem to overwhelm me in a heap, and I am a wretched mass of nerves. Silly, isn't it? And at my age too! A great deal depends on this Inspection-to-morrow." Her look grew gravely wistful. "You know we are coming under the — Council. I ought to have been educated up to this sort of thing, but I wasn't, and my undisciplined nature doesn't take kindly to this twentieth century kind of feudalism. Now I am lecturing" (with a laugh). "You'll be late, dear. Good-bye. They also serve (a cause?) who only sit at home and sweat. I am getting very slangy in this Cockney world."

Then, her visitor gone, "Dear little Prue, she is young and fresh. But it will come, it will come. Poor little Prue!"

* * * * *

At last the woman with the tired eyes and the young heart was ready to retire. The mists had vanished, and there was not a cloud in the sky.

Following a habit of childhood, she peeped out before she crept to bed, and said "good night" to the twinkling stars. Then, folding her hands together as if it had been twenty-five years ago: "And please, dear God, help me not to mind the Inspectors!"

A. D. S.

THE TEACHERS' GUILD OF GREAT BRITAIN AND IRELAND.

[By a resolution of the Council of June 19, 1884, "The Journal of Education" was adopted as the medium of communication among members of the Teachers' Guild; but "The Journal" is in no other sense the organ of the Guild, nor is the Guild in any way responsible for the opinions expressed therein.]

QUARTERLY REPORT OF THE GUILD.

The Council met at 9 Brunswick Square on January 21, 1916. Present: Miss H. Busk, Mrs. Bannister, Dr. J. Brough, Mr. R. F. Charles, Mr. G. F. Daniell, Miss Helen E. Downs, Mr. E. K. Hanson, Miss M. Hockley, Mr. T. L. Humberstone, Mr. P. B. Ingham, Miss H. A. Martin, Dr. W. G. Sleight, Miss K. Stevens, Mr. W. Trevor H. Walsh, Dr. Jessie White.

In the absence of the President, Mr. Daniell proposed that Mr. Walsh act as temporary Chairman. This was duly seconded and carried.

The Council proceeded to appoint a Vice-Chairman.

Mr. Daniell proposed, and Mr. Walsh seconded, that Miss Busk be reappointed Vice-Chairman of the Council. Carried unanimously.

Miss Busk then took the chair.

The minutes of the last meeting of the Council were read and confirmed.

The Chairman proposed, and Mr. Daniell seconded, that a cordial vote of thanks be accorded to the retiring President, the Rev. Canon J. H. B. Masterman, for his frequent attendances at the meetings of the Council and at Committees, and the large amount of care and attention that he gave in promoting the welfare of the Guild and in helping in the decisions as to the rehousing and development of the work of the Guild. Carried unanimously.

The Chairman proposed, and Miss Stevens seconded, that Mr. Daniell be reappointed Deputy-Chairman of the Council. Carried.

A letter of resignation was read from Mr. J. S. Wise. The General Secretary was instructed to write a letter thanking him for his past services.

It was agreed to ask Canon Masterman to fill the vacant place on the Council.

The Council proceeded to appoint the Executive Committee. It agreed to reappoint the ten members of the late Executive Committee now on the Council, and to invite Miss Hockley and Mr. Hanson to take the place of Miss Holmer and Mr. Wise, resigned.

The Education and Library Committee was reappointed.

The Finance Committee was reappointed, with the exception that Mr. Walsh was appointed in the place of Mr. J. S. Wise.

Five nominations were made for the four representatives of the Council on the Club Committee, and, a ballot being taken, the following were appointed:—Miss Dearden, Miss Fewings, Mr. Ingham, Miss Martin.

The Thrift and Benefits Committee was reappointed.

It was agreed to re-elect those members of the Psychological Research Committee who were members of the Teachers' Guild,

and that the Chairman of the Committee be allowed to invite others to take part in the discussions.

Mr. Daniell and Mr. Fuller were appointed representatives on the Joint Scholastic Agency.

Mrs. White proposed, and Mr. Daniell seconded, that the following be appointed as representatives on the Joint Agency Committee under the new scheme:—Miss Busk, Miss Martin, Miss Hockley; and that the representatives for last year be asked to act until the new scheme comes into force. Carried. Later Miss Hockley asked to be allowed to withdraw her name, and Mr. J. S. Wise has been asked to retain his representation.

A letter was read from the Central Committee of National Patriotic Organizations. Miss Busk agreed to watch the proceedings on behalf of the Guild.

The following were elected members of the Guild—namely, Cardiff, 1; Ipswich, 1; London, 7.

It was agreed to contribute £1 if necessary towards the cost of the Report of the Conference of Educational Associations, and to have a reprint of the Presidential Address to be sent out with the next number of the *Teachers' Guild Quarterly*.

A letter was read from the Hon. Secretary of the Dublin Centre stating that it had been resolved to dissolve the Centre. The General Secretary was instructed to write and ask for further particulars.

The report of the Finance Committee was received. It was resolved to put on record an appreciation of the services of the Auditor, Mrs. Harold Cox. An application having been received for the hire of the Committee Room, it was agreed to refer the matter to a small Sub-Committee, with full power to act, but the Council were of opinion that it was undesirable, in consideration of future needs of the Guild, to let this room.

Mr. Charles proposed, and Mr. Walsh seconded, that the Sub-Committee consist of the Vice-Chairman and the Chairman of the Finance Committee. Carried.

The Chairman of the Finance Committee announced that a member offered a loan of £25 for ten years, without interest during the first three years, provided nine similar offers (i.e., a total of £250) were obtained before February 1. So far a total of £112. 10s. had been promised; so, unless £137 were found before the end of the month, those offers would lapse. He promised to try to persuade those who had offered sums of money on loan to meet the Builder's Account to extend the time limit of their offer.

It was proposed from the Chair, and carried, that the agreement for the Joint Agency for Women Teachers be sealed, subject to the exact form of the agreement being approved by the Executive Committee.

Regarding the Memorandum on L.C.C. retrenchments, it was reported that the request that a deputation might be received by the L.C.C. had been refused. It was agreed to alter slightly the Memorandum, making it more general in character, and to send it to the Board of Education and the press.

It was agreed that, unless the Vice-Chairman and the Secretary decided that there was not sufficient business, the Executive Committee meet on the third Thursday in each month, and that the following dates be sent to the President for him to choose the most convenient for Council meetings—namely, March 31 or April 7, June 2 or 23, October 6, 13, or 27, December 15.

Note.—The President has selected for Council meetings—April 7, June 2, October 13, December 15.

The official Report of the Fourth Annual Conference of Educational Associations, held at the University of London, January 1916, has been issued, and can be obtained from the Secretary of the Teachers' Guild, 9 Brunswick Square, W.C., price 1s. 6d. post free.

SCHOOL GOVERNMENT.

By CHARLOTTE M. WATERS.

I.—THE AIM.

IF I define the aim of education as the full and complete development of every power possessed by each individual man and woman, probably few teachers will recognize that I thereby challenge the educational system of 99 per cent. of our schools. The shibboleth is accepted and has as little effect on the average teacher's conception of his office as the old twelfth axiom of Euclid had on the average schoolboy's notion of parallels. This is a sweeping statement; let us see how far the various types of English schools aim at this goal. Questions of means I reserve for a second article.

Foremost in time, tradition, and reputation come the great

Public Schools. The first thing that strikes one about them is that they aim at a type, the individual is nothing. Each school has its own peculiar characteristic, and in the public-school world it is not difficult to detect in any given acquaintance the school he comes from, while, even where this is not possible, the general "public-school tone" is unmistakable. Now, I am far from arguing that this conformity to type is entirely bad, but it undoubtedly has its dangers for the individual. Whether it is possible to keep the good of the type and yet give free play to the potentialities of the individual, there is as yet no evidence; but the public schools are making no concerted effort in that direction. The type has its fine qualities; it can rule and it can obey, and it has a definite and, within somewhat narrow limits, a fine code of honour, to which it nobly adheres; above all, it supports authority, not that of a tyrannos, but of a strong and able oligarchy. It is, no doubt, an excellent school for the Empire's pro-consuls. In form, its government is an autocracy, handicapped by tradition and associations of old boys and mitigated by a prefectual system, of which, however, the personnel is the nominee of the autocrat. Intellectually it aims at producing scholars, in the narrowest academic sense of that word, and it succeeds in smothering the rest of its *alumni* in the indifference of intellectual sloth. It not merely does not develop, it does not recognize as existing, half the potentialities of its pupils. It has stifled the individual in the citizen almost as drastically as did Sparta. That the result is not more fatal is mainly due to the freer life of the Universities, to which proceed a larger proportion of its pupils than is possible from any other type of school.

Having considered the highest class of our boys' schools, let us take that of our girls, passing over the private schools, which, for good and for evil, are outside the organized or semi-organized system of the country. This class consists almost entirely of day schools and has committed itself to the policy of controlling but a small part of the girls' time. This gives it a bias towards a purely intellectual gymnastic, and thereby exactly reverses the tendency of the boys' boarding schools, which place instruction in a position secondary to character training. There is, too, another factor that works in girls' schools to an end different from those of their brothers. Born of the struggle for self-realization forced on the women of the mid-Victorian era, founded and staffed by those who were imbued with a passion to prove the intellectual capacities of their sex, the high schools have concerned themselves pre-eminently with brain-power and have lived in an atmosphere of rivalry. The duty of self-sacrifice was, no doubt, taught and, in small matters, practised, but the fundamental basis of the training gave it hourly the lie; for success—open, easily gauged success—was, and is, the dominant aim of every teacher and of most of the pupils. Examination successes filled the horizon and stultified the intellect of generations of girls, and only recently have there been any signs of their waning influence. Even now there are schools whose whole reputation is based on scholarship successes, and which regard a "First" in a University Tripos as the highest summit of human achievement. Where such is the ideal, it is needless to say that many of the potentialities of the individual die of inanition. The average girl who leaves the high school in its fifth form has, perhaps, a little more knowledge, but she is quite as uncultured and undeveloped as her brother who quits Eton or Rugby at the same standard. And she has not, as he has, developed any civic virtue or any corporate feeling. There is little or no corporate life in many of these schools; even the games are left to the few with the natural bent for them, and the result is only too obvious in the utter lack of professional feeling or loyalty to comrades that marks the bulk of women as compared with men. The leaders of girls' education have done more for the individual than their brothers, but have cast away the one great achievement that they might have learnt from them. Where, in some schools, character training holds as honourable a place as intellectual development, the aim is again a type and as conventional a type as the other. The convention differs, since "girls are

different from boys," but the difference is not in its favour. Authority and mechanical obedience to law are even more rampant than in the great public school. The aim seems to be very much what Grant Allen said of Girton, "to see how far you can educate a woman without emancipating her." For "educate" read "instruct."

I pass over the smaller boys' grammar schools; their aim is merely a copy of that of the great public schools, their success varying from a very fair substitute for its virtues to a caricature of its vices. The newer secondary schools, both boys' and girls', are, on the whole, staffed with teachers more in touch with modern educational problems, and, consequently, are more practical and often more alive. The individual undoubtedly gets more attention in these schools. Nothing is more marked, I think, in the educational world than the intense devotion and attention to the individual shown by the speeches of the Heads of these schools, wherever they mount the platform. They are young, they are attacking a new problem and are unhampered by tradition. As a whole, they are keen on experiment and not anxious to press into the new bottles the old wine of their own high-school or public-school training. Their schools fail, however, in complete aims, the girls' mainly lacking the corporate spirit, the boys' still cursed by the tradition of contempt for intellectual pursuits. And all these four types of schools are founded on a false basis that must for ever preclude a healthy development. This basis is the assumption that the child, whether boy or girl, is a dangerous animal, both to himself and to others, and that education is largely a business of heading him off destructive activities and dangerous adventure, and herding him along the broad and wide road of the majority. He is disciplined, but never self-disciplined; is taught the duty of obedience, but never the diviner call of revolt; is surrounded by an atmosphere in which to be inconspicuous is a merit and eccentricity a crime. Through it all runs the assumption that, left to himself, he is bound to go wrong; that his nature tends to evil and must be compelled towards right; that he and authority are bound to be at issue through most of the long years. The system does not aim at producing people who can think, only people who can herd.

I have not referred to the elementary schools, but the same indictment has been brought against them by others more able to speak of them than I. A recent writer, with a painfully intimate knowledge of his subject, has called the system of our elementary education "the conspiracy against children." It is based on the same idea of the congenital naughtiness of the child; the teacher cannot, if he would, consider the individual. (Let those who blame the elementary teacher try to handle sixty ten-year-olds on any principle but that of the drill-sergeant.) Corporate life is less existent than in any other kind of school, and instruction is the be-all and end-all of the teacher's life.

But there are a few schools in each of the classes that put another aim before them. Several of them are private schools, and so outside the scope of this article, but some are high schools or county and municipal schools, under heretical Heads, while scattered up and down the country are not a few elementary schools doing the finest work of all. These schools desire the exact opposite of the present system. For the individual they desire the fullest possible development of every faculty; for the community they aim at producing a civic sense of "each for all and all for each." Their common factor is the attempt to produce the man or woman who thinks. Now this ideal I propose to discuss, and later to suggest the machinery for attaining it. To develop every possible faculty, "head, heart, and hand," how few schools attempt this even on the intellectual side! We constantly and progressively extend the curriculum, and with what poor results! It is not the curriculum that wants altering, it is the atmosphere; it is not what you teach, but how you teach it. It is possible to get a more all-round training out of one dead language than some of us now get out of ten or eleven subjects. I can conceive more hand training in the production of a Latin play than in many a term of

so-called "manual instruction"; more "heart" training in the living study of one book of Virgil than in all the "religious instruction" or "moral education" spread over the dreary years of school life. It is not the dry bones of instruction that develop faculty, it is the exercise of the boy's or girl's whole soul on the task in hand. Every series of lessons should give scope for brain and body and character, and will do so if the teacher will be content to guide and leave the pupil to do. You may listen in a herd, you cannot act in a herd. The key-note of individual training is doing. A school that aims at this ideal will regard itself as a failure for every pupil it turns out with a single power not in a state of nascent development. The growth need not be advanced, but the growing-point must be there.

As a community such a school will cultivate the civic sense; for the rivalry of our present system it will substitute co-operation; the test of rightness will be the communal welfare. It will aim at the old Athenian ideal, the maximum of individual liberty compatible with the maximum of devotion to the State. And the product will be a human being who *can*. In estimating success, knowledge will take a second place, information will be regarded as of the merest utilitarian value, power will be the real criterion. What a man can do, what he has the power to learn, will be the standard of our esteem. "Get wisdom, and, with all thy getting, get understanding." We shall not rate the success of the school by its pupil's achievement at eighteen, but by his promise for thirty. In character we shall produce a human being with powers of imaginative sympathy, alert for the call of his fellows, and filled with a loyalty that, beginning at school, will not stop there, but extend in ever widening rings to every relation of life: self-realization for the end of self-devotion. The revolution of our school machinery of government necessary to the furthering of this ideal I hope to deal with in a second article.

CORRESPONDENCE.

F. E. THOMPSON OF MARLBOROUGH.

To the Editor of The Journal of Education.

SIR,—The thanks of all who knew and honoured F. E. Thompson are due to you for the admirable accounts of him published in this month's *Journal of Education*. As an old pupil of his in the seventies, I can bear witness to the truth of what is said in your pages of his teaching as master of the Upper Fifth, which remains fresh in my memory after many years. Whatever he touched was vivified by his keen interest in the things of the mind and the breadth of his sympathies. I recollect as specially instructive, and a striking innovation upon the usual curriculum, his lessons on the history of Europe from Julius Caesar to Napoleon Bonaparte, based upon Freeman's *General Sketch* as a textbook, and illustrated by frequent reference to Bryce's *Holy Roman Empire* and other works. A vast subject, and one not easy to make interesting or even intelligible to boys. Here the *esprit d'ensemble* which was characteristic of Thompson, and his firm grasp of the essential, came into play. He was always adding to his knowledge, and kept up with current literature and thought to an extent which few busy schoolmasters find possible. After his retirement, his activities and occupations were manifold, and old age seemed to make almost no alteration in him. In the last letter I had from him, he spoke with warm appreciation of the poems of Charles Sorley, a young Marlburian of high promise who has fallen in the War, and of an article by the boy's father, Prof. Sorley, on Mr. Balfour's Gifford Lectures.

"One of his few surviving colleagues" mentions that it was only after Thompson had left Marlborough that he (the said colleague) came to know fully his powers as a public speaker. I myself well remember that the little speech

which he delivered when the Beesly memorial library was presented to the school a few years ago revealed to me a gift of natural eloquence which I had never before suspected in him. How good a writer of English he was may be seen from occasional papers such as the reminiscences contributed by him to the *Life of F. W. Farrar*, which make one wish that he had written more.—I am, Sir, yours faithfully,

C. L. D.

March 6, 1916.

THE BILINGUAL POLICY IN CANADA.

To the Editor of The Journal of Education.

SIR,—With reference to the article that appeared in the March issue of *The Journal of Education*, I beg to state that your very sensible remark—"It would be an excellent thing for the future unity of Canada if the English (and French) speaking inhabitants of that fine country would learn each other's language"—is the best advice that could have been given to the Canadians. Canada, as few people know, is in the same predicament as Mauritius, so far as the English and French languages are concerned, with this difference, however, that in Mauritius the course recommended has long been in practice, with the result that the same local barristers and attorneys can plead one day in good English before English judges, and the next in excellent French before Mauritian District Magistrates, in whose courts the liberal English Government allows French to be used. What Canada, therefore, requires is a liberal-minded Director of Public Instruction, like the one now in Mauritius. When this learned gentleman—an M.A. of one of the English Universities—took up his new duties in that British colony, he understood at a glance the policy of the English Government and the feelings of the inhabitants. He did not in the least interfere with the traditions of that country. He even, like the sensible man he is, hastened to give the finishing touches to his theoretical knowledge of French, which he now speaks fluently and well, in order to be able to superintend personally every subject taught in the schools, as well as those that are taken up by the "Royal College," the only secondary school in the island—a school that has been affiliated to the Universities of Oxford, Cambridge, and London for nearly fifty years.

For the last sixteen years that this Director has been in office he has always made it a point to encourage the study of French and English all over Mauritius. This is exactly what should be done in Canada. We should not lose sight of this fact—that, if English should be well taught in French-speaking colonies under the British rule, the authorities ought at the same time, to use Mr. Edmund Gosse's happy expression, see "that the radiance and warmth of French genius is kept up side by side with English," as England and France are henceforth bound by unbreakable ties of friendship—that is to say, by those ties which for the last nineteen months have been hourly steeped in blood on the same field of battle.

ADOLPHE BERNON.

61 Talbot Road, Bayswater, W.

A CORRECTION.

To the Editor of The Journal of Education.

SIR,—In your report (which I have only just seen) of the January Conferences, you make me say that the King Alfred School, judged by the test of examinations and *scholarships*, has quite held its own.

As my only reference to *scholarships* was to say that we had never had (and would never have) anything to do with them, this is a very serious misrepresentation, which I beg you to allow me to correct.—Yours faithfully,

JOHN RUSSELL.

Ellerdale Road, Hampstead, N.W.

March 25.

LORD HALDANE ON GERMANY.—Lord Haldane is incorrigible. In the very midst of a great war he dares to say that the German schoolmaster is more to be dreaded than the German soldier, and that, to develop your trade, classrooms may be found more useful than Chinese walls. He was more afraid, he told the University of London Union Society, of continuation schools than of 42-centimetre guns. The most modern form of these schools was extending over a large part of Germany, and was designed to extend over the whole Empire. Its fundamental principle was the use of the studies necessary for a trade as the means of acquiring both technical skill and general knowledge. We should like a few more sermons on this text. They would be far more profitable than facile denunciations of *Kultur*.

ENGLISH IN THE LOWER FORMS OF A GIRLS' MUNICIPAL HIGH SCHOOL.

By RUTH M. FLETCHER.

THE aim of English teaching is twofold—first, to develop and guide the child's æsthetic sense, and, by so doing, help to bring refinement and culture to the mind; secondly, to foster the power of self-expression in speech and writing. The means usually employed for achieving this end are composition lessons, reading lessons, recitations, and so-called literature lessons, when poems, plays, essays, &c., from the English classics are read, dissected, and explained. This may be a satisfactory method for girls in their teens and onwards, but for children under that age I maintain that something more vital and true to the aim can be produced by quite a different method.

Little girls of eleven and twelve have the following characteristics very strongly marked:—They are intensely active and desirous to be doing something the whole time. They are also impressionable and responsive, and at the same time they still possess the gift of unself-consciousness. If these qualities in the child can be definitely used, she will be happy, interested, and natural. Her work, therefore, will be spontaneous and individual. The teacher must suggest, guide, and encourage, and the child must be free to express her own individuality.

For the last six months I have been endeavouring to work out the above theory. The class consists of thirty little girls; the average age is twelve years eleven months. The majority of them came from the elementary schools just over a year ago; they are an upper division on the ground of ability. Every form in this school has an English lesson a day, so that means we have five lessons a week and two homeworks. Many of the means I have employed were suggested to me by a visit to the *Perse Boys' School* at Cambridge. I have also made use of the five *Perse Play Books*. I divide the work up under five big headings—miming, oral work, learning and reciting poetry, original work, individual reading.

I. *Miming*.—The child's wish is to be active—to be doing something definite. She revels in make-believe, and has a great capacity for it. This, guided carefully, is a great quality, and should be made use of in English. We began with words and costumes as well, but discarded first one and then the other. The words would not come naturally; if they did they were broad dialect and quite inadequate, and the dressing-up took so much time that there was generally hardly any lesson left. So we considered both words and costumes to be a handicap at this stage, and a hindrance to free expression; the interpretation is much more real when conveyed by actions and gestures, and the very effort of bringing out the force of every word trains the child to realize and feel its exact meaning. We began with nursery rhymes—*Old King Cole*; *Tom, Tom, the Piper's Son*, &c., and then went on to fairy stories—*Cinderella* was chief favourite here. Finally, we reached what was to be our real work—*Lamb's Tales from Shakespeare*. These, treated in this way, are an endless source of delight. The story is read in class; the children then plot it out in scenes, the caste is chosen, and then, without further preparation, the play is mimed. A king wears a paper crown, soldiers carry rulers, the stage is the hall platform, the audience the mistress and the rest of the class, and the only speaker is the child who introduces and explains each scene before it is given.

II. *Oral Work*.—We devote a lesson every week to this work. It takes the form of story-telling, debates, or lectures. The mistress has nothing to do with the control of the lesson. She is merely an unobtrusive listener, and vacates her desk of office to the chairman who has been previously elected from amongst the class. This chairman rules the meeting, keeps order, calls up and introduces the various speakers, encourages discussion after the speech, and, finally,

closes the whole meeting. If it has been a debate she must summarize the arguments brought forward by both sides, and announce the voting on the question. Each speaker has a scribe who, whilst she is speaking, writes down her main points on a blackboard, and the audience listen, take notes, and afterwards criticize and discuss. Ghost stories were at one time in great demand, but I think now the debates are the more popular: everyone has something to say on such a subject as "It is better to be a Princess in a Fairy Tale than a real Princess." For lectures the lecturer first has to read up and make notes for herself on such subjects as the stars, old English games, Shakespeare. She then gives the lecture, and the others write down the chief points.

III. *Learning and Reciting Poetry*.—I find that these children will learn a poem taught orally in class in less than half the time it takes them to learn the same poem alone as homework. This learning by sound and not by sight helps to instil or develop a sense of rhythm and metre which is of value in itself and must also help in their own poetical efforts.

IV. *Original Work*.—This is perhaps the most important side of the work, for it means the expression of the child's own individuality. The teacher's ingenuity is taxed to supply the stimulus, but, if her suggestion has been a happy one, great is her reward. Each child should write something at least once a week. The choice of subject must be varied, for the individuality of thirty little girls is varied and cannot possibly express itself truly and freely in the same way; one child likes describing something, another loves ghost stories, a third prefers poetry, and so on.

At present I have entirely abandoned the "composition" lesson. I suggest subjects to write about, but always leave it clearly understood that these are only suggestions, and that the writer is quite at liberty to choose her own subject if she prefers. This, I find, has resulted in a marked improvement in style, though sometimes—especially in the short story—the subject chosen by the writer has been uninteresting and commonplace.

(To be continued.)

THE LITTLE COMMONWEALTH.

[Because men that are free, well borne, well bred, and conversant in honest companies, have naturally an instinct and spurre that prompteth them unto virtuous actions, and withdraws them from vice, which is called honour: those same men, when by base subjection and constraint they are brought under and kept down, turn aside from that noble disposition, by which they were formerly inclined to virtue, to shake off and break that bond of servitude, wherein they are so tyrannously enslaved, for it is agreeable with the nature of man to long after things forbidden and to desire what is denied us.]

THE Abbey of Theleme, it will be remembered, was a community of just such men and women as Rabelais here describes—"free, well borne, well bred, and conversant in honest companies." They had but one law, written above the entrance gate, "*Fay ce que vouldras*"; and it was enough, for they were an ideal society, assembled by choice and mutual taste, and had learnt the pleasure of harmonious living.

In a northern bay of the downs that divide Sherborne from Dorchester lies an inconspicuous group of rural buildings round a paved quadrangle, in the middle of fields and a tangle of narrow lanes. Behind it woodland rises to the downs, and in front stretches a wide range of pastoral and wooded country. This is the Little Commonwealth of Evershot.

The citizens of the Little Commonwealth did not elect to live together. They belong to the far more numerous body of men, described by Rabelais, who, "by base subjection and constraint, are brought under and kept down," unaware

that they ever were inclined to virtue. They are boys and girls who, for one disorder or another, have come before the police courts—for housebreaking, shoplifting, swearing, or pronounced intractableness. But for the Little Commonwealth they would be now, as some have been more than once before, in reformatory or prison, to learn still more to long after things forbidden. These citizens certainly know nothing about the Thelemites and the single law that governed them, but if we substitute the plural for the singular we shall find their constitution is the same. "Do as you will" has been said to the citizens of the Dorsetshire Commonwealth, and they have responded in a manner that to some seems miraculous, to others natural, and has in any case completely verified Rabelais's noble declaration, and justified the confidence of Mr. Homer Lane, the director, or, as the citizens regard him, the father of the Little Commonwealth.

By thoughtless parents two methods of treatment are practised towards their children—spoiling and repressing. One follows the other as the night the day, though sometimes night sets in from the beginning. One method is as pitiless as the other. In either case the creative faculty, the most precious of all, is in danger of being stifled or mutilated. The citizens of the Little Commonwealth are as little spoiled as they are repressed. There is nothing in the place, beside its mere furnishings, that they have not made for themselves. There were no rules. At the beginning it was literally, "Do as you please. Be disorderly, lazy, swear, steal, lie if you please, and if you enjoy the fruits, for there will be no one else to gather them for you."

At first, there were appeals to Mr. Lane's mediation, but they fell on deaf ears. In the George Junior Republics of America with which the Little Commonwealth is sometimes wrongly associated, there is an ultimate court of appeal in cases of emergency. In the English Commonwealth there was no one to save the citizens from themselves. They must be their own guardians of the peace and heal their own disorders. And gradually the conception of a social law began to dawn. The citizens became their own law-givers. The boy or girl who enters the Commonwealth now finds a weekly court, a judge, a remarkable code of laws and no less remarkable series of punishments. Of course, Mr. Lane's participation in the government is very far from passive. He is present at all the courts and takes an active part in the debates, and has been known to carry a cause he had at heart by arguing eloquently against it. But he never forces the pace. He has infinite patience and an absolute faith in that instinct and spur which is called honour, that prompts free men to virtue. Many of the original laws, especially the repressive ones, have died a natural death. There are still some that want shedding, but the Commonwealth must develop by the mind of all its members, not through the perceptions of a few. A perfection that is imposed has no educative value, while the attainment of an imperfection that is expressive of growth may be of quite incalculable educative significance. There are many flaws in the Little Commonwealth, happily; but they are the flaws of a developing vitality. There is never the flaw of unreality. The atmosphere is one of extraordinary confidence, intelligence and wellbeing, and, towards the visitor, of very genuine friendliness and goodwill. It would be hard to imagine a more gracious or openhearted welcome. And the visitor is really the guest of the citizens, is invited to their meals, and freely adopted into their life.

The Commonwealth consists at present of about thirty citizens and three or four helpers. Its numbers are considerably reduced by the enlistment of all boy citizens of serviceable age in the Army or Navy. There are, besides, seven or eight founding babies between the ages of one and six, who are educated on the Montessori method, and are delightfully intelligent and friendly. The buildings consist of a big hall, laundry, shop and office, and three or four dwelling houses where boys and girls live together. A new house is now in building, and one that was partly burnt down is under repair. The Commonwealth is served entirely by its citizens, who build, wash, cook, clean, and keep

shop for wages as in any ordinary community. Food and clothes are the concern of the citizens alone, though they have the advantage of Mrs. Lane's most capable advice, and the dress of the girls has undergone a notable modification, since the Commonwealth started, in the direction of simplicity and suitability to their surroundings. The same citizen is not always confined to the same occupation. There is a frequent interchange of work, which keeps the interest fresh and distributes fairly the less pleasant jobs. Every house is ruled by a house-mother, who during her term of office is entirely responsible for its wellbeing, cleanliness, and discipline. The best house-mother, a girl of a warm, and at times violent, nature, was a "notorious character" in the London police courts, and has been severely handled by the police, whom she had no doubt also sufficiently exasperated. The story of her entry into the Commonwealth is very characteristic, but too long to tell here. Almost without exception, the best citizens are those who, in one form and another, were the most "hopeless cases." As they were then active in combating the repressive influences for which society stood to them, so now, that they find themselves included in the scheme of things and actually shapers of that scheme, they are most active in co-operation. Their vitality is flowing with the stream instead of fighting against it, and all the force that went into destruction is now employed in building.

The Little Commonwealth is scarcely more than two years old—it is in its infancy. With its growth it will have many new problems to face, and the profound psychologist, teacher, and adventurer who is at its head will not be satisfied till its principle of self-government has been put to the test by a citizenship of two or three hundred.

MODERN LANGUAGES AND MODERN POLITICS.

IN a letter to the *Times* on March 8, the Vice-Chancellor of Sheffield University announced that a Lectureship in Russian had been endowed at that University by the munificence of Messrs. Vickers, Ltd. A meeting of the leading men of the town, it appears, had taken place some time previously—on the occasion of an address by Mr. C. Nabokoff of the Russian Embassy in London, and, from what was said then, it was evident that, if Messrs. Vickers had not most liberally offered to bear the whole expense, the necessary funds would have been readily subscribed by the citizens of the town, in order—amongst other reasons stated—"to mark in some practical way its admiration for the heroism of the Russian armies." Sheffield University is to be congratulated, and Messrs. Vickers deserve high praise for their public spirit and generosity. Of the value of Russian studies and the importance of the step taken there can be no two opinions. But quite apart from this, one cannot help being struck by the motive stated and quoted above; for if admiration for Russian heroism is to be a reason for learning their language, it appears to follow that if ever we should find ourselves in conflict with them—which, though a remote, can hardly be said to be an impossible contingency—we should then cease to study it. And the question arises whether modern studies can have no securer foundation. Moreover, since it has recently been suggested in certain quarters that now that we are at war with Germany we should banish German from our schools, one cannot help suspecting that a certain amount of confusion of thought is prevalent as to the reasons for which modern languages are learnt and the spirit in which they should be approached.

Of all the various reasons that can be brought forward in favour of the teaching of modern languages, what may be termed the sentimental motive is the least sound. The notion appears to exist in the minds of some persons that we

learn a foreign language as a kind of extravagant compliment to the people that speak it, and that the aim of the teacher should be to bring about and foster friendship with foreign nations. To know a foreign nation is good; but to know a nation is no more to love it than to know an individual is to love him. Common experience teaches us that the opposite result sometimes ensues. Even in those cases where a real and warm attachment does grow up, it is often tempered by many regrets, and there are at times not a few characteristics of our foreign friends that we would fain have otherwise. Indeed, an intelligent man's affection for his own people is occasionally qualified by important reservations, and we are reminded of the naive admission of the American critic that even he did not love all Americans! But to suggest that we should approach a foreign nation with the preconceived intention of admiring all that we find is unwise; such an attitude is neither creditable to ourselves nor truly a compliment to the people who suffer from it, or are amused by it.

Neither the brotherhood of man nor any other good cause can possibly be promoted by mushy sentimentality. Imaginative sympathy, indeed, is necessary, for without sympathy there is no insight; but indiscriminating admiration is just as reprehensible as prejudiced hostility, and both have their roots in imperfect knowledge. An enlightened and critical knowledge of the foreign nation is what is desirable—complete vision and not partial vision.

This complete knowledge, however, cannot be gained from the literature alone. In the first place, the classics of any country are generally the product of a past age, and, in so far as they ever represented the spirit of the people at all, they represented it as it was at the time when they were written. The spirit of the German people, for instance, was very different in the neighbourhood of the year 1800—the period when their literature reached its highest point—from what it is to-day. In the second place, the finest things in literary art are something more than national: they belong to humanity and possess the quality of universality. Heine's sonnet to his mother can bring tears to the eyes of any human being who can read it, and Goethe's lines,

Was du ererbst von deinen Vätern hast
Erwirb es um es zu besitzen,

are as fraught with meaning for English people to-day as for any other on earth. It is, in fact, quite clear that from the literature of a people alone not only an imperfect, but in some cases a wholly misleading, impression of their characteristics may be derived. The remedy is obvious; we should study side by side with the literary masterpieces the civilization and history of the foreign nation. And this brings us face to face with the source of all the confusion—to wit, the present chaotic state of modern studies, to which no definite aim or direction has ever been given.

We have often been reproved for advocating the teaching of modern languages on utilitarian grounds, as though usefulness were a fatal drawback. But we need not hesitate to do so. The study of mathematics can, no doubt, be supported on excellent educational grounds; but, if its place in the curriculum were threatened, it is its usefulness that would keep it there, for we know that, if our knowledge of this science were to perish, all our material civilization would crumble to atoms. And the usefulness of modern languages depends not only on their application to commerce, not only on the fact that by neglecting them we cut ourselves off from the progress in philosophy, science, and history made by other nations; but mainly on the fact that taught as a part of a properly organized modern curriculum they are the key to an understanding of the civilization of modern Europe, ignorance of which is not only a disadvantage but a danger.

E. CREAGH KITTSON.

SAFE NOVELS.

Moll Davis. By BERNARD CAPES. (6s. Allen & Unwin.)

From the moment the rosy nymph, Moll Davis, smiles down from the balcony of the "Mischief Inn" on a June morning of 1661, right near the first page of this narrative, Mr. Capes never flags in his good will to entertain us. Verbal wit and plenty of it! You cannot have too much local colour. If there is a good plot—well; if not, the author has plenty of colours on his palette, and you may take your choice—the period is so rich. For our part we choose an incident "purely in the nature of an interlude, which may be wholly skipped without hurt to the main narrative by those who have an unconquerable repugnance of sentiment." Perhaps those who prefer this pathetic and quite independent interlude may be allowed to skip the main narrative. But, *Bingawast!* They would do ill to miss the many beautiful *straf*-words. And so there is no help but they must peruse the whole.

The Way of the Cross. By DOROSHEVITCH.
(2s. 6d. Constable.)

In his brief introduction to the little volume he has admirably translated, Stephen Graham tells us that this story, by a famous Russian journalist, of the flight of Russian and Polish fugitives into the interior after the German invasion of 1915, was contributed in October to the *Russkoe Slovo*. The style is arresting and impressionist; breathless, as of some one under a great stress calling to mind a terrible experience, with effort disconnectedly. Sometimes a line forms the paragraph, or a word, or a sign merely. But the style is simple and strangely suited to this story of prolonged uncomplaining agony. *The Way of the Cross* opens a glimpse of the civilian side of that tragic military retreat which forms the background of Hugh Walpole's *The Dark Forest*. And as in that extremely powerful book, so here, above all the horror of the story broods the beauty of the world and of human life. We will quote a few fragments, though space forbids us to keep the original paragraphing. "Along this 'Way of the Cross' takes place—a selection. A terrible 'natural' selection. . . . All the weak ones perish. Both of people and cattle. They are tried by sickness, hunger, and cold. . . . These strong people with their strong horses are like a marsh overgrown with emerald green grass, behind which is a swamp and a quagmire. 'A strong front' which has, however, a dreadful significance. How many 'sacrificial victims' remain behind for only one of those who have got through." "No one questions them, nor exclaims at their misfortunes. It's as if they had lived there for a century and not arrived yesterday from some unknown place. There proceeds: assimilation. The country as silently drinks in the river as the river comes silently to it." "It's like being in a desert, says the peasant. A desert! Like that. All around such a mass of people, and you say a desert, protests the policeman. For us it is a desert. It's dark all around. We can see nothing. It's a desert." "All the cemeteries are in beautiful places. Some of them, earlier in the day, have looked out a beautiful little hill. Some, a picturesque ravine; some, a spot under a canopy of foliage. But certainly a beautiful spot. All these orphan cemeteries are painfully beautiful. The graves are fashioned with love." We hope that many will buy and read this little book whose price puts it within the reach of all.

Three Pretty Men. By GILBERT CANNAN. (6s. Methuen.)

This is a work of mature power and insight, the most remarkable that Mr. Cannan has yet produced. The story is set in the early Victorian period, when Manchester, transparently veiled under the name of Thrigsby, was just beginning to spread its net wider and wider over the land. There is an hereditary bond between that time and the present which, though never emphasized, scarcely even suggested, by Mr. Cannan, is brought home to us by the events of to-day. *Three Pretty Men* is an extremely patient chronicle of a Scotch family who, early in the book, migrate to Thrigsby, drawn thither by the widowed mother's ambition for her three sons, an ambition the goal of which is their association in business with her brother, a cotton magnate. The materialism of Thrigsby—the push, the grind, the insensibility to all that does not make for prosperity ponderable in £. s. d.—is mirrored in and reflected from the sensitive, passionate, and probing spirit of Jamie, the eldest son. The story is concerned with his development in a scene as little cognizant of his goal as if he were a being from another world. The small boy, Jamie, came to England as to a high adventure or the conquest of a kingdom, with an intense consciousness of dawning power under his Scotch reserve. "I've been thinking of Napoleon, and wondering what he would do in the like circumstances. He wasn't so unlike me, with a wonderful mother and all." He does enter his kingdom, but uncrowned, and with many a token of defeat; and Thrigsby is all unaware. There is a

whole gallery of portraits beside Jamie, very various and all excellently drawn, though the favourite sister, Mary, who figures chiefly in her letters from abroad, is an evident mouthpiece of the author, and remains rather an idea than a person. There are many scenes which tempt quotation, but near the close the death of Margaret Laurie, the mother, is certainly the crown of all. The reader, faced with the close-packed pages and the dialogue bedded in a solid wall of print, may be tempted to turn back, but no one who wins through will doubt that Mr. Cannan's most leisurely method has justified itself.

The Ends of the Earth. By MARY GAUNT. (6s. Werner Laurie.)

In her autobiographical preface, the author describes the origin of many of the stories in this volume. All are based on actual incidents either experienced by the writer herself or related to her at first hand, and all are set in scenes with which she is familiar. The scene is laid in many places far distant over the earth, and with them all the writer is familiar. She has considerable power of description and a gift of story-telling, but though the characters are quite appropriate to the story they are, on the whole, less interesting than the scene and incidents in which they figure.

THE OXFORD ENGLISH DICTIONARY.

A LECTURE by Dr. W. A. Craigie, one of the joint editors, delivered to the English Association, conveyed some interesting details as to the scope and progress of this great undertaking now nearing completion. It will be remembered that Sir James Murray, whose name it will always bear as architect and director-general, had hoped to celebrate in 1917 his eightieth birthday and the consummation of his labours. If one half of this hope was frustrate, the other half will not have to wait long for fulfilment. Of the ten volumes eight have appeared, the ninth is approaching completion, and the tenth is well in hand. The pages of the Dictionary will number 14,500; the words treated will not be far short of 400,000,

and the quotations will probably reach 1,700,000. The most descriptive of the several titles by which it can be known is, in Dr. Craigie's opinion, *The Historical English Dictionary*. Its aim is to show in what sense a word was used at any given date from the eighth to the twentieth century, and to include all words save those that did not survive the eleventh century. Taking the word "value" as an illustration, the lecturer showed the method followed by contributors in determining and tabulating its nine meanings. The word "get" required 22 columns to define and illustrate its 73 different senses, and the 245 particular uses. "Give," "go," and "set" occupy respectively 25, 35, and 55 columns.

One subsidiary use of the Dictionary was happily illustrated by the lecturer. He showed how often what pass for neologisms or original coinages are to be found in older writers, and from them receive a new life. To Sir Walter Scott, who is rarely caught napping, we owe "raid" and "henchman," and R. L. Stevenson (a "sedulous ape," as he called himself) has similarly enriched our vocabulary.

Not even the Oxford Dictionary can aspire to be perennial, and the task of the lexicographer grows harder decade by decade. Dr. Craigie made the wise suggestion that future compilers should not attempt to include purely scientific or technological words, but leave them to be dealt with in special volumes, thus preserving the distinction between the dictionary and the cyclopædia.

We are not a braggart nation, but we may point to the Oxford Dictionary with just pride, as unrivalled of its kind. Littré, as the work of a single scholar, is perhaps a more wonderful performance, but in fullness, in arrangement, in typography it cannot compare. Grimm, begun in 1854, is still in progress, and, as subscribers know to their cost, it is a lottery till complete. Neither Italy nor Spain has attempted anything on the same scale. We are proud of James Murray and his fellow workers, Henry Bradley and Dr. Craigie, and we are no less proud of the University of Oxford and its Clarendon Press.

DUSTLESS

and HYGIENIC ROOMS.

In SCHOOLS, LABORATORIES, &c.

USE

The British Made and Owned

Odourless, or Powerful Germicidal

FLORIGENE

(A Regd. Name suggested by FLOOR-HYGIENE)

Very **EARLY** in the **EASTER VACATION** for best results.

"Florigene" has been continuously used for many years on Wood, Concrete, and Stone floors of every description, also on Linoleum and Cork Matting in Government and Municipal Buildings, and in all kinds of Schools, and other Institutions in the United Kingdom and Colonies.

"Florigene" costs little, is easily applied by unskilled, and saves time and labour.

It is IMPORTANT TO NOTE that

ONE APPLICATION of "Florigene" ALLAYS THE DUST and DIRT for 2 to 12 months, according to traffic, not only during each sweeping (without Sprinkling of any kind) but also throughout all the intervening periods—which is of greater hygienic importance.

These sanitary, labour-saving, and economic advantages are **NOT** attained by sweeping-powders, or any other method.

Not sticky—the ordinary daily dry sweeping alone required—Scrubbing being optional.

"Florigene" is strongly recommended by Medical and other expert authorities.

A Head School Mistress writes:—

"I am glad to have the opportunity of recommending 'FLORIGENE.' We have used it regularly on both wood and linoleum, and found its effects most beneficial, both in laying the dust and preserving the surface. The linoleum scarcely shows wear after six years."

(Repeat orders since received.)

A Grammar School Head Master writes:—

"We have used your 'FLORIGENE' for several years in this School, and we have found it excellent in keeping down dust, which is now never to be seen anywhere. I believe the health of this School has been better since. The air is certainly more pleasant to breathe when movements are going on, there is also a great saving of labour in cleaning."

(Repeat orders since received.)

Numerous similar Testimonials can be produced.

FOR RURAL SCHOOLS
AND
AGRICULTURAL COLLEGES.

Now Ready. Price 3s. 6d.

RURAL ARITHMETIC.

Including a thorough treatment of Agricultural
Measurements and Calculations and of the
Business Transactions of the Farm.

By ARTHUR GOUGH RUSTON, B.A., B.Sc. LOND.,
Science Tutor in the Department of Agriculture at the
University of Leeds.

This book is intended for use in all kinds of rural schools, especially those secondary rural schools working under the schemes of the Boards of Education and Agriculture, Evening Classes in rural centres, and Agricultural Colleges. It should also be of the greatest use to the practical farmer, who is becoming in these days more and more a business man.

The book provides a thorough training in Arithmetic as applied to the practical problems of Agriculture, and combines what is purely practical with scientific arithmetical reasoning; thus it is in the fullest sense an Arithmetic of Agriculture.

LONDON:

WILLIAM RICE, JUNIOR, 3 BROADWAY, LUDGATE HILL, E.C.

THE VALUE OF DRILL.

WE have all heard a good deal lately of the influence of the drill-sergeant on German education, and it is always assumed that it is necessarily a bad influence. Mr. Holmes, in an address to the Montessori Society, is reported to have gone all the way and stated roundly that there is no moral value in drill at all. But many of those who denounce the method of drill as employed in intellectual education, think much of it in relation to physical training, and will probably assert at National Service meetings that military drill is a most beneficent factor in moral and physical development alike. At least, they will bless it when it has the charmed word "Swedish" attached to it. The fact is that when we apply the term "drill" to certain methods of intellectual instruction, we are using one of those dangerous metaphors which are so obvious, and yet so limited, in their application. To the present writer, a few recruit drills with the local V.T.C. have given some matter for reflection on the subject. After an interval of twenty years they have lost none of their fascination, and are undoubtedly educative in a very real sense.

To Mr. Holmes, to be drilled means to be reduced to the position of a machine, or rather, of a portion of a machine. The officer or sergeant stands for the mechanic who works it, and each man in the squad is as helpless and as passive, and as lacking in initiative, as the cog on a driving-wheel. But to state this view fully is at once to exhibit the fallacy contained in it. Even the cog is not helpless, in a sense. If it goes wrong it throws the working of the whole wheel out; only it cannot go wrong voluntarily. The recruit can, though he had better not appear to. But the great difference is that each individual man in a squad learns to carry out the order given by the exercise of self-discipline, the very ideal of those who most vehemently denounce the employment of the drill method in the development of the

intellect. He has to control his muscles and think about correcting his faults, and regulating his movements by those of others, feats which require the exercise of all the more important human faculties. Finally, whatever he may lose in the way of volition is gained by the unit as a whole. The volition of a unit is anything but the sum of the individual volitions of its component parts. Some people think that rowing is a mechanical activity. But those who think so have not rowed in an eight. If they had, they would know what a subtle thing is the art of "rowing together." It is, indeed, the sinking of individuality. Individual styles will almost always spoil the form of a crew. But the individuality of the whole crew is a thing of magic, which no one can exactly describe or analyse. It is akin to the feeling of nationality and religion, and many other examples of the corporate consciousness. And the same holds good of a squad. It is not the sum of the skill of the recruits in counting the right time for the motions of turning about or sloping arms that causes efficiency, but the feeling of the squad as a whole for the right rhythm of the thing.

Now "drill," as applied to the intellectual activities of the classroom, usually means something quite different from this. To begin with, the subjects of it are not co-operating, as a rule, but competing. Those exercises which are really co-operative, such as oral composition or the solving of a problem on the blackboard with the aid of a class, are precisely those which are regarded as being the opposite of drill, because they appeal to initiative and thought of a non-mechanical kind. The operations of what is usually called intellectual drill are often of such a nature as to call for the exercise of some single faculty, not of the highest grade, chiefly memory, as in the repetition of accidence. Moreover, in so far as these functions are of value they are akin to the art of the recruit squad, and so far as they are really mechanical they are removed from the ideal of the sergeant or platoon commander.

Having reached this paradox, it is, perhaps, now time for us to recognize the limitations of the drill system. The principal limitation is, of course, the fact that, however beneficial may be the activities which are required to accomplish the object in view, that object is determined and imposed by the will—possibly the arbitrary will—of another. Volition and effort are required on the part of the man in the ranks, but not usually initiative. The saving point of modern drill, regarded as a means for making men, is the development of movements in extended order, trench warfare, scouting, and the like, in all of which some initiative, and in some a great deal, is required. Inspecting officers note adversely the lack of it in the rank and file. But even here, it is plain that the end in view is still willed by another, and if all our training in life were of this kind, we should be imperfectly trained, for in the most important situations of everyday life we ourselves have to will the end and object. We may determine the examination for which a boy is to work, but to attempt to determine for him whether he shall be a lover of Dickens or Thackeray, a Liberal or Conservative, an Imperialist or a Little Englander, is absurd. We may lead, suggest, influence, but unless the choice is the boy's, it is valueless.

To point the moral with regard to the teaching of patriotism in German schools would be unnecessary. It is done every day in nearly every journal or magazine. The mistake in applying the art of the drill sergeant to the classroom has not been that of applying something which is wholly inappropriate and invalid to intellectual education, but, first, of applying it universally and indiscriminately, and, secondly, of mistaking its nature altogether. There is a certain analogy between the learning of company-drill and the learning of a language or a science. Compare with these latter the learning of musketry rather than company-drill, and the resemblance is at once both close and obvious. There are the rules and instructions in the drill-book or the grammar. There is only one way of placing the verb correctly in a German sentence or loading a rifle. It is true

that we do not always do either of the processes according to the instructions of the book; we often do it by imitating the motions or speech of our instructor. Moreover, there comes a stage when no instructor can help us further. The choice of the right epithet or the right allowance for the wind depends on the possession and exercise of the instinct for language or marksmanship. It is just there that drill ceases to be of any avail, though self-discipline is still active, for it needs self-discipline to avoid completely the use of stock phrases and journalistic epithets—though here the analogy of the rifle fails me. The sergeant and the teacher can at that stage act best as critics, not instructors. To introduce drill where what is wanted is taste or judgment, is the error of errors.

The other mistake is to suppose that the essence of drill lies in its unpleasantness. To hear some educationists talk about it, one would suppose that there was never a recruit who felt anything but repugnance for his drill. When people talk like that, I always ask them to tell me candidly whether there is anything which they ever really learnt when their whole selves, their minds and souls and wills, were rebelling against it. Personally I can think of no permanent mental or other acquisition which I ever made when my mind was in such a state of rebellion. One may, indeed, be reduced to submissiveness by the fear of punishment; but it is doubtful if things learnt in that way have really any permanent effect. The thing is not gripped, and is soon lost. It leaves little more impression of a lasting kind than the "lines" which are still, foolishly enough, sometimes set for impositions.

No one ever yet did any good, even at military drill, unless his heart was in it. He may get through somehow, but it will merely be a matter of pushing and pulling him through. He may be hustled along by his fellows in close order, but, unless all the time he has been thinking, observing, willing, for himself, he will be a sorry object when it comes to an attack in extended order, or independent firing. And, in like manner, the boy who has been "taught" languages only by accidence and verbal rules dinned into him with threats, will be worse than helpless when he has to express a thought for himself (if he has the power to form one) in any language, but more especially in his own.

G. K.

REST AND REFRESHMENT.

By S. P. B. MAIS.

MR. SAINTSBURY, in his latest critical work, very cleverly proves how necessary it is for those of us who pine and peek and fret amid the turmoil of our frenzied life to-day to go back to the eighteenth century for the sake of our peace of mind. We are only too apt to live for the newspapers, buying edition after edition in the hope of finding better news from all the various scenes of action. Our conversation runs in the everlasting groove of War and all its side issues; when work is over, and we are for a few moments at leisure, we either go out to a theatre or else plunge recklessly into a modern novel with its inevitable leading up to the climax of August 1914. How much better it would be if we could only uproot ourselves from our present age of agony in our hours of recreation and immerse ourselves in the placid waters of the Augustan lake.

No century has received more neglect than this one; no century ever deserved neglect less. From 1700 to 1798 is a period full of good things, all specifics for our present-day malady. It is just a case of having given the dog a bad name and the name has most unjustly stuck. It will therefore be, perhaps, a good thing first of all to clear the ground and state exactly what the eighteenth century set out to do; how far it attained its aim, what it did not pretend to achieve, and wherein lies the difference between our own

age and that of the earlier Georges. The whole century was given over to the cult of common sense; it viewed any tendency towards such a thing as *Enthusiasm* with suspicion; clarity of diction, sparkling wit, sound material-mindedness, &c., the avoidance of any exaggerated notions about idealism or other abstract "high-falutin" words, were conspicuously present in all its writers. Nothing could have been further removed from Shakespeare and Milton on the one side or the Romantic revivalists on the other. The field it set before itself to cover was a small one. The point to remember is that it covered it perfectly; it never failed to achieve its purpose, whether in prose, poetry, satire, the writing of letters, or the more gigantic feat of composing novels. It had no conception of "the desire of the moth for the star" theory, and Keats and Shelley were right outside its ken. It had no dealings with the sublime, and it descended but rarely to the ridiculous. There was a robust sanity about it which compels admiration at all times, and it was rarely dull.

Now, everyone will allow that the tendency to-day is all towards introspection, a state of continual hustle as we search after whatever chimera for the moment attracts us. Some of us believe (Mr. Saintsbury is not among the number; he seizes every opportunity to be rude to this fledgling century of ours) that the last few years have been extraordinarily productive of good poetry, lasting novels, and even of some signs of a sane dramatic revival. However that may be, the point rather lies in the fact that we have much to learn from an age when enthusiasm was regarded as a vice and the end of knowledge, the habit of moderating the passions. It is a truism that our best work is done when we are "calm, cool, and collected," as the *névrosé* doctors say. Most of us suffer from too highly strung nerves, and consequently splash our canvas with all manner of colours, careless of co-ordination, of shadows and lights, only pleased that such and such a patch looks beautiful. There is to-day a very noticeable lack of method, a kind of neurasthenic irritability in the work of even the best men, which indicates the need for a long rest cure among the Augustans. In a word, our enthusiasms, excellent in intention as they are, need the tempering that can only be gained by a course of Swift, Johnson, Addison, Pope, and the rest of a school who never suffered their passions to get the upper hand.

It is good for us to renew our acquaintance with Sir Roger de Coverley, Will Honeycomb, and all the adorable bevy of bepatched beauties—Chloe, Clarissa, Vanessa, Flavia, and so on, of the *Tatler* and *Spectator*; to turn over the pages of Addison's or Steele's *Essays*, and to watch Sir Roger at the play, in church, in Westminster Abbey, with the gipsies, at the Quarter Sessions—to enter again into that life where ladies are laughed out of their petty foibles and vain fancies, to read Addison's Saturday sermons or his criticism on *Paradise Lost*, interleaved with his sly reprimands to the oglers and street-criers, the antics of the fan-wavers and the members of the Trumpet and other clubs. It is all very quiet, always witty, never heavy or dull, and, what is most important, as different as possible from our life to-day. And after Addison, Swift. Miserrimus as he was in his own life, he never lifted the veil too far. It was, as he himself said, only mankind in the mass that he hated; individual members of society he loved, and, for all the carping of our more inane critics, *Gulliver's Travels* does stand out as one of the most humorous books ever written. Lacking, indeed, in the comic spirit must that man be who is unable to be tickled inwardly at the innumerable funny things in Lilliput and Brobdingnag, or intellectually fed with the amazing genius that went to the making of *A Tale of a Tub*. It is all part and parcel of the scheme of the century that Swift was so far able to control his passions that he could write so sweetly (yes, sweetly) that children are kept from their play by the delights of Gulliver and grown-up men and women can find refection in the finest satire that has ever been written. But it is to *The Journal to Stella* that we ought most surely to turn if we want comfort and rest. Here we have a slice of important history, a sketch of manners delightful in themselves, a gazette in miniature, mingled

pathos, humour and love, pride and jealousy, all written not in ink, but blood, making up a marvellous and absolutely genuine autobiography. It is doubtful whether, when we require pure recreation, there is any author so capable of gripping our attention and holding us as the man who wrote not only the above, but *The Polite Conversation*, *A Modest Proposal*, *The Drapier Letters*, and *The Battle of the Books*, to satisfy our aching senses.

Pope's place in literature has long been decided, but, because it has been granted that he is not a poet of the Wordsworthian order, it has somehow followed that he has been little read of late. We acknowledge his lack of originality, his insincerity and shallowness of thought, but his positive qualities more than outweigh these deficiencies. He is always witty, always polished and urbane, and never devoid of an intellectual quality that is not to be analysed, but is always felt and appreciated by all but the most meticulously romantic critics. The man or woman who fails to derive a very real pleasure from that consummately artistic mock-heroic epic, *The Rape of the Lock*, is sincerely to be pitied, while the *Essay on Criticism* and the *Essay on Man* sum up, in the most compact and charming style, aphorisms that have become the commonplaces of our everyday speech. The couplet about "true wit" is not the less valuable because it has suffered from too much bandying about. But we ought to re-read not only Pope, but the sunny, honey-tongued Prior, Gay, Akenside, Churchill, Thomson, and Young, all of whom contributed poetry of a kind that is at once direct, soothing, witty, and polished. For far too long have these poets suffered an undeserved neglect and been chastised for daring to be limited in scope and execution. They form a very definite link in the history of English poetry. If they did nothing else they knocked a real sense of regular rhythm into the English head, and for this alone we ought to be devoutly thankful. But it is when we arrive at the birth of the novel proper in Richardson, Fielding, Smollett, and Sterne that we stand on the surest ground.

I by no means agree with Mr. Saintsbury's estimate of our own age when he complains of the poverty of our modern novelists. Rather do I feel, after a new work of Compton Mackenzie, Hugh Walpole, Joseph Conrad, H. G. Wells, Arnold Bennett, Gilbert Cannan, St. John Lucas, and the rest of our younger writers, that we live in the golden age of the novel, but I readily acknowledge that, for pure rest and refreshment, I prefer Fielding, the innovator and perfecter of the direct narrative type of fiction. There is so much searching of heart, so much dwelling on sordid details in the novelist of to-day, that we become troubled and "nervy" ourselves after a dose of their work. Fielding, on the other hand, simply enchants us. We are not in the least perturbed by the many accidents by flood and field that befall Tom Jones or Joseph Andrews; we watch the rapidly moving events as if in a kinema. We are transported to an age in which we most decidedly would not choose to live, but which is still picturesque, real, robust, and full of sound common sense and good humour. Part-ridge and Parson Adams are an everlasting joy, and give us as much real rest and happiness as any of Shakespeare's characters. I am convinced that no better prescription could be devised for those who would forget for a few hours the woes of to-day than a course of eighteenth-century re-reading—not only all Fielding, *Pamela*, *Humphrey Clinker*, and *Tristram Shandy*, but *John Bunce*, *The Spiritual Quixote*, *The Castle of Otranto*, *Vathek*, *Peter Wilkins*, and *Moll Flanders*. All these novels are written with the one idea of amusing their readers and interesting them by excitement, suspense, pathos, sarcasm—by whatever means their authors could devise. That they succeeded for their own immediate readers is well known; that they are less read to-day casts an unworthy aspersion on our critical faculties. For the by no means to be despised gift of story-telling, this age has never been approached, and it is this lost art that we now so much deplore and so much need to comfort and console us in our leisure hours.

Lord Rosebery only echoed an opinion held by very many

cultivated men of taste when he declared that there was no bed book in the world to compare with Boswell's *Life of Johnson*, no other book which could compete with it as a solace for the convalescent. I myself can put on record that, when I had six months of forced indolence after a somewhat serious illness, Boswell was my constant companion, and contributed more than anything to my ultimate recovery. And, as everyone has pointed out, Doctor Johnson is the eighteenth century in epitome; no other age did or could produce him. In him is wrapt up all the Augustan splendid sanity—its intolerance of cant, its magnificent common sense (tempered in his case by a melancholy wisdom); its inimitable humour and avoidance of dullness; its direct vision, which has been mistaken more often than not for platitudinizing; its habit of saying outright what pleased and what displeased it, regardless of quaint rulings of other ages; its inflexible rigidity of principle, combined with a very real charity; its wide knowledge, which has no sort of affinity with pedantry; its curiosity, mingled with a wholesome scepticism; its indomitable courage, coupled with that mysterious charm which so many of us for so long a time have held up to ridicule or scorned as being too childish for these latter days of wisdom.

Doctor Johnson is John Bull as we like to fancy him, not as travestied in the weekly paper—superstitious, weak-kneed, maudlin, or scandal-mongering—but steadfast, robust, intellectual, religious, and not ashamed of being thought so; companionable, witty, and courteous (I repeat, courteous; think of the doctor's famous epigram to Mrs. Siddons or his treatment of the inmates of his house); and it is not only Johnson the man whom we meet in Boswell, but the Johnson of *The Rambler*, of *The Vanity of Human Wishes*, of *Rasselas*, of *The Lives of the Poets* and *The Preface to Shakespeare*; Johnson the writer, with whom Mr. Saintsbury would have us intimate. The legend that it is the man, and not the writer, who is able to afford us such a perfect rest and refreshment is utterly and radically erroneous. We ought to re-read his works as well as to listen to his inimitable remarks. I would go even further and suggest that we no longer deride Johnson as a critic. Within his very obvious limitations he is not only a good, but a great, critic. I know few more illuminating, and no more refreshing, pieces of criticism than his remarks on Shakespeare. That he disliked blank verse is very plain—he admits it; and, after all, every man is entitled to his own opinion. The question is, taking all his idiosyncrasies into account, whether or not he does shed light upon the works of the man whom he discusses. I answer unhesitatingly—yes.

Of Johnson's companions, Goldsmith, of course, stands out most prominently. For pure amusement and refreshment it would, indeed, be hard to name a more ideal companion. The most lovable of men in himself, his prose style has been the never-ending charm of all generations since; its perfect simplicity, its pellucid clarity, and light humour have been the envy of all writers since. It is impossible to analyse it; it is sheer gossamer. But it is Goldsmith's versatility that is so amazing. He will write you a comedy, over which even a schoolboy will shriek with delight as he reads it to himself; verses polished, descriptive, direct, and even poignant; essays for which we cannot find high enough praise; a novel which still pleases and amuses every reader of whatever age; and even histories of various kinds, which are a constant joy to anyone who is ever lucky enough to unearth one in a second-hand bookshop.

You can be sure of amusement, of absolute re-creation, and of perfect rest, whenever you pick up any one of the works of this astonishing Irishman. And so we come to a branch of literature which even the most blasé and "modernist" of the moderns will allow to be the eighteenth century's peculiar gift—the art of letter-writing. There must be something more than the modern restlessness and hurry, the invention of telephone and telegraph, to account for the rapid decay of this fascinating department of the kingdom of literature. Whatever the cause, it is an estab-

lished fact that never before or since in any age have we had letters to compare with those of Lady Mary Wortley Montagu, Swift, Pope, Horace Walpole, Chesterfield, Cowper, and Gray. What a magnificent orgy is conjured up by the mere mention of these names. We take up a volume of any one of them, and hours afterwards may still be found glutting ourselves with their witticisms, their pictures of the life and manners of their times, their delightful anecdotes, and the thousand and one things about them that attract us. Lady Mary, with her wonderful descriptions of life in Turkey and admonitions about her husband's prospects; Lord Chesterfield, with his never-failing Attic salt and acumen, trying to model a perfect man of the world; Horace Walpole (to me the most interesting of all, and to Mr. Saintsbury so important that he recommends these ten volumes as a "thirdsman" to the Bible and Shakespeare), with his abounding vitality and endlessly refreshing kaleidoscope of current events, portraying the history of his time more exactly than any historian could ever hope to; Gray, with his scholarly and scientifically inclined investigations, keeping his eye on the object like the true poet that he was; and Cowper, most popular of all, with his pen pictures coined from nothing at all, able to interest us quietly, sedately, yet withal amusingly, about Olney, his garden, or a hare, the most exquisite small-beer—all these afford us a garden with never-ending pleasaunces and arbours, to which we can retire with absolute certitude that we shall return to the whirl of our daily round reinvigorated, full of new ideas, all our tangled skeins unravelled, and quietly confident because of our new-found peace. And wherein lies the magic of these peculiarly eighteenth-century letter-writers? Is it not in the unfailing good sense, the inevitable good temper, the obvious leisured ease of the authors, and the genuine interest betrayed and aroused in all sorts of different things? Nowhere did the century find so natural an outlet for its genius as in this art, and to neglect these letter-writers is to miss a very considerable portion of the spice of life.

Of Gibbon and Burke, Mr. Saintsbury says but little; he recognizes the refreshing qualities of *The Decline and Fall*, but he by no means does justice to the gorgeous rhetoric of our noblest statesman. Lawyers invariably tell me that they always look on a man who doesn't know his Burke as only half-educated, and certainly I have derived more considerable æsthetic refreshment from the speeches on India, France, and America than in any writers of a like kind in any language. To some extent a novel depreciation of Sheridan has of late set in. There were better things written between 1700 and 1798 than his three plays, and critics wax angry because we don't read them; but that ought not to blind them to the fact that in their class these comedies stand alone, and have been the constant delight of all play-goers and readers ever since. No one in his senses would deny that he gains a very definite sense of rest and refreshment after seeing or re-reading the comedies of Sheridan or Goldsmith; the stage, without these two in this century, would have been poor indeed. But all this time there has been an undercurrent of revolt against the tenets of the Augustan school; *The Fugitives from the Happy Valley* were headed, of course, by Gray and Collins, who, in spite of their personified abstractions, handed on a very definite torch to Wordsworth himself.

Collins, in particular, had that peculiar dream quality, that touch of pure lyrical softness, which haunts us in the later romantics. He at least breaks with a school which aims at neatness and polish and common sense above all else. *How Sleep the Brave* and *The Ode to Evening* need no relative eulogy; they are absolute, final, ineffably graceful and sweet. Macpherson's *Ossian* is, I fear, still caviare to the general, but its popularity and influence were once widespread throughout Europe. The point is that this verse-prose, with its breath of the blue mountains of Skye and the Hebrides and magic vagueness, shows yet another cleavage from the school of Pope. But it is when we come to Percy's *Reliques* (1765), the most epoch-making book that

appeared between 1700 and 1798, that we see the first real glimmerings of the great dawn of the Romantic revival. How good it must have been for the eighteenth century to read *Sir Cauline*, *Sir Patrick Spens*, and *The Nut Brown Maid*. It would, we feel, have been worth while to have lived at that period, ordinarily ignorant, and suddenly to have come across a copy fresh from the press. No wonder Scott raved so about it. I never met any one, boy or man, who was not in raptures over it when it was first brought to his notice.

It is difficult to analyse the charm which ballad poetry exercises over us; the fact remains that we would part with many precious heritages before we would consent to lose *Chevy Chase*, *The Battle of Otterbourne*, *Young Waters*, and so on. It is hardly necessary at this time of day to recommend people who are in need of rest and refreshment to go back to the ballads, but it is worth noticing that it is to the eighteenth century that we owe its revival and consequent popularity. Chatterton's *Ballade of Excellent Charity* and Smart's *Song to David* will never fail to provide restful pleasure to all who have eyes to see and ears to hear, but their place at this time of day is also well assured. And so we arrive at the setting of the Augustan Sun. Cowper, almost as versatile as Goldsmith, we already know as a letter-writer. His hymns stand out as the finest we possess, his *John Gilpin* and *The Task* scarcely need mention here, but it is perhaps permissible once more to draw attention to the importance of *Yardley Oak*, which certainly contains matters entirely foreign to the earlier writers in the century. Here we have the imaginative envisagement of everything, the half-pantheistic feeling of the community of man and Nature and God, which is so perfectly developed later on in Wordsworth. In all his poems, however, there is the same peacefulness and quiet humour which are so necessary for those in search of rest.

We feel, on laying down *The Peace of the Augustans*, that Mr. Saintsbury has conferred upon the State a real benefit, for there never was a time when we all of us so sorely needed all that the eighteenth century has to give us—level-headedness, a sense of humour, a sense of quiet, even though oppressed and weighed down by innumerable troubles; robust strength, an avoidance of thinking too precisely on the event—all these and many more are the gifts which this age has to bestow. It is all the more difficult when we feel so grateful for such a piece of criticism to have to comment adversely on many features, but, in common fairness to ourselves, a word must be added on the reverse side.

Never before can there have been such an astute literary critic who wrote so deplorably as Mr. Saintsbury. His style has long been recognized as almost as bad as his criticisms are good, but in this book he has "out-Saintsburiated Saintsbury," which must weigh with University lecturers before they take the responsibility of advocating this book as a textbook of criticism. Furthermore, he is a Tory of the Tories, and obviously prefers a political fight to all the literature there ever was. Like many others of his belief, he is unable to understand the moderns, and consequently reviles them most unjustly. Lastly, and most important of all, we close this book with a feeling that he himself does actually prefer the low-lying levels of the Augustan poets to the sublime heights of Keats, Shelley, and Wordsworth. We feel that we have been cheated by a very clever counsel, who insidiously recommends that, for our sanity's sake, we should try his prescription of eighteenth-century literature; and, when he has us in his clutches, he would have us leave all our glories of sea and sky and mountain, and stay with him in this field of very limited vision for ever.

The clever reader will take Mr. Saintsbury's advice gladly for a cure, but, when he is rested, he will rise again like a giant refreshed with wine, and come back to the present age ready to fight afresh for the new ideals and the twentieth-century theory of life and letters, which any one less biased than Mr. Saintsbury will allow are incomparably finer than those of the nineteenth and totally beyond the ken of the very earthy schemers of the eighteenth century.

THE PHILOSOPHY OF MYSTICISM.

RELIGIOUS mysticism, says the Dean of St. Paul's in his Bampton Lectures on *Christian Mysticism*, may be defined as "the attempt to realize, in thought and feeling, the immanence of the temporal in the eternal, and of the eternal in the temporal." The philosophy of mysticism seeks to find a rational basis and justification for mystical experience. It passes behind feeling and the immediacy of experience to thought, and endeavours to defend the rationality of religion and the validity of its continuous advance, until it culminates in the mystic's awareness of his identity with the Absolute or Perfect Experience. It is a high mountain air which the philosophical student of mysticism must breathe. You cannot defend the monistic or absolutist position against materialism, pluralism, and pragmatism without a discussion of difficult philosophical problems, which the man in the street is apt to regard as so much meaningless jargon. Yet philosophy is only deeper thinking upon the problems of common life; and if this thinking can be set forth in plain and lucid language many will feel the attraction of a world of ideas, which now seems to lie entirely beyond their ken.

Such a lucid exposition of the philosophy of mysticism has, we venture to think, been recently made. In Mr. J. H. Tuckwell's *Religion and Reality** we have an admirable exposition of the meaning of philosophical mysticism, which we hope many will read. In its technicalities are reduced to a minimum, and the writer shows himself to be possessed of a remarkable power of making his argument clear. We propose, in this article, to give some account of the book. In explaining his own creed, Mr. Tuckwell crosses swords with many redoubtable antagonists, chief among whom are Bergson, Bradley, and the late William James. His criticisms of opposing systems are some of his best work. In reading them we feel that we are dealing with a writer who is a thorough master of his subject, and has lived himself into his philosophy. Indeed, life and not logic may be said to be the cardinal principle of his thinking, but it is life which is informed by an immanent logic or rationality, and not the illogical life of pragmatism. Mr. Tuckwell takes his stand on reality, on concrete experience, and distinguishes sharply between the verbal logic of the schools and what he calls the fundamental or genetic logic of real life. Bradley, for example, will not allow the validity of the idea of a unitary self, because he finds the self to be not one but many, and James agrees with him. For these thinkers the self is composed of varying moods and tendencies, which make, indeed, somehow a stream of consciousness, but cannot be reduced to any satisfactory unity. Mr. Tuckwell, rightly as it seems to us, brushes aside these objections as "the cobwebs men have spun," and boldly takes his stand on the plain fact of experience that we know we are unities. The self of each man may include "the self of ambition, the self of avarice, the self of fatherhood or motherhood, the æsthetic self, the combatant or militant self," but all of these spring from one deep root, all are the expression of a living unity which lies below their seeming differences. If man is thus "one in many" or "many in one," have we not in that fact a ground from which we may rise to the conception of the Absolute or Perfect Experience as the supreme example of plurality in unity?

It will be apparent that the author is stoutly opposed to any materialistic interpretation of life, but presses to the full the claims of vitalism. Vitalism has come again to its own in the development of scientific thought; but we can hardly wonder that many men of science look askance at it; for an appeal to some mysterious vital force in organisms is an appeal to the unknown, and it is the object of science to explain the world in terms of the known. At the same time, it is doubtful whether biology has not hindered its own ad-

* *Religion and Reality*. A Study in the Philosophy of Mysticism. By J. H. Tuckwell. (Methuen, 7s. 6d. net.)

vance by a too rigid treatment of organisms in terms of molecular physics. The problem reaches its height when you are dealing with heredity. Mr. Tuckwell writes as follows:—"When treating of heredity, therefore, in any attempt to explain its special phenomena, recourse must be had to the psychical or spiritual side of living organisms; that is to say, we must endeavour to find in some facts or principles of conscious experience the explanation we desire. We conclude, then, that heredity has its real ground and explanation, not in any chemical or mechanical changes and activities of the germ plasm, not in any merely physiological process, but in conscious experience." We are driven, he says, to "suppose a sort of racial self, or at least some larger, more enveloping consciousness, where the memory of the past is stored and accumulated." This provides a fund upon which the individual draws, and is the basis of the possibility of progress.

We desire specially to commend the two chapters in which the writer treats of religion in relation to the evolutionary process. His line of argument we can, however, here only indicate. It is this. If we are right in regarding heredity as racial memory, and if, as James and Fechner have maintained, there really exist other and larger selves or consciousnesses, may we not go on, indeed must we not go on, to postulate the existence of the Absolute, the one all-inclusive life or experience, in which all lesser experiences find their unity and reconciliation?

The final object of religion is to reach the Absolute. Evolution shows, and Bergson has emphasized the fact, the existence in all life of an *élan vital*, an impulse towards advance; or, as Browning has put it,

All tended to mankind,
And, man produced, all has its end thus far :
But in completed man begins anew
A tendency to God.

The culmination and completion of this process is the experience of the mystic, who finds himself one with the Absolute. Genuine mystics are few and far between; but just as a "mutation," or large variation, suddenly appearing may lift the whole level of the life of a species, so the religious genius, *rara avis* though he may be, may be regarded as the herald of the future evolution of the race. The author deals at some length with two problems. The first is the possibility of the finite self realizing its oneness with the Absolute without being so merged in it as to lose its identity. Mr. Tuckwell appears to us to have made out a good case against the doctrine of absorption. The second is the problem of how we may best picture to ourselves the perfect experience of the absolute. Here we are bidden to consider the creative genius in art, whose creations are the self-expression of his inner nature. "The Absolute must be conceived as a self whose all-inclusive perfection consists in the activity within him of a perfectly harmonious, immediate, and creative experience, of the nature of what we term emotion, an immediate experience that is perpetually exfoliating into all the universes of time and space." God cannot be thought of as a mechanical contriver, as Kant made plain; but we can think of Him as a creative artist without finding ourselves confronted with insuperable difficulties. In artistic emotion thought and feeling are blended into an immediacy of experience, and it is this immediacy which gives us a clue, however inadequate, to the nature of the perfect experience. The metaphysician will be grateful to Mr. Tuckwell for his clear exposition of the need of metaphysics, if religion and ethics are to be securely based. A sane and sound view of ultimate reality can never be reached by the road of psychology. But he will also ask of him a further treatment of the problem of human freedom in its relation to the Absolute. If the volume reaches a second edition we hope that the author will add a chapter dealing with this very crucial question.

There are not a few who, like Tennyson's Ulysses, yearn "to follow knowledge like a sinking star, Beyond the utmost bound of human thought." Such may well do worse than take Mr. Tuckwell with them in their spiritual quest.

REVIEWS AND MINOR NOTICES.

Homer and History. By WALTER LEAF, Litt.D., D.Lit.
(12s. Macmillan.)

Mr. Leaf's new contribution to Homeric studies, which was first made public in the form of a series of lectures delivered at North Western University, Illinois, is a natural continuation of his work on *Troy and the Trojan Catalogue** which appeared several years ago. In both books he is concerned with the historical element in the Homeric story, and he tests it in each case by a searching examination of particular portions of the epic; but the results he reaches are strikingly different. He had accepted the *Trojan Catalogue* as a substantially correct gazetteer of the Black Sea Straits in the "Heroic Age," at a time before they had passed under the control of Greek colonists and traders; on the other hand, the catalogue of the ships (*Βοιωτία*, the latter portion of *Iliad*, Book II), which purports to be an equally genuine muster-roll of the Achaean host, is exposed in his present study as a fake—a clumsy attempt to force Homeric Greece into a later mould, and impose upon a non-tribal society the tribal parochialism of the forger's own age.

This exposure of the Greek Catalogue is the groundwork of the book. It is conducted with extraordinary vigour and acumen, and will carry conviction to almost every student of the Homeric Question. Even the most credulous will be shaken by the *reductio ad absurdum* of the "Thessalian Baronies" in Chapter IV—the most brilliant passage in the whole critique. In reading it, we have the feeling that a permanent step forward has been made; but we cannot feel the same about Mr. Leaf's constructive efforts to fill the blank, which the discredited Catalogue leaves behind, by a cento of data gathered indiscriminately from the remainder of the Homeric corpus.

In Homeric controversy there are, of course, two main schools of opinion—"unitarianism," which clings to a single author producing the epics by an individual act of creation; and a "pluralism" that regards them as essentially the work of many hands, created by innumerable generations of corporate tradition. Mr. Leaf is avowedly of the latter persuasion; and yet his method of reconstructing the historical geography of the "Heroic Age" seems fundamentally incompatible with it; while, curiously enough, the thesis advanced by that arch-unitarian, Mr. T. W. Allen, which gave the actual provocation to Mr. Leaf's destructive and victorious attack on the Catalogue, might quite well be accepted, on *a priori* grounds, by the most advanced professors of the pluralist creed.

Mr. Allen treats the Catalogue as the fragment of a chronicle or other historical document, dating from about 1200 B.C., and embedded in the Epos as the Gazetteer of the Royal Road and Xerxes' Army List are embedded in Herodotus. It makes no real difference to this hypothesis whether the Epos itself is a single deposit or a succession of strata—in fact, the geological analogy would more readily suggest the latter idea. It is a hypothesis perfectly permissible to the pluralist, and not only so, but it is surely the only conceivable hypothesis which could reconcile his standpoint with the notion of Homer being historical at all.

A hard, compact fossil may survive the evolutionary process and emerge in the final Homeric stratum in perfect preservation, with the very outlines it possessed before ever it was engulfed in the Epic's plastic, unstable clay. But if your one precious fossil is proved a fake, what other untransformed relics can you reasonably hope to disengage from Homeric soil? Mr. Leaf proves too much. The more we are convinced by his criticism of the Catalogue, the less we shall trust him when he offers us a concordance of the remainder of the Epic in the Catalogue's place. A century of Homeric study has surely established this general truth—that, in a field where the data are so scanty, it is fatally easy to harmonize and combine, and extraordinarily difficult to detect those significant

* *Troy: A Study in Homeric Geography.*

discrepancies which illuminate the structure of the whole Epic, and are more fruitful of knowledge than the most diligent joinery. The original evolution of the Epic (on the pluralist's theory) was a masterpiece of harmonization, and ever since this evolution ceased, still more ingenious harmonizers have been at work upon the text, from the now convicted author of the *Bowria* to Thucydides and Strabo (whose isolated and undocumented statements Mr. Leaf is perhaps too ready to exploit *au pied de la lettre*) right down to Mr. Allen and—Mr. Leaf himself.

So much for truth or falsehood in the details of Homeric historical geography. But even if we are reduced to agnosticism regarding the minutiae, we may still hope to conjure out of the Epic some general picture of the age or ages during which it was evolved, and especially of the particular social and historical factors which gave the original impetus to its growth. There is a general agreement among all sects of scholars that Homer was born of a "Wandering of the Nations," but there are two possible sets of circumstances in which this marvellous birth may have occurred. The Epic may have originated, about 1500 to 1200 B.C., through the infiltration of an "Achaean" people from Central Europe into the peninsula of continental Greece, and so claim Europe for its cradle; or it may have been conceived, a stage later, in the settlement of seafarers from Greece upon the Aegean islands and the opposite Anatolian coast, and have come to blossom in the city-states of Asia. Mr. Leaf declares for the former alternative—"The Achaean Epos" is the uncompromising title of his eighth chapter. We have no space here to marshal the arguments on the other side; but, as Mr. Leaf confesses to the same admiration as we ourselves feel for Prof. Chadwick's *Heroic Age*, we may perhaps be allowed to turn against him the Teutonic analogy by reminding him that Norse Saga was bred in Iceland, and not in Norway, and by referring him to Miss Philpotts' book on *Kindred and Clan*. Miss Philpotts examines, in the Teutonic World, the very subject Mr. Leaf is studying in the Heroic Age of Greece—the survival-power of tribe and kin—and her general conclusion is as follows: the kin-system persists unimpaired through even the most distant migrations by land, but is shattered by a relatively short migration across the sea; it died hard in Denmark and Norway and Northern France, while it vanished almost without a trace in Iceland and England. This analogy suggests that the non-tribal society, which Mr. Leaf so acutely divines in the "heroic world" of Homer, does not reflect the life of a transitory mainland empire at Mycenae, but the novel and enduring environment of Ionia across the sea.—A. P. T.

An Introduction to the Economic History of England.

By E. LIPSON, M.A. I: The Middle Ages. 1915. (Black.)

While discussing many difficult problems, this volume is easy and pleasant to read. It is written with a clarity and preciseness which bespeaks a mastery of its various subjects; it is well arranged, and its conclusions are supported by a wealth of proofs derived from records which bring vividly before us pictures of medieval life, and stimulate and guide the imagination. Beginning with the Manor, Mr. Lipson observes that there are indications that the early English settlements were not of the manorial type, and that there was a transition from free to servile cultivation. He examines the status of the villein and of men of an inferior condition, cottars and bordars, in whom he finds the appearance of a wage-earning class "destined eventually to supersede villeinage, and become the economic basis of modern industrial society." He explains the working of the open field system, and notes the communistic element in husbandry which did not extend to the ownership of the produce. While he by no means extenuates the economic effects of the Black Death in disintegrating the manorial system, he shows that it accelerated, rather than originated, the commutation of praedial services which was already in progress, and that the villein insurgents of 1381 did not revolt against oppression, but in order to obtain the freedom enjoyed by their fellows, and that they were

in a position which encouraged their hopes. Serfdom was slow in dying out altogether. It is strange to read that as late as 1586 a mayor of Bristol, then the second city in the kingdom, was claimed as a serf. During two centuries—1300–1500—the old agricultural system was gradually transformed; capital was used to create large tenancies, and enclosures destroyed the old village communities. Mr. Lipson distinguishes between the different processes of enclosure: in some cases it meant improved husbandry; in some it was accompanied by adequate compensation to the commoners; and in some was cruelly unjust.

In dealing with town life he tells us that he considers it impossible to determine what the customs were that were derived from those of Breteuil, so often referred to in our town charters as a standard of privilege. An interesting chapter on "Fairs and Markets" lays before us an important side of medieval life, and contains some information on various unfamiliar points, such as the suspension of the ordinary municipal authority during fair time and the pie-powder court. The mercantile privileges of towns were generally vested in a merchant gild, which seems to have been a post-Conquest institution. At first this gild was generally not identical with the burghal polity, and was, indeed, essentially different from it, though the municipal government and the regulation of trade finally fell to a single body. The monopoly of trade within the borough was claimed by the merchant gild for its members. On this monopoly, as our readers will remember, Dr. Gross insists, but as the burgesses of many boroughs possessed by charter the privilege of free trade within the kingdom, Mr. Lipson is certainly right in maintaining that the monopoly of the gildsmen was often "more nominal than real." Although the primary function of the Craft Gild was to control the industry of its members, it influenced every side of their lives; while it insisted on good workmanship, which may, as is suggested here, be connected with the prohibition of night-work—though other reasons for the prohibition, such as a dislike of extreme competition, seem to us at least as probable—it regulated wages, provided for religious observances, arranged amusements and festivities, dispensed charitable relief, and settled disputes. Some of these gilds admitted women to membership: among them the barber-surgeons of London and the silk-workers.

In some instances these gilds were for a time strongly opposed by the burgesses who regarded with natural jealousy the rise of bodies rich enough to purchase charters and able to win for themselves an exceptional position. This was the case with the weavers of London, the root of the trouble between them and the merchant gild being "not that the merchant gild wished to exclude the weavers, but that the weavers refused to be brought within the merchant gild." It is a common mistake to connect the gild system and trade unionism, and Mr. Lipson's remarks on the essential differences between them are therefore peculiarly valuable. The appearance of yeomen or journeymen gilds marks a change to a new condition of industry, which saw the growth of a permanent class of wage-earners able to occupy their craft but without the means to do so to their own advantage. As capital became a more important factor in industrial development, crafts were grouped together into one company, the difference between the trader and the manual worker became stronger, the trader gained control of industry, and the difference between him and the workman was exhibited by his wearing the livery of the craft, to which, in earlier times, all who followed it had a right, but from which the workman was now excluded. After summing up the merits and defects of the gild system, Mr. Lipson observes that we owe to it the admirable institution of apprenticeship and "the ideal of technical training and sound craftsmanship."

The history of the greatest of our industries in medieval times, the manufacture of cloth, is treated in a separate chapter. This is followed by an excellent account of our foreign trade. In the treatment of alien traders the interests of the King and the land-owning class, who, in order to purchase cheaply desired to buy of the foreign importer, conflicted with those of the native traders, who wished to

keep internal markets for themselves and to confine the foreigner to the carrying trade until they were themselves able to engage in it, and Edward I is credited here with a deliberate attempt to break down the monopoly of the privileged borough by allowing aliens, by the *Carta Mercatoria*, a large measure of commercial freedom for which they had to pay handsomely in customs. Much information will be found here as to the part played by the staple system in the regulation of commerce, the collection of revenue, and the maintenance of a standard of quality, while its importance in diplomatic arrangements is also briefly noted. It must not, however, be imagined that English merchants, even in very early times, left the carrying trade wholly in the hands of aliens. Mr. Lipson proves that even in Stephen's reign there were burgesses of Newcastle who carried their merchandise in their own ships, and that the merchant adventurers at an early period acquired a privileged position. A long rivalry between them and the merchants of the Hanse ended in Elizabeth's reign in the victory of the native society. A short chapter on the Exchequer and the Royal Revenue, in which full advantage is taken of the latest and best authorities on the subject, ends a volume of exceptional interest and scholarly research.

The Peace of the Augustans. By GEORGE SAINTSBURY.
(8s. 6d. net. G. Bell.)

The volume contains but a passing reference to the War, yet it promises to provide what many authors, original and compilers, native and foreign, have essayed in the course of the last year, a harbour of refuge from the storm and stress of the times. The eighteenth century is indeed a happy hunting-ground, and Mr. Saintsbury has already explored in detail its criticism and its novels. To speak of the age of Anne and the Georges, of the War of Independence, and the French Revolution as an age of peace is indeed paradoxical; yet, as a contrast to the succeeding age of Romance and the present age of Science and Introspection, its literature may be termed restful. Mr. Saintsbury knows its literature as few living writers do, yet we may doubt whether he is fully qualified for the task he has undertaken. He is singularly lacking in that directness, ease, and clarity which distinguish one and all of the authors to whom he gives his imprimatur. He is nothing if not epigrammatic and allusive. He thinks, as it were, aloud, and sets down *tout ce qui vient au bout de la plume*. It is, in fact, though he denies the impeachment, "a talkee-talkee book," though not "a series of gossiping sketches of persons and manners." To him it is the form, and not the matter, that signifies. Wherever we approach grave subjects such as history and philosophy, he flies off at a tangent or lets us down with a platitude. Gibbon is, of course, a prince of historians; defective as he is, Hume is vastly to be preferred to S. R. Gardiner. Everyone will, of course, read Berkeley's *Alciphron* and *Tar-water* again and yet again. Adam Smith was perhaps worth reading in his day, though he has generally been misread. And so we pass on to the one philosopher deserving a gentleman's serious study, Abraham Tucker.

Mr. Saintsbury once possessed Tucker's works in ten (or was it twenty?) volumes, and he looks forward to repurchasing them as a solace for his old age. Sir Leslie Stephen had the impertinence to call him "half-trained," and Hazlitt, to fill the cup of his iniquities, dared to abridge this prince of humorists. All this is amusing enough, but hardly what one expects in a serious history of literature.

But the centre of the volume is Swift, and on him are expended all the flowers of learning and rhetoric. *Gulliver's Travels*, we are told, is at once the most amusing story and the greatest satire of all the ages. Far be it from us to decry or depreciate the most remarkable man of the age; yet it should in fairness be pointed out that the *Gulliver's Travels* which has delighted generations of children is but a fragment of the whole work, that the later parts were too repulsive for times that swallowed without a qualm *Tom Jones* and *Tristram Shandy*, and, lastly, that the political

satire is dead and buried while that of Aristophanes is immortal.

We do not ask, indeed, for "chatter about Harriet," yet surely in any estimate of Swift it is all important to form some opinion as to whether he was married or not to his Stella, and, admire as we will the marvellous *Journal*, we cannot regard it as the "first great novel writ on the red-leaved tablets of the heart." On the famous "Only a Woman's Hair" we need something more than Sir Henry Craik's sapient comment: "It is for each reader to read his own meaning into them." And it shows very limited critical powers to contrast with Swift's *Journal* to *Stella* Rousseau's *Confessions* as "drenches of maudering pose and rancid sentimentality of a hopeless cad," and Goethe, in his *Wahrheit und Dichtung*, as "a cultured but rather priggish snob." Far soberer and truer, in our judgment, are Thackeray's estimate of Swift in his *English Humourists* and Prof. Nichol's in Ward's *English Poets*. It is characteristic that the name of the editor should be misspelt, but Prof. Saintsbury has probably forgotten his contributions to that admirable anthology, and more probable that he has not had the curiosity ever to read one of Mrs. Humphry Ward's popular novels.

Nothing is farther from our intention than to run down Mr. Saintsbury as a critic, only we warn our readers that they must not expect such a history of the Augustan Age as they will find in Henry Morley or Taine, or other accredited historians. We shall not quarrel with his aggressive Toryism if he rail against Macaulay as an ignorant and conceited Whig (the name occurs twenty-two times in the index), considers that the only true theory of education is that of Solomon and Orbilius, and selects Darwinism and *Essays and Reviews* as a summary of modern religious thought. But we do complain that the volume does not fulfil its primary intention, and give us the rest and refreshment that we seek in the present age of discontent. This is not to be found either in the wit of Pope or the manly common sense and loveliness of Johnson and the geniality of Goldsmith, or the exquisite simplicity of Cowper, the herald of a better age. As far as this book is concerned, Mr. Saintsbury is an unconquered Canaanite. In his heart of hearts he ranks Pope's *Essay on Man* above Wordsworth's *Ode on Immortality*, and in commending Collins's *Ode to Evening* he "hungers and thirsts for rice."

It was in 1850 that Matthew Arnold, in his *Memorial Verses*, told us that never had such soothing voice passed to the shadowy world, that never again in her weltering strife could Europe hope to find Wordsworth's healing power; and it is to Wordsworth or to the singers of an elder day, not to the Augustans, that we turn for peace.

The Revolutionary Period in Europe (1763-1815). With Eight Maps. By HENRY ELDRIDGE BOURNE. (7s. 6d. net. G. Bell.)

This is the best handbook which we have seen upon the Revolutionary period, and, with some reservations, we think that it may be described as the most helpful introduction to the new literature which has appeared in recent years. The work of Sorel, Aulard, Vandal, and many others has meant nothing less than a great revival in historical scholarship. Anyone who has kept in touch with the historical periodicals of France and Germany knows how much fine work has been done upon the inner history, and especially the "social" history of Revolutionary and Napoleonic Europe. Prof. Bourne has mastered the best of this work. His book is not brilliant nor particularly well written. It runs smoothly, but is essentially a handbook. At the same time it is clear and concrete. Full of detail, it will not be wearisome to those who are patient enough to realize the significance of detail.

Mr. Bourne has been ambitious. He has tried to write a political history of the most formative period in history from the economic and social standpoint. So far as we can see, he does not wish to dogmatize upon the interpretation of history, but he is under the influence of the latest work, and is most interested in the condition of the people, the course of legislation and economic policy, and the creation rather than

the growth of institutions. These preoccupations are excellent, but they have imposed limitations—a fact which teachers who use the book should not forget. We think that Mr. Bourne may have been encouraged to adopt this point of view more whole-heartedly than he might otherwise have done by instructions upon the geographical scope of his work. For example, he has apparently been told to omit American history, and has observed his instructions with an American respect for the claims of specialism. In consequence, although his history professes to cover the years 1763–1815, there is hardly a single reference to the great European War which arose out of the War of American Independence and closed in 1783. It is almost incredible, but it is the case, that the important Ministry of Vergennes, who, by separating French interests from those of Austria as well as of England, defined a national policy which was accepted by the Revolution, is passed over in complete silence. The work done by Sorel in the first volume of his book on *Europe and the French Revolution*—an epoch-making volume, if ever there was one—is disregarded by Mr. Bourne. And, having made this false start, he has not been able to recover a more balanced point of view.

Two sentences contain the only allusions which we can find to the Treaty of Versailles and Vergennes. They are these: "The eighteenth article of the Treaty of Versailles in 1783 had pledged the two countries to rearrange their commercial relations within two years. Before the Treaty was signed . . . Vergennes, the French Minister of Foreign Affairs, had written to his agent in London: 'One does not get rich from very poor nations.'" The saying has considerable interest, but could there be a better example of the disbelief in foreign policy as an expression of historical movement, as a real factor in history, than this solitary reference to Vergennes written on the eve of the war of 1914?

Apart from this ground of criticism, Mr. Bourne describes the Revolution exceedingly well. As he proceeds he becomes more animated, and, when he writes the history of Napoleon, he finds less difficulty in displaying, under the unifying guidance of the conqueror, the many-sided movement of the Revolution. We have never seen in a few pages such a good and clear account of the economic state of Europe, the status of the peasantry, the significance of benevolent despotism, the enormous legislative and administrative activity under the various constitutions of France, and the domestic policy of Napoleon. The treatment of the depreciation of the assignats and of the "Continental system" is particularly interesting. Only on one theme does Mr. Bourne cease to write forcibly and fail to give the impression of having seen what he writes. The occasional excursions into what is called "literary history" have a meaningless fervour—convey a sense of inevitable irrelevance—only too common in historical textbooks. There at last we find our America.

A Handbook of Greek Sculpture. By E. A. GARDNER. Second Edition, complete in 1 vol., and revised 1915. With Illustrations. (10s. Macmillan.)

Prof. Ernest Gardner's *Handbook* has been for twenty years the most useful manual current in this country on the subject of Greek sculpture, and its merits are sufficiently well known. During that time excavations have furnished much additional material, and research has led to the modification of former judgments. Such new matter was treated in appendixes added from time to time to the original work. These have now been incorporated into the text in proper historical sequence. The chapter on Early Art has been enlarged by a reference to the Cretan discoveries and the problems to which they give rise; the art of Lysippus is reconsidered on the basis of the Agias statue; the position of Damophon and the Cerigotto "finds" are discussed fully; the section on the Aeginetan marbles has been rewritten in the light of the discoveries and proposed reconstruction of the late Prof. Furtwängler. Alcamenes receives fuller treatment in connexion with the "Hermes before the Gates," a copy of which was found at Pergamum, and the now famous "Charioteer," discovered at

Delphi, is discussed in its relation to Attic art of the middle of the fifth century and that otherwise rather shadowy personality, Calamis. On all archaeological questions Prof. Gardner may be trusted to weigh the evidence, to present it fairly, and to draw reasonable conclusions. For æsthetic judgments there are few positive canons, and if the study of art is to be of any value, no student should be ready always *iurare in verba magistri*. If the estimates given of artistic value seem at times predetermined or biased by archaeological considerations and the question of date, that will often be found due to the natural predisposition of art historians to insist too strongly on tendencies, and to allow too little to the possibilities and waywardness of genius.

The illustrations may be as adequate as considerations of space and the limitations of photography allow. They bear no relation in their size to the scale of the originals; they often suffer from the defects of the medium, as when slight imperfections in the object, as weather-stains in marble, are exaggerated so as to obscure, or even spoil, all the beauty of form and line. It is probable that in many cases photographs from properly lighted casts would give a truer effect. The Hermes of Praxiteles might have been given as he now stands, with legs restored; the fine figure of Alexander, from the great sarcophagus, ought certainly to be included. The plate of Carrey's drawings is too indistinct to be of use; the source of the reconstruction of the Lycosura fragments should be stated in the text.

The issue of this book at this time suggests melancholy thoughts. German scholars since Winckelmann have been unwearied in their patient application of scientific method to the problems of classical archæology, and they stimulated the healthy and fruitful rivalry of other Western scholars. That rivalry has yielded perforce to the deadly rivalry of nations. The young students who should be debating these problems in the lecture-room are debating life and death in the trenches, whence, alas! too many will never return.

Towards a Lasting Settlement. Edited by CHARLES RODEN BUXTON. (2s. 6d. net. Allen & Unwin.)

If there is one counsel that more than any other needs enforcing it is *Audi alteram partem*. To many the very names of the editor and of the chief contributors—G. Lowes Dickinson, J. A. Hobson, H. N. Brailsford, and Philip Snowden—will act as repellants. They will all be lumped together as Pacifists, and on that score be refused a hearing. Against all of them may be quoted words of unwisdom, if not of folly, and we should not be prepared to endorse without reservation these calmer and more temperate utterances of any one of the essayists. Yet there is nothing in the volume to damp or discourage the present temper of the nation, the universal resolve to quell the aggressor—not only of English liberties, but of all national independence—or die in the last trench.

Mr. Frederic Harrison and the extremists on the other side bid us pocket all our principles till the War is over. If this means only that Unionists and Nationalists, Conservatives and Radicals, Capital and Labour, Protectionists and Free Traders, must sink for the time their differences, he is preaching to the converted; but if he intends to denounce as treasonable any attempt to probe the ultimate causes of the War, and consider what terms of peace we should be prepared to accept, and what reforms, both national and international, we should aim at, we hold that there is no time like the present. If the matter has not been thought out before the close of the War, we shall find ourselves landed in another Berlin Congress, and statesmen will again return, each to boast at home that he has brought back "peace with honour." Perpetual peace may seem no nearer than when Kant wrote his famous tract, but it will be a Pyrrhic victory unless the victors are agreed, and prove by their action that this is their ideal, a federation of the free nations: not a crushing of Germany and her Allies, but a taming of the Prussian spirit; the spirit of Thrasymachus in Plato's *Republic*, of the Rob Roys and swashbucklers of all ages. Let England frankly acknowledge that she, too, has sinned in the past; that she, too, has waged wars of aggres-

sion, and gloried in her bold buccaneers. At any rate, she embarked on this war with clean hands and with no ulterior object, as the defender of right against might, of the weak against the strong. These essays unduly magnify her past failings, but they are an honest endeavour to "see ourselves as others see us," as neutral nations will regard us when the War is over. It is as a democracy that we shall make peace, not as a *Weltmacht*, but as a federation of free nations. In this we are all agreed, however much we may differ from the sentiments of Mr. Philip Snowden. Could Germany, even were she unmuzzled, make the same profession of faith?

The Middle Period of European History from the Break-up of the Roman Empire to the Opening of the Eighteenth Century. By JAMES HARVEY ROBERTSON, Professor of History in Columbia University. (5s. Ginn.)

A pleasanter manual of history than this little book, or one which for its size is more likely to help teachers to make their instruction interesting, we have seldom met with. It does not, of course, contain many details of political history, though it deals broadly and well with the principal events and changes which have affected the States of Western Europe during some thirteen centuries. Its main object is to describe how people lived, how they were governed, what they thought and believed, and how they built. The treatment of so many and such large topics is necessarily slight, but is good so far as it goes, and it presents evidences of wide reading. The volume is furnished with several maps, some of them coloured, and a very large number of other illustrations, those of famous buildings, with little descriptive notes appended, being especially useful. When describing the main characteristics of romanesque churches, Prof. Robinson was perhaps prevented by considerations of space from saying that side aisles are by no means a universal feature; there are several romanesque churches of large size in France without them, especially in Provence, as at Avignon, Carpentras, and Cavaillon, and where the roof is domical as at Fontevault, Angoulême, and Cahors. It is well pointed out here that the introduction of the "Gothic" style was due to a problem in the construction of vaulting. The author is not so happy in his short notice of the nature of tithe. On the other hand, it would be impossible in an equally small space to improve on his statement of the religious attitude of Erasmus. The instruction in pronunciation given in the index might well have been omitted. Is anything gained by telling people to pronounce Poitou as "pwä tö"? Every chapter has a series of questions on its contents appended to it. Some teachers may welcome this offer of help; the best will probably ignore it.

Social Psychology. By W. McDougall, F.R.S. (5s. net. Methuen.)

The publication of the ninth edition of Mr. McDougall's book, first published in 1908, is a clear indication that the study of psychology is now being undertaken by a large body of the general public, for the author expressly states that this volume is not addressed primarily to the student, but to the cultivated reader. The present edition (like the eighth one, published in 1914) contains a chapter on the sex instinct which adds greatly to the value of a book which is already regarded as a classic, and is therefore beyond the need of criticism. The new chapter, however, calls for consideration, and is worthy of serious study from all teachers and parents. Mr. McDougall traces the sexual instinct in the lower forms of life up to man, and shows that the nature and operation of this "instinct in mammals holds good for the human species; and although the operation of the instinct is often (especially among persons of culture and refinement) very much complicated and obscured by the influence of the will, and of personal sentiments and ideals, it nevertheless is often displayed in relatively uncomplicated and direct fashion." The problem of how to regulate this powerful instinct—the most powerful and universal, indeed, of all instincts—is one of the most difficult that an advanced civilization has to solve. Hence it is of the highest importance that a knowledge of the nature and development of this instinct should be brought within the reach of all adults, not merely for their own enlightenment, but for the sake of the young.

Mr. McDougall gives a brief outline of the doctrines on sex

psychology associated with the name of Prof. Freud and his school, and, while rejecting these extreme theories, believes that they contain ideas that may be helpful in the comprehension of the part played by sex in both normal and abnormal beings. Certainly from the age of eight or so the sex instinct begins to show itself, and from this age it is desirable to direct it into a healthy channel, otherwise it is liable to cause ugly and unhealthy manifestations. A few wise words on enlightenment in sex matters will be welcomed by many older teachers, who feel that, though ignorance is by no means synonymous with innocence, actual and explicit knowledge of sex facts and operations does not by any means make for sex purity, as proved in the case of the slum denizens, and to some extent among medical students, who, as Mr. McDougall says, are certainly not ignorant of the facts, yet are not in any way specially noted for superior sex morality. The book should form part of the equipment of the teacher, who will find there, especially in the supplementary chapters, ideas which will be of practical value in the schoolroom.

Child Training. A System of Education for the Child under School Age. By V. M. HILLYER. (5s. net. Duckworth.)

Mr. Hillyer tells us that "if you stimulate and exercise the brain-cells properly you can develop almost any habits, abilities, tastes, faculties you may wish." He is careful to state his disbelief in the doctrine of "formal education," and yet this statement sounds dangerously allied to it. This, indeed, is the fault we find with the book. Again and again the "formal" fallacy creeps in; the child is to be set to do things of no interest or point for him, in order to attain a habit of obedience, neatness, &c. How strange, too, to find children under six being instructed about primary and secondary colours, parallel lines, carnivorous animals, and so on. We have looked to America for enlightenment in education, but this book seems almost wholly retrograde.

"Cambridge Handbooks for Teachers."—*Via Nova: or, The Application of the Direct Method to Latin and Greek.* By W. H. S. JONES. (3s. 6d. net. Cambridge University Press.)

To everyone concerned in the teaching of classics this must be a most interesting, and even inspiring, book; it is full of sound theory and helpful practice (see, for example, page 7, on Reformers' Principles; page 39, The Need of General Grammar; page 69, Text-books; page 82, Corrections; pages 151 ff., Place of Classics in the Curriculum). Mr. Jones explains clearly, and with a noticeable sincerity, what the "New Way" is and is not. He is ostensibly describing the application of the Direct Method to classics, but he is also showing by precept and example what ought to be the aims and methods of all true teachers. The "New Way" is really the oldest and first "rule in the book," but it has to be rediscovered over and over again, because teaching is such a terribly difficult art that those who try to apply it are constantly falling into error owing to ignorance, laziness, prejudice, over-work, want of sympathy or of opportunity, slavish adherence to custom and habit, &c. Every language teacher who feels dissatisfied with his methods or their results would profit by reading *Via Nova*. We should like to note three points, basing our remarks on some personal experience as well as on Mr. Jones's book.

It seems that the direct method cannot be applied with full success in teaching Latin unless (1) the spirit and practice of the teaching throughout a school is in sympathy with it; (2) the teacher himself is ready and able to take infinite trouble to learn as well as to make it possible for his pupils to learn; (3) sufficient time is allotted to the language. (1) To make direct method Latin lessons profitable a foundation of living English and French is necessary, i.e. a grip of elementary principles of language, the construction of a simple sentence and the functions of the parts of speech. Every teacher must realize how many of the mistakes in the ordinary Latin exercise are due to slipshod English and inaccuracy of grammatical conception. Further, if the pupils are not used to self-expression and self-activity in class the Latin time is largely wasted in excitement and mental adjustment. (2) The direct method needs a real mastery of the language on the part of the teacher. The textbook cannot take his place; he must plan very carefully and skilfully for himself both isolated lessons and courses. (Accuracy and fluency in speaking are a matter of care and practice.) (3) There are many schools (especially, perhaps, for girls) where only four, or even three, periods a week are allowed for Latin. It seems to us that in such cases the full aim of Latin teaching cannot be achieved, either by the direct method or any other. One or more partial aims, as it were, must be selected and method must be adapted so as to secure the best results under the given conditions; for ultimately method is simply the best means available for carrying out a purpose.

Latin Selections. Illustrating Public Life in the Roman Commonwealth in the Time of Cicero. (4s. 6d. Ginn.)

This book contains selections from Aulus Gellius, Asconius, the

Digesta, Varro, some definitions from Paulus and Festus, two laws, the *Lex Julia Municipalis* and the *Lex Quinctia de Aqueductibus*, besides many passages from Cicero's speeches, letters, *de Legibus*, *de Republica*, &c., and some letters of Pliny. It is well to have the less accessible sources of information in a handy form, but it seems a pity that the book contains no index of the authors and sources quoted from; these might at least have been given in the list of contents. Students will, no doubt, find the collection helpful, and it may well serve the further purpose of leading them to widen their reading in the classics. We suppose "candidacy" is an American equivalent of "candidature."

Women and Bribery. By R. M. LEONARD. (3d. The Bribery and Secret Commissions Prevention League, 9 Queen Street Place, E.C.)

The Prevention of Corruption Act was passed in 1906, and already there have been a hundred convictions and various terms of imprisonment imposed. Of these five have affected women. As at least a third of the women of the country are occupied in paid work, the percentage is small. In view of the fact that larger numbers of women than usual are passing into paid work, such as munitions, the League does well to call attention to the Act. In the dealings of women servants with tradesmen there are many temptations to blackmail—temptations not always overcome. The League publishes the name of its President (Right Hon. Sir E. Fry) and seven Vice-Presidents, all men. Why should not some of its officials be women, as a practical acknowledgment that women ought to have honour and responsibility thrust on them as well as duties and suggested punishments? It is significant that a large part of the pamphlet deals with "Woman's Sphere, the Home." In spite of the constitutional defect of the League, the pamphlet is sensible and opportune.

The Great World War. Edited by FRANK A. MUMBY. Part X. (2s. 6d. net. Gresham Publishing Co.)

With Part X the fourth and concluding volume, as at present advised, begins. It contains a capitulatory chapter by the General Editor, "The Partitions of Poland," and "The Great Russian Retreat," by E. S. Grew; "The Summer of 1915 at Sea," by David Hannay; and "The Summer Campaign on the Western Front," by the General Editor. For frontispiece there is a striking portrait of the Grand Duke Nicolas, and the interest in the photographs is well sustained. Even if, as our most sanguine prophets predict, the autumn sees the end of the War, the editor will be hard driven to complete his history in the two remaining parts.

Canada in Flanders. By Sir MAX AITKEN, M.P. Vol. I of the Official Story of the Canadian Expeditionary Force. (1s. net. Hodder & Stoughton.)

This semi-official narrative of one section of the War, from Neuve Chapelle down to the arrival in France of the Second Canadian Division, with a Preface by Mr. Bonar Law and an Introduction by Sir Robert Borden, forms the first volume of what is certain—at least, in the Dominion—to form a national chronicle. Sir Max Aitken, as a reader need hardly be reminded, is himself a true-born Canadian, and served as a privileged eyewitness. He combines with discretion a graphic pen.

"Through the Eye Series."—*The Civilization of the Ancient Egyptians.* By A. BOTHWELL GOSSE. (5s. net. Jack.)

This is a professedly popular account of Greek civilization. The great feature of the series is the profusion of photographic and line illustrations. It is certain that such a book as this can make a strong appeal where other methods would fail, for the number of carefully selected and really beautiful illustrations makes it easy to follow the simple graphic descriptions of the life and occupations of ancient Egypt.

Music as a Language. Lectures to Music Students. By ETHEL HOME. (3s. 6d. net. Oxford University Press.)

Miss Home's book seems to come as an immediate response to Mr. Stewart Macpherson's invitation to the heads of schools, contained in his recently published book, *The Musical Education of the Child*. Miss Home, Head Mistress of the Kensington High School, obviously has been weighing the value of music study, and does wish it recognized as one of the regular school subjects. Along with Mr. Macpherson, she wants the music teacher to be one of the school staff, and has recognized the necessity for training the music teacher in the most practical way by having a musical training department attached to her school. Her views are ably set forth in these lectures. It is a most hopeful sign that musicians interested in education and those engaged in general education are working for a common end—to widen the scope of the musical education of the child and to secure trained teachers for this work. Miss Home's book contains much sound pedagogy. Some points of detail may raise dissent or question. It seems that she believes in cultivating only a sense of relative, not absolute, pitch. As to the children

whose rhythmic development is in advance of their melodic development (see page 41), it has to be recognized that this is a natural order, and may not be due to bad teaching; in fact, it is possible to have a fine rhythmic sense and almost no melodic sense. In teaching a song, too, it is often as well to get the rhythm first on a monotone, and then study the melody. The listening to chords in a sequence is made to follow the listening to them in isolation, and yet it seems pretty certain that a child gets the feeling for the tonic, dominant, and subdominant harmonies first through noticing cadences before it is capable of analysing the chords at all.

Types of Christian Saintliness. By WILLIAM RALPH INGE, Dean of St. Paul's. (Sewed, 1s. net; cloth, 2s. net.)

These three addresses, delivered to the London Diocesan Girls' Association, are an attempt to define and illustrate the three types of Christianity that co-exist in the Established Church, the Catholic, the Protestant, and the Liberal. But Dean Inge carefully abstains from labelling them by their vulgar titles of High Church, Low Church, Broad Church. The distinctions are wider and deeper than any that separate denominations or sects. "It is almost a pure accident whether a man is born and dies a Roman Catholic or an Anglican or a Dissenter." The subject, it would seem, was chosen before the lectures were written, and these hardly answer to the title. Only the third presents us with lives or characters of typical saints, Whichcote and John Smith, the Cambridge Platonists. Corresponding to these is a brilliant and original characterization of St. Paul as the prototype of Protestantism. To sum up the moral of the three lectures, Dean Inge, while finding good in all three types, regards the Liberal Churchman as the ideal of the future, and intolerance, wherever found, as an accursed thing. He accepts evolution as applicable no less to Christianity than to science, and will accept nothing as the final truth, even on Apostolic authority. His chief defect is that he has no adequate sense of *sin*; that, as was said of Matthew Arnold, he is too much at his ease in Zion, and thinks, like Robert Browning, that good and honest work will suffice without saintliness. The Dean is hardly fair to Browning, who praised "grand old Martin Luther" for "teaching original sin." Southey did not write the famous chapter on "Snakes in Iceland," and *à l'outrance* is an old offender.

The Lands of the Scottish Kings in England. By MARGARET F. MOORE, M.A., Carnegie Fellow in Palæography and Early Economic History. (5s. net. Allen & Unwin.)

Mr. Sidney Low remarked at the recent Conference of the Historical Association that England is not even insular—she has always shown a marked disregard for the wishes and preferences of Scotland, Ireland, and Wales. Of the three, Scotland made far and away the best fight for national independence. A Scotchman must always feel refreshed and invigorated when he reads over the terms of the Act of Union of 1707. Three years before its passing Scotland informed England (once more) that the only true Church of Christ was the Presbyterian; limited England's power to drag Scotland into war, and declared that, unless certain conditions were observed, she would not choose the same Sovereign as England when the Stuart dynasty came to an end. At the Union, Scotland obtained an indemnity, her own laws and Church, and other excellent terms. Now Miss Moore's book goes back over a piece of Scottish history little known on either side of the Border, the lands that Scottish Kings owned in England, and the important effect they had on the political relations of both kingdoms. For a century and a half the effort to retain these lands constituted the whole foreign policy of the northern kings. When David I married Matilda, daughter of the Earl of Northumberland (accession 1124), he acquired the Honour of Huntingdon, and reinforced by this marriage the Scottish claim to Northumberland and Durham. In his introduction Prof. Hume Brown summarizes the great struggle for supremacy between North and South as turning on the possession of the northern counties. Whoever held them would be the "predominant partner," and at one time it seemed likely that Scotland would hold the honour. But she could not produce—royalty never can—a line of kings of the calibre of King David. Civil dissension tore and crippled Scotland and the destinies of both kingdoms were decided on their present lines. This book relates the whole story of the struggle during 150 years, and it is, therefore, an interesting and important contribution to the history of both countries. To some extent it explains the admirable terms of the Union which Dutch William had so much at heart, but which could not be carried during his life. The four last chapters dealing with life on the Scottish manors in England, life in the religious houses, the administration of law, the success of the Scotch in cattle driving, illustrate different phases of life in bygone days.

A Short History of Early England to 1485. By H. J. CAPE, M.A. Oxon., &c. (2s. 6d. Methuen.)

That a schoolmaster who has for years taught English history should be strongly tempted, as Mr. Cape tells us he has been,

to write a textbook, is natural, especially if he is interested in his subject and in the teaching of it. To this feeling and to a desire to follow out the recommendations of the Board of Education is to be attributed the appearance of this handy and, on the whole, well composed volume. A general acknowledgment is proffered in the preface if the author has borrowed from others. The "if" should, we think, have been left out, but no great acquaintance with original authorities is necessary for the writing of a schoolbook, though the more thorough the author's knowledge is the more likely it is that, if other qualifications for it exist, his work will be satisfactory. In many respects this book is well suited for use in secondary schools. It is written in a clear and readable style; its paragraphs are furnished with indented marginal contents; the facts related are many, but the narrative is not overloaded; there is a sufficiency of dates, and continental affairs receive adequate notice when they bear on the course of English history. On the other hand, there are many statements which call for amendment. Birinus, the apostle of Wessex, was not one of "Oswald's missionaries." He came from Italy straight to the West Saxon land. Bede's words are: *Brittaniā perveniens ac primum Gevissorum gentem ingrediens* (Hist. Eccl. iii. 7). Mr. Cape's meaning is doubtless correct when he says that at the Norman Conquest all land became *terra regis*, but the expression is unfortunate, and the words implying that before that date the land of a ceorl was absolutely his own take no account of the growth of seigniorial power. It is incorrect to describe Archbishop Lanfranc as Abbot of Bec, and if there was a "tradition" that Henry was concerned in the death of his brother Rufus, it was a foolish one, and should find no place here, especially with the remark that "he had most to gain." Henry I, we are told, brought Gilbert "Ffolliott" over to England. Foliot's family may have come to England in Henry's reign, and he was here as a boy, but he became a monk of Cluny and was head of the Cluniac priory of Abbeville in 1139, four years after Henry's death, when Miles of Gloucester, his kinsman, brought him over by procuring for him the Abbacy of Gloucester. He was learned and an excellent letter-writer, but to describe him as "the greatest scholar of his age" is simply ludicrous. Mr. Cape makes the wives of Henry I and Stephen sisters, but this is evidently due to a muddled sentence. Richard I met his death not in Poitou but in the Limousin. Edward I did not substitute archers for cavalry; the improvement in tactics adopted by him was the combination of cavalry with infantry armed with missiles, chiefly bowmen. This is perhaps enough to show that this book needs revision before it can be recommended for use in schools.

Lingard's History of England. Abridged and Continued by Dom HENRY N. BIRT, O.S.B. Revised and cheaper edition. (3s. 6d. G. Bell.)

So far as the abridgment of Lingard's justly famous history is concerned, Dom Birt appears to have performed his dreary task with some success. His Eminence Cardinal Gasquet assures us, in a commendatory preface, that every care has been taken to notice any new light "which modern research has thrown upon our history." The amazing statement that in Saxon times "no less than two-thirds of the population existed in a state of slavery," which, by the way, we have failed to find in Lingard, should have been amended in this edition. The continuation of Lingard's work is so compressed that we cannot take it very seriously, but we are bound to say that, with all due allowance for the exigencies of space, it must be pronounced eminently unsatisfactory. For example, Wilkes should not be said to have questioned the king's veracity, though George III took his bitter criticism of the Speech from the Throne as a personal insult; Pitt showed his courage, in 1784, not by "advising a dissolution," but by withstanding a hostile majority in the Commons until the time came that he could safely appeal to the country; his standpoint on the Regency question is misstated; he did not go to war with France to restrain her "in her revolutionary career," nor is there reason to believe that his retirement was caused by any other motive than that which he assigned to it. Lastly, Fox's death should not be said to have brought loss to the Duke of Portland's Administration, for he died in 1806, before it came into existence—not, as here, in 1807; and his death was caused, not by "a load of responsibility," but by dropsy.

The Story of England. By MURIEL O. DAVIS, late Scholar of Lady Margaret Hall, Oxford, &c. 1912. (3s. Clarendon Press.)

This is a generally successful attempt to set the history of England before young learners in a way that is likely to arouse their interest. Miss Davis writes with vigour; her sentences are short, but not jerky, and her meaning is always plain, though she wisely avoids the use of childish language, and no one reading her book will have the feeling that it is written down to suit a lower intellectual level than her own. The points she brings forward are for

the most part well chosen, and she uses anecdotes and scraps of ballads with good effect to enliven and illustrate her narrative. But the desire to be interesting or picturesque is not without its dangers, and in her account of Herevard it has led her to trust to romance. It is, perhaps, almost necessary in a book of this kind to label kings and queens with some moral or other characteristics: it is doubtless often difficult to do so in terms which convey precise information, and the description of Henry III as "fussy and conceited" does not seem particularly happy. More details are given, and the treatment is more advanced in the later than in the earlier part of the history. For example, the excellent paragraphs on the industrial revolution of the eighteenth century are a great advance on the jejune and unsatisfactory notice of the condition of the peasantry at the insurrection of 1381.

A Treatise on Statics. By GEORGE M. MINCHIN. Vol. II. Fifth Edition, revised by H. T. GERRANS. (10s. 6d. Clarendon Press.)

Shortly before Prof. Minchin's death (in March 1914), it was decided to issue a revised edition of his standard textbook on statics. Some portions were to be omitted and, it was to be hoped, incorporated in an independent work; an account of his researches on spherical harmonics was to be added, as well as a large number of new examples. The author himself decided on the articles and chapters which should be left out, but, owing to his illness and death, the work of additions was left to other hands. Mr. Gerrans has inserted the new problems in an appendix, which now forms one quarter of the whole volume. The problems, which number nearly five hundred, are a most valuable feature of this new edition of one of the best of our mathematical textbooks.

A Book of English Poetry. Edited by GEORGE BEAUMONT. (3s. 6d. net. Jack.)

The *Book of English Poetry* reminds us both in form and substance of a favourite of our youthful days, Dr. Aikin's *British Poets*. It was, if our memory serves us, a stout volume in double columns, and gave, or professed to give, the complete works of all our classical poets, from Ben Jonson down to Cowper. The present volume is on a larger scale, and more ambitious in its design. It begins with Chaucer, and goes down to poets still living and flourishing, only one of whom is excluded by reason of copyright. Dramatic authors are likewise barred, with the exception of Shakespeare, whose *Lucrece* and thirty-five of his sonnets are given entire; and there are no biographical introductions, which loomed large in Dr. Aikin, but which we religiously skipped. It is, we must confess, a pleasant surprise to find once more an anthology of the earlier type, and we might well contrast it with the exquisite esoteric anthology of the present Poet Laureate, reviewed in our last number. The book is "not fair to outward view," and must stand or fall on its intrinsic merits. The best test that we can apply is to consult the index of first lines, and see how many of the thousand and odd poems we recognize, and in how many of those we fail to recognize the fault is not the compiler's, but our own. Taking at random a hundred lines, we found some sixty familiar friends, and the forty missing links were accounted for mostly by lapse of memory, and less than a score by ignorance of poets in the making. This is a casual but well merited compliment, and our only suggestion to the enterprising publishers is that they should reissue the volume in two parts, so as to make it no less attractive than it is profitable. With this object some of the longer extracts might well be omitted—for instance, Keats has fifteen pages—and some obvious omissions supplied. Brief notes on the obscurer poets might well replace "Sources of Extracts" and "Notes on Certain Texts."

From Joseph Williams we have received some pianoforte music, all of which is interesting, but not uniformly attractive. Some modern English composers are evidently obsessed by the notion that originality, even if this results in ugliness, is a criterion of artistic merit. They forget that as soon as the novelty wears off there is often nothing of any value left. This applies to some pieces by ARNOLD BAX, who is evidently specializing in *Russian Tone Pictures*, and we cannot think that these are likely to become popular. Sir A. MACKENZIE, in *English Air with Variations* (rather difficult), and YORK BOWEN, in *Suite Mignonne*, show how this fault can be avoided without lapsing into trivialities. A *Love Song and Valse Impromptu*, by FELIX SWINSTEAD, are quite attractive, and, with *Egyptian Sketches*, by HUBERT BATH, should be welcomed by teachers who want something neither difficult nor trite. The same can be said of *Album Leaf*, by F. MANNS, and *Lyric Pieces*, by HARRY FARJEON. *Five Country Dances*, by HELEN BIDDER, are dainty, and should prove useful rhythmic studies. A series of pieces by VON AHN CARSE, entitled *The Violin Teacher*, can be unreservedly recommended. They are quite easy technically, but will repay close study.

COLONIAL AND FOREIGN NOTES.

UNITED STATES.

We have been told that the War will cripple us for a generation.

Of Continuation.

Its lessons rightly understood, it were the quick and permanent salvation of Britain. Into the moral world it has brought new light; in the economic world it has taught us what treasures we have been wasting—in idle girls, in broken manhood, in untrained men and women. Let our children stay in the primary schools until the age of about fourteen, receiving during the latter part of the course vocational guidance and generalized vocational instruction; let them then pass either to secondary schools or to continuation schools offering specialized vocational instruction and some measure of liberal education. What would be the result? The chief asset of the nation, its children, would, in a quarter of a century, be quadrupled in value. To the proposal Bumbledom says, No! It is an idle dream, cries the unimaginative burgher. Let him read, however, this item of news from York, Pennsylvania—which is in the United States, and not in Dreamland. Sixty-nine pupils attended the first session of continuation schools under the provisions of the State Child Labour Law. By that Law all children between fourteen and sixteen years of age employed in local establishments during the day are required to attend the continuation school one day in each week, only those engaged in agricultural work or employed as domestic servants being exempt. The schools are to be open from 8 o'clock in the morning until 5 o'clock in the evening; and, so far as is feasible, a different group of pupils will attend them each day. The Superintendent is striving to arrange the hours of attendance so as to suit the convenience of employers. The scheme is in the experimental stage—a stage which England is not allowed to reach. Yet it was in May 1911, nearly five years ago, that the Education (School and Continuation Class Attendance) Bill, "presented by Mr. Runciman, supported by Mr. Trevelyan, Mr. Solicitor-General, and Mr. Tennant," was ordered to be printed, with the cognizance, we may assume, of the Board of Education. The Board of Education is like the printers as denounced by Calverley! It will print anything. But it is hard to move it to effectual action—a great European War was needed for the purpose.

The "pictures" or "movies," as they are affectionately called by their admirers, draw the children in the United States even more powerfully than in England. To a question, "What is the average number of times you go to the motion-picture shows monthly?"

The Eye as Teacher.

731 pupils of the Decatur High School, Illinois, made answer. Only 78 were total abstainers; 100 debauchees paid from 12 to 30 visits a month; whilst a conscientious middle section of 145 admitted that they went more than eight times a month. What does wise pedagogy do in face of such a phenomenon? It must watch the effect and control the character of the exhibitions. At Los Angeles a new post has been created—that of County Director of Visual Education. The requirements are that the holder of the office must have, as well as a high-school teaching certificate, a practical knowledge of cinematographic pictures, their installation, and the mode of working them. California is minded not to cast out the "movies" as if they were devils, but to enchain them in the service of the school.

The *Educational Review* (li. 2) contains an article on "Methods of Teaching at [the Naval Academy] Annapolis."

At Annapolis.

The Academy received, twenty-five years ago, a medal from the Paris Exhibition, awarded, according to the letter of transmission, "to the best educational institution in the United States and the best naval school in the world." Its students are drawn from every part of the United States and now more frequently than in the past they are chosen by competitive examination. The fact that they are paid, not paying, for pursuing their studies reminds them that they have entered on a vocation and stimulates them to work. A rigid system of drills and physical training obtains; but moral and intellectual culture is also provided for. The executive and disciplinary authorities have usually been naval officers. The classes are all large, since there is no specialization or choice of studies. In none of the courses, however, is the more or less discredited lecture system at all generally employed. In time of peace there are plenty of instructors, and it is thus possible to divide a class in any particular subject into "sections" of from eight to fifteen men. In the classroom the function of the teacher is not so much to impart knowledge as to hear recitations and to give each man a mark. Black-board exercises, papers, and oral recitations are the ordinary routine. The midshipman has a textbook put into his hands, is required to study it, and expected to reproduce with fidelity the

knowledge thus got. Every time he idles away a study period or is caught smoking in a corner, his delinquency is recorded in a book and counts against him. If the system of instruction tends to promote memory rather than reasoning power, it encourages industry and application, and develops a confidence that no task is too difficult to be mastered by resolution and hard work. These qualities are invaluable in a junior officer.

The important Keating Child Labour Bill passed the National House of Representatives by a vote of 337 to 46. The Bill makes it unlawful to ship in interstate commerce goods produced wholly or partly, in mine or quarry, by children under sixteen years of age. Nor may manufactured goods be traded between States if made in whole or in part by children under fourteen or by children under sixteen employed more than eight hours a day, or by children under sixteen employed at night. If we understand aright the summary of the Bill that reaches us, a State may deal internally with the products of child labour, but may not transmit them to another State.

The Bureau of Education produces great results at small cost to the people. The estimates for the fiscal year 1916-17 show an increase of 97,000 dollars on the amount for the current year. Prominent among the ends for which an increased allotment is required are the investigation and promotion of rural education, industrial education, school sanitation, and hygiene. The sum hitherto voted for the Bureau is a scandal, says an American writer, in a country that pretends to believe in education. We could name a country that has a very faint-hearted belief in education, yet spends large sums to maintain an Education Authority of little weight and no driving power.

FRANCE.

The influence of the War, elevating here, baneful there, is still dominant in education. In the playground comforters (*cache-nez*) are rolled to make Indian headgear; a strip of wood between the teeth is a Gurkha's knife; the lithest and most crafty-looking boy is executed as a spy. The teacher from his desk appeals for dutifulness in the name of the father doing duty in the trenches, and transmits to him his son's composition or "report." In examination you are asked to describe the scene in a village when a new *communiqué officiel* arrives, or to explain how the work of combatant men is now being done by old men, women, and children. But the Inspecteur d'Académie des Basses-Alpes, in a circular addressed to the primary teachers of his district, has some prudent counsels for them, of which England may well take note. They must not entertain the children about the War to the neglect of important matters of study; and they must not falsify the instructions they give in certain subjects, such as history, in order to blacken the enemies of the nation. It is better to suffer than to commit an injustice: it is better to be misrepresented than to misrepresent.

The ultimate effect of the War on the position of women is a theme still much debated. It is with women in the school that we are concerned. In order that girls may succeed with higher studies they ask for Latin in their *lycées*: hitherto, when they have got it, it has been in the third year and from a man teacher. In one of the *lycées* of the South-west the head mistress has introduced it in the second year and entrusted the course to a young *répétitrice*. It is contended that as women penetrate the classical humanities they will infuse into them some of their own qualities—"la délicatesse des sentiments, l'esprit de finesse, l'harmonie des devoirs et des droits, la beauté suprême." Meanwhile they are teaching the boys while the men fight. Statistics show that at the end of last November there were 104 women teachers in the *lycées* for boys and 293 in the *collèges*. In the *lycées* 5, in the *collèges* 9, women were teaching Latin. The development is interesting. The War found woman unworthy to teach Latin to girls and sees her imparting the august instruction to boys!

In 1902 France, it will be remembered, recast its secondary education, putting—to express the change briefly—liberal options in place of the old classical education. Even in the time of war the Parliamentary Commission de l'Enseignement deliberates. To it M. Painlevé, Minister of Public Instruction, declared himself in favour "ni d'un brusque retour aux 'humanités' intégrales, ni d'une croyance superstitieuse aux bienfaits d'un enseignement encyclopédique et superficiel." The old issue between width and depth is raised. It seems that the teaching of French will in future receive more stress, and that classics will be exalted in honour, or at least not lowered. Literature is to thrust science back, in spite of the recent applications of science!

CAPE OF GOOD HOPE.

The attention of School Boards is called (by the Education Department) to the need for economizing expenditure on school equipment.—Fifteen schools in the Province have their own school magazines.—

News in Brief Items.

The Education Department asks to be supplied with full information in regard to teachers on active service, of whom there are many.—The Cape Town sub-Committee of the South Africa Gifts and Comforts Organization is seeking to get touch with the girls' schools, that volunteers may be got to knit and sew for the purposes of the Organization.—The article reviewing European history in relation to the present War, written by M. Seignobos, and originally published in the *Revue de Paris*, is being circulated by the Education Department.

NEW ZEALAND.

In the Education Report for 1914 general progress is indicated.

Some Details about Education.

The year was marked by the passing of a consolidating Education Act. Many of the changes so effected are administrative; a noteworthy one is an improvement in the salaries of teachers, the minimum being raised from £90 to £110, the annual increments from £5 to £10, and the maximum increased in most cases by amounts ranging from £10 to £90 a year. As to primary education, the number of schools open at the end of 1914 was 2,301, as against 2,255 a year earlier, and the average weekly roll number in public schools showed an increase for each quarter on that for the corresponding period in 1913. The improved attendance is owing in part to the action of law, in part to a growing interest of parents in the education of their children and to brightened conditions of school life. A special grant of £4,000 was applied to the training of teachers. In the department of secondary education New Zealand, it will be remembered, has a liberal system of free places; now only 16 in every hundred pupils pay fees. The average salaries of secondary teachers are:—

	Men.	Women.	All.
Principals	524	397	482
Assistants	248	163	211

Important day technical schools, of secondary grade, provide industrial, commercial, domestic, art, and general courses. With regard to higher education, the New Zealand University Amendment Act of 1914 made new arrangements for the payments of fixed grants out of the Consolidated Fund to each of the affiliated institutions of the University; it also established a Board of Studies, the twenty members nominated by the affiliated institutions, to make recommendations to the Senate as to examiners, diplomas, &c.

UNIVERSITIES AND SCHOOLS.

OXFORD.

The most important academic event of the term has been the passing of a Statute making changes in the Honours School of Chemistry. Much was being done before the War to improve the teaching of Chemistry in the University. The new Professor has a great reputation not only as a chemist, but also as an organizer; another Professorship had been arranged, and the new laboratory just started building. The War has disarranged much of these schemes in the meantime, but the Sub-Faculty of Chemistry have been doing what can be done in these times; they have been thinking out their plans for the future. They now propose to divide the examination into two parts and to add to the present Honours school an examination in the principles and methods of a piece of research in which the candidate has been engaged for a year. No one will in future be able to get a class without doing both parts of the examination. The proposal is most important and interesting, and not only in its probable effect on the teaching of chemistry. The earlier plan was to encourage research by the granting of special degrees such as the B.Sc. These degrees have not been a great success. They have been largely taken by graduates of other Universities who have not the time to take the regular Honours course, but have not been to any large extent post-graduate courses as was hoped. The success of this new experiment will be looked forward to with interest when happier days return.

The O.T.C. has under the dispensation of the War Office entered on another phase. It was thought that when the War Office stated that no commissions would be given from the O.T.C. after the end of February that it would for the duration of the War

cease to be. It is to remain, however, though only as a pale ghost of its former self, as an avenue not to a commission but to one of the new cadet battalions through which in the future all candidates are to pass, and two of which have just been established. It is to be open, however, only to men under the age of eighteen and a half, possible candidates for commissions who are over nineteen being now all in the ranks. This is an important concession, though it naturally does not affect many men. There are a certain number of men who look forward to coming up when they have done their military service—elected scholars and others, who are still too young for the army. They can now, instead of staying on at school, come up for a term or so, and get a start with their University work and at the same time take the first steps to their commissions. Already the feeble numbers of the halt and lame and the foreigners are being added to by the very young.

The somewhat sudden death of the Master of Balliol on March 28, in his seventy-fourth year, has thrown a shadow over the last days of the term. Mr. Strachan-Davidson entered Balliol as Warner Exhibitioner from Leamington College in 1862 and graduated in 1866 as a First in Classical Greats, being elected to a Fellowship in the same year. His special study was Roman constitutional history, on which he lectured, and in 1872 he was appointed Dean of the College. To the public he was known as the author of the *Life of Cicero* in the "Heroes of the Nations Series," and recently he published the learned *Problems of Roman Criminal Law*. When through Lord Newland's munificence Jowett Fellowships were founded at Balliol, Mr. Strachan-Davidson and Mr. A. L. Smith were the first two Fellows nominated by the founder. On the death of Prof. Caird, in 1907, he was elected to the Mastership, and since then, though out of sympathy with the younger generation of Balliol Liberals, as a constitutional sovereign he exercised a genial hospitality and endeared himself to all Balliol men.

WALES.

The Sub-Committee appointed by the Central Welsh Board to investigate different problems relating to secondary education in Wales have prepared several memoranda, which will in due course be submitted to Local Education Committees and County Councils for consideration and discussion. These memoranda cover a wide range. For instance, one of them deals with the position of Latin in the curriculum, another discusses the best methods of prolonging the length of the school life of the pupils, while in a third memorandum we have a full treatment of the interrelation of technical and secondary education. But, in order that its investigations may be as thorough and comprehensive as possible, the Board has wisely resolved to study other systems of secondary education to see whether they throw any light on some of the difficulties with which we are confronted. The Scotch system, for example, has often been held up to us as a model of efficiency, especially as regards its methods of inspection and examination, and the Board has therefore arranged to send a Commission to Scotland to inquire into its working. These activities of the Central Welsh Board prove that it is fully alive to the importance of placing our educational system on a firm and scientific basis, and that it is prepared to do everything in its power to adapt it to the special needs of the Principality.

One of the most obvious defects in our educational organization was the lack of proper facilities for the higher type of technical education. Classes in special subjects, attended in the evening by a few enthusiastic young men and women, have been held in widely separated centres, but the level of efficiency has been very low and the work on the whole very ineffective, as the recently published statistics of the Board of Education tend to prove. The probable explanation of this apathy is that we have been too busy in the past in organizing our systems of University and secondary education to devote the necessary attention to technical education of the more advanced character, in spite of its supreme importance in a country which subsists largely on the mining and engineering industries. But latterly considerable progress has been made. Thus, not long ago, a thoroughly well equipped technical institute was opened at Newport, and a large mining school has been established at Treforest, and last month a new technical institute was opened at Cardiff at a cost of £62,000. Its equipment is of the most modern character, and, if it is properly supported by the business men of this wealthy city, it should develop into a very important centre of technical work. With the completion of the new buildings of the Swansea Technical College, Wales will have done a great deal towards remedying its deficiencies in this type of higher education.

After considerable hesitation and dilatoriness, the Treasury has, so it is stated, at last appointed the Commission of Inquiry into University Education. The Councils and Senates of the colleges have probably decided on their line of action before the Commission and arranged their evidence, but no public information of any kind has been given as to their attitude towards the inquiry. Nor, on the other hand, is it clear what is the real purpose of forcing this Commission on the University at this time of stress and uncertainty. The letter from the Treasury seemed to hint at the desirability of increasing the control of the Court over the University Colleges, but, if this is the main purpose of establishing the Commission, then we fail to see any urgency for it. And, besides, it is fairly certain that any attempt at interfering with the autonomy of the colleges will be strongly opposed, and may easily lead to a disruption of the University, which would be a calamity.

An important conference has been held at Cardiff to consider the best methods of teaching Welsh in the schools. It was attended by representatives of all the chief societies established for the promotion of the study of our language and literature. Wales has lately developed a somewhat abnormal liking for conferences on all kinds of educational problems, though the majority of them, we fear, have led to no serious practical results. Whether the last of the series will be more fortunate it is too soon to say. Mr. D. Lleufer Thomas, M.A., presided over the meeting, and at one of the sessions Mr. Llewelyn Williams, M.P., delivered an address. Mr. Williams is one of the critics of our educational system, but, if his speech at Cardiff is a full statement of his reasons for being dissatisfied with it, then there is no need to be unduly perturbed. The University apparently is not sufficiently national in character because the colleges at Lampeter, Trefecca, Carmarthen, &c., have not been made constituent colleges of the University, for, by admitting three colleges only, the University has become "academical rather than democratic." Now this kind of criticism appears to be based upon a total misconception of the true functions of a University. For what is meant by a "democratic" University which is not at the same time "academical"? Further, if all the colleges mentioned had become constituent colleges, we should like to know where the students or the necessary funds are to come from. Even with only three colleges, the financial difficulties have already become very serious. Speaking of the Central Welsh Board, Mr. Williams was equally vague and uninforming. It is easy enough to say that its constitution "ought to be reformed from top to bottom," but a wild statement of this kind, without specifying reasons for it, carries no weight, and is dangerously near rhetorical clap-trap. If there is to be criticism, let it be reasoned and informed criticism, so that it may give real guidance to the public men of Wales who are devoting their time and energy to make our system as perfect as our resources will allow. Nor do we see any more substance in the other objection made—viz., that the Central Welsh Board is a peripatetic authority. The Board, of course, is not a "peripatetic authority," for all its business is transacted at the office at Cardiff. It is true that meetings of the whole Board are held twice a year in different places, but it is only general principles that are settled there, and we do not understand how the locality of the meetings is likely to affect their discussion.

The Glamorgan Education Committee have another little difficulty to settle with the National Union of Teachers. It appears that four head masters have refused to conform to a regulation that they should live near their schools, and the Committee has given them three months' notice to quit their schools unless they agree to submit to the regulation. The N.U.T. state that no charges of late-coming or neglect of duty have been made and substantiated, and that teachers rightly resent any attempt to establish a claim on their private time.

SCOTLAND.

Emeritus Professor William A. Knight, who died at Keswick on March 4 in his eighty-first year, was a notable figure in St. Andrews during the twenty-six years of his tenure of the Chair of Moral Philosophy, which he resigned in 1902. He was well known throughout Great Britain as a lecturer on literary and philosophical subjects, and, during a period of over fifty years, he issued an almost continuous succession of books and other publications, including memoirs, philosophical essays, editions of Wordsworth and other poets, anthologies, &c. For many years he conducted the work connected with the L.L.A. diploma for women, and by means of the profits derived from this, along with a grant from the Pfeiffer Trust, he was the main instrument in establishing the University

Hall for Women Students at St. Andrews. In this and other ways he did good service to the movement for the higher education of women. A man of strong constitution and boundless energy, he accomplished a vast amount of work, too varied in its objects to be in every case valuable and enduring, and his contributions to the literature of Wordsworth are probably his most permanent achievement.

The late Lord Armitstead has bequeathed £5,000 to University College, Dundee. Mr. William S. McKechnie, LL.B., D.Phil., has been appointed Professor of Conveyancing, in succession to the late Prof. Moir. For over twenty years he has been Lecturer on Constitutional Law and History. He is the author of several books on political science, including his volume on *Magna Carta*, which is the standard authority on the subject. The University Court has by a majority adopted the Ordinance of the four University Courts regarding the Preliminary Examinations. A sum of £340 has been collected for a memorial to the late Prof. William Smart, and the University Court has approved the proposal to purchase from Prof. Smart's library his books on economics to the value of £200, in order to form a memorial library in connexion with the library of the Political Economy Department. A memorial brass is also to be placed in some suitable position in the University. Mr. J. D. Falconer, D.Sc., Lecturer in Geography, has been appointed by the Colonial Office to be Temporary Assistant District Officer in the Northern Provinces of Nigeria, and he has been granted leave of absence from the University during his tenure of this office.

Out of the 1,800 members of the University O.T.C. who have been enrolled since its inception, 1,121 have received commissions and over 160 have enlisted as privates. During the last year the corps has also given intensive training to 666 junior officers.

The Senate has resolved to confer no honorary degrees in June of this year. In his annual statement of accounts Prof. Matthew Hay reported to the University Court that there has been a decrease in revenue of £4,519, as compared with the preceding year. This loss is due almost entirely to a decline in the income from students' fees owing to the absence of men students on account of the War. On the other hand, there has been a saving in expenditure amounting to £1,940, and, as in the previous year there was a surplus of £1,806 in revenue, the actual deficit is only £767. The University has invested in War Loans and Exchequer Bonds a sum of nearly £58,000. The Senatus has offered the Gifford Lectureship for 1917-18 to Count Goblet d'Alviella, who has found it necessary to decline the appointment, as he has been made a member of the Belgian Cabinet, and all his books, papers, and notes remain in his home at Brussels, and are thus inaccessible.

Dr. R. McKenzie Johnston has been elected by the University Court to be a Curator of Patronage, in place of the late Principal. The Senatus has resolved not to confer any honorary degrees this year, in view of the condition of public affairs due to the War. The late Miss Marion Sutherland has bequeathed the residue of her estate, amounting to at least £3,000, to the University for behoof of the General Fund.

This Committee has considered the question of a probable shortage of teachers owing to the War, and the proposal of some School Boards that students who have almost completed their training should be allowed to accept posts as teachers. The Committee is of opinion that the supply of primary-school teachers can be provided in the ordinary course. In the case of higher subjects students, the Committee would require to be satisfied that all necessary steps had been taken to fill any vacancy before considering any application on behalf of a student in training to be allowed to accept a post. The Education Department is prepared to consider all such proposals on their merits. All the eligible training-college students at Glasgow have enlisted or have been attested before March 2.

In answer to a question in Parliament, the Secretary for Scotland announced that the total number of Scottish teachers who since the outbreak of War have been called to the colours on mobilization, have enlisted for immediate service, or have been attested under the Group system, is 2,275 out of a total of 3,736 of military age.

Glasgow School Board intends to ask the Chamber of Commerce to appoint a small committee to confer with the Board and with the Glasgow Commercial College, in order to arrange courses of study in general and commercial subjects of various grades, for which certificates would be issued, and which would be accepted by employers as evidence of the educational qualifications of persons in their employment and of others seeking employment.

IRELAND.

The Senate of Dublin University held a meeting on March 7 for conferring of degrees.

At a meeting of the Board on March 4, the Rev. J. G. Carleton, D.D., was appointed Deputy to the Regius Professor of Divinity, in succession to the Rev. Newport White, D.D., who has been appointed Archbishop King's Professor of Divinity. Dr. Carleton has been an Assistant Lecturer in the Divinity School since 1888, and is known outside Trinity College as a teacher.

Prof. Pope, M.A., Professor of Modern Indian Languages in the College, is now delivering a series of weekly lectures on Indian history, philosophy, religions, social customs, &c., given on Thursday afternoon throughout this and next term. Prof. Pope has spent over thirty-seven years engaged in educational work in various parts of India. The lectures were originally intended for students only, but in response to a desire expressed by many outsiders, they are now open to the public.

The College authorities are preparing a record of the services of past and present students of the University in the present War—a task of some magnitude, which has not yet got beyond the early letters of the alphabet. Instalments of the official list of names are appearing from day to day in the press.

The authorities of the National University publish in their Calendar a list of their students who are serving in the War—amounting to about two hundred. It appears that at the beginning of last year an effort was made by the students to form an Officers' Training Corps similar to that of Trinity College. About one hundred students enrolled and attended drills regularly under the control of some of the professors; but, for some reason or other, the necessary sanction from the War Office for the formation of the corps was not forthcoming, and the movement collapsed. At a meeting of the National University Senate, on March 1, it was decided to hold a special examination for medical degrees next June, open only to candidates who, if qualified as a result of the examination, undertake to apply at once for commissions in the Indian Medical Service, the Royal Army Medical Corps, or the Naval Medical Service. At the same meeting, Mr. T. J. Westropp, M.R.I.A., was appointed Extern Examiner in Archaeology, in the room of the late Sir John Rhys.

The Crown appointments to the governing bodies of the constituent colleges of the University have been made, and are as

follows:—Dublin: Bishop Foley, D.D.; the Right Hon. Michael Cox, M.D.; the Right Hon. Laurence Waldron; and the Rev. Wm. Crawford, M.A. Galway: Bishop O'Dea, D.D.; Lord Killanin; and the Rev. John Courtenay Clarke, D.D. Cork: Bishop Dowse, D.D.; Bishop O'Callaghan, D.D.; and Arthur Sharman-Crawford, Esq.

At the annual prize distribution of the Royal Irish Academy of Music, the Lord Mayor, who presided in the absence of the President (the Lord Lieutenant), referred to the restoration of the Treasury grant of £300, and also stated that, owing to the increase of pupils, the Governors had taken over two additional houses adjoining the present one in Westland Row to provide needed classrooms. It is to be hoped that when the War is over, and money is once more available for educational purposes, the Academy may be able to undertake such building alterations as will render its habitation a little more worthy of its name. One result of the War which is, perhaps, not an unmixed evil, is that pupils who obtain scholarships are no longer sent abroad, but continue their musical education in Ireland.

The Margaret Stokes Memorial Lectures on Irish Archaeology are being delivered this year by Prof. R. A. Stewart Macalister, D.Lit., at Alexandra College, on the evenings of Friday, March 24, and the following Wednesday and Friday. The subjects treated are: "The Dolmens," "The Standing Stones," and "The Stone Circles."

DALCROZE SOCIETY OF GREAT BRITAIN AND IRELAND.—During his visit to England M. Jaques-Dalcroze invited members of the Society who had been his pupils to a lesson at the London Dalcroze School (23 Store Street, W.C.). The class was very characteristic of M. Dalcroze. One great charm of his teaching is that he builds always on simple elements. One exercise grows out of another. Some slight variation will be made to give a new shade of expression, and out of this will grow others, till one is led insensibly to a complete metamorphosis of the original, without effort or difficulty, only with keen delight in the realization of a natural growth. The Dalcroze Society exists to encourage the study of Dalcroze Eurhythmics. Inquiries should be addressed to the Hon Sec., Broome House, Didsbury.

400 MEDALS AND PRIZES!!!**STUDENT'S ELEMENTARY
BOOK-KEEPING**

By **ARTHUR FIELDHOUSE**, Accountant,
66 West Parade, Huddersfield,

who will forward copy **Index** and **Specimen Pages** on receipt of
Post Card addressed to **P.O. Box A 27, Huddersfield.**

355 Pages. 19th Edition. Post free 2/-.
100 Exercises. 350 Questions.

Teacher's Specimen Copy, from Author only, 1/-.

The ONLY TEXTBOOK to which there is a FULL KEY.

While this textbook more than covers all **Elementary Examinations** in this subject, its special design is to meet the requirements of the excellent Syllabuses issued by the **Society of Arts, West Riding County School, the College of Preceptors, Oxford and Cambridge Locals, the London Chamber of Commerce, and the National Union of Teachers.**

The **exercises** and the principles introduced therein are so carefully **graded** in point of difficulty that the student is trained to work the most difficult set of transactions without being appalled at any stage of his study. No exercise is too long or too complicated to be completed between each lesson. The **Questions** will be found very useful for testing the student's knowledge at each stage of his work. **Examination Papers** of the **Society of Arts, the W.R.C.C., College of Preceptors, the Oxford and Cambridge Locals, and the L.C.C.,** are included.

LONDON: SIMPKIN, MARSHALL, HAMILTON, KENT, & CO., LTD.

**THE STUDENT'S
BUSINESS METHODS**
and
Commercial Correspondence.

By **ARTHUR FIELDHOUSE**, Accountant,
66 West Parade, Huddersfield,

who will forward **Specimen Pages** and **Index** on receipt of Post Card
addressed to **P.O. Box A 27, Huddersfield.**

Seventh Edition. 380 Pages.
2/6 Post free.

**80 TEST and EXAMINATION PAPERS, containing
1,300 QUESTIONS.**

This is the only **practical, up-to-date** book on **Commercial Correspondence** and **Office Work**, and is characterised by the same qualities that have made the author's other textbooks so popular. The lessons are well **graded**, and the **teacher is saved the drudgery** of preparing **Test Papers**, one of which follows every chapter, in addition to numerous **Examination Papers**. **PRACTICAL work** is provided in the **Series of Business Transactions** included in some of the Test Papers. It is the only **Complete Guide**, covering all the **Elementary Examinations**. Small-priced books may be had on the subject, but as they do not cover the Syllabuses they are dear at a gift. **Efficiency** should be the first consideration. It is an excellent **Hand-book** for the **Junior** in the **Office**. **Teacher's Specimen, from Author only, 1/3 post free.**

LONDON: SIMPKIN, MARSHALL, HAMILTON, KENT, & CO., LTD.

DUSMO
The Dustless Sweeping Powder

DUST in your SCHOOL is the CARRIER of
DISEASE which may ATTACK those least able
to resist it. You can REMOVE this
DANGER by the use of DUSMO when sweeping.

A line of DUSMO laid down and
swept before the broom will
prevent dust rising, and so dry
scour the floor as to render wet
scrubbing a quite unnecessary
expense.

Copy of Letter recently received from a
well known College:—

"We have completed a period during which
DUSMO has been severely tested, and I
am now convinced of its efficacy, although
I was at first sceptical as to its merits.
You will need no better testimonial than
the accompanying order for six more bags."

Use DUSMO and effect
great economy in your cleaning
bill for 1916, and you will also
have a CLEAN BILL OF HEALTH.

"A Sweeping .
... Assertion."
**KILLS DUST . .
... AND GERMS.**

A BOOK THAT "MAY BE USED WITH ADVANTAGE WITH ANY FRENCH GRAMMAR."

EIGHTH EDITION. With Supplementary Easier Exercises.
Fcap. 8vo, cloth, interleaved. Price One Shilling.

Hints on French Syntax.

By **FRANCIS STORR**, B.A. Camb., Officier d'Académie, Occasional
Inspector to Board of Education, Scottish Education Department, and Central
Welsh Board; Examiner to Oxford and Cambridge Joint Board, Cambridge
Higher Locals, Scottish Education Department, Civil Service Commission,
University of London, &c., &c.

Extract from Author's Preface.—At the request of several Masters and
Mistresses, who have used the *Hints* with their classes, I have added an Appendix
with easier examples. In them more French words are supplied, and more
references are given to the rules which they illustrate. The method of pitfalls is
rightly discredited, and it is generally allowed to be a more fruitful discipline
to prevent a pupil from making blunders than to rap him over the knuckles for
making them. Even with the references the happy-go-lucky boy and the cocksure
boy will both be caught tripping.

London: WILLIAM RICE, Junior, 3 Broadway, Ludgate Hill E.C.

PRIZE COMPETITIONS.

The Translation Prize for March is awarded to "Accinctus."

The winner of the Translation Prize for February is Miss Alice M. Balean, 15 Alexandra Villas, Brighton. At her request we are forwarding the amount to the "Society for the Relief of the Professional Classes."

Brusquement, comme les ingénieurs s'avançaient avec prudence, une suprême convulsion du sol les mit en fuite. Des détonations souterraines éclataient, toute une artillerie monstrueuse canonnant le gouffre. A la surface, les dernières constructions se culbataient, s'écrasaient. D'abord une sorte de tourbillon emporta les débris du criblage et de la salle de recette. Le bâtiment des chaudières creva ensuite, disparut. Puis, ce fut la tourelle carrée où râlait la pompe d'épuisement, qui tomba sur la face, ainsi qu'un homme fauché par un boulet. Et l'on vit alors une effrayante chose ; on vit la machine, disloquée sur son massif, les membres écartelés, lutter contre la mort ; elle marcha, elle détendit sa bielle, son genou de géante, comme pour se lever ; mais elle expirait, broyée, engloutie. Seule, la haute cheminée de trente mètres restait debout, secouée, pareille à un mât dans l'ouragan. On croyait qu'elle allait s'émietter et voler en poudre, lorsque, tout d'un coup, elle s'enfonça d'un bloc, bue par la terre, fondue ainsi qu'un cerge colossal ; et rien ne dépassait, pas même la pointe du paratonnerre. C'était fini ; la bête mauvaise, accroupie dans ce creux, gorgée de chair humaine, ne soufflait plus son haleine grosse et longue. Tout entier le Voreux venait de couler à l'abîme.

By "ACCINCTUS."

Suddenly one last rending of the ground routed the engineers as they cautiously advanced. There were bursts of subterranean reports, as if some monster battery were bombarding the crater. On the surface the remaining buildings were crashing and crumbling.

At first a sort of whirlwind swept away what was left of the sifting machinery and the screening room. The boiler-house then collapsed and disappeared. Next it was the square turret, where the drainage-pump was gasping, that fell prone like a man mowed down by a cannon-ball. After that a startling sight met the eye—the machine, its joints wrenched from the masonry, its limbs quartered, struggling against death. It still went on, it bent the connecting-rod, that gigantic knee, as if to raise itself, but it was dying, crushed, engulfed.

Only the chimney-stack, some ninety feet high, still stood upright, shaking like a mast in a hurricane. You were expecting that it would be broken to pieces amid clouds of dust when all at once it telescoped, gulped down by the earth, melted like a colossal candle ; nothing, not even the point of the lightning-conductor was above the level of the ground.

That was the end ; the evil beast, crouching in that hollow, glutted with human flesh, no longer drew its deep, long breaths. Every trace of the Voreux had that very instant sunk into the gulf.

We classify the 114 translations received as follows :—

First Class.—Bia, Accinctus, Featherstone, Sirach, Prestbury, St. George's, Gothicus, Format, Alice in Wonderland, Senex, L.M.S.

Second Class.—Chameau, Mow, Howarth, Mab, Brer Rabbit, Emily, Our Eldest, Terra Tremis, Shax, Rastra, Peregrinus, Antoine, R.D., Innishannon, Auld Reekie, E.K.D., C.M.B., Zeir, Malbrook s'en va t'en guerr-re, Douai, A.M.F., W.A.E., Studier-ende Frau, Menevia, Corncrake, Dane, Delilah, Montserrat, Chislehurst, Leander, Eugène, Talbot, Aisne, King Cole, Berenguela, Sweet Lavender, Nibbe, Alos, Mon Essai, Garnet, Cognac, Jean qui rit, Aldus, Gazeley.

Third Class.—Kim, Lehte, Nona, Sardine, Topsy, Yvonne, Little Rosy, Néarque, One who knows, Jehelmannie, Nunquam non, Decima, Pip, G.G., N.M., Pellet, Rieu, A.A.M., Dépaysée, W.O.C., Ventnor, Soufflet, Spes, G.B.B., Gloucester, S.N.Y., Red Indian, Vidite, Scipio.

Fourth Class.—Marcella, Lodge, Mike O'Leary, Clearchus, Brentwood, Ponthieu, Surrah, Jack Johnson, Bishop, D., Hannibal, St. Andrews, Penarth, A.E.J.C., Jean, Athalie.

Fifth Class.—Pittsburgh, Malancourt, Strike, Fourth Form, L.A.T., Herga, Wilts, Pale, Lent lily, Undine, Girlie, Pat, Alice.

Last month's passage for translation was from Zola's *Germinal*, the fifth, and perhaps! the most striking, of the famous "Rougon

(Continued on page 232.)

G. BELL & SONS, LTD.

*The Standard Life of Napoleon.***THE LIFE OF NAPOLEON I.** By

J. HOLLAND ROSE, Litt.D., Reader in Modern History, University of Cambridge. *New, Cheaper, and Revised Edition.* Small Demy 8vo, 1,126 pp. With Portrait, and numerous Maps and Plans. Price 6s. net.

THE TIMES.—"To say that Mr. J. H. Rose has written the best life of Napoleon yet published is but faint praise, far less than he deserves, often as the task has been attempted. . . . Mr. Rose seems to have read everything bearing on his subject, and he discriminates wisely as to the value of the authorities. In particular he has for the first time thoroughly explored the English Foreign Office Records. . . . We do not know where else to find a series of great military operations described so well and also so concisely."

New and Cheaper Reissue of

Dr. ROSE'S LIFE OF PITT.

2 Vols. Medium 8vo. With Photogravure Plates.

7s. 6d. net each.

VOL. I.—WILLIAM PITT AND NATIONAL REVIVAL.

VOL. II.—WILLIAM PITT AND THE GREAT WAR.

THE JOURNAL OF EDUCATION.—"Worthy to be classed among the best of our scientific histories ; it is based on a thorough examination of authorities, both in print and in manuscript, and a critical use of them. . . . A pleasant feature is the large amount of personal detail. Dr. Rose excels in characterization, and the persons whose doings he records are not mere names to be remembered, but are made alive for us ; while what he tells us about Pitt's friends helps us to learn more about Pitt himself."

THE REVOLUTIONARY PERIOD IN EUROPE (1763-1815). By HENRY ELDRIDGE

BOURNE, Professor of History in Western Reserve University. Demy 8vo, 502 pp. With 8 Maps.

Price 7s. 6d. net.

SCHOOL WORLD.—"Professor Bourne is a master of the records of one of the most intricate and important periods of European history. . . . Those who are looking for a good introduction to the study of the critical half-century from the Peace of Paris to the Peace of Vienna will find this handbook, with its copious supply of excellent maps, distinctly useful."

ENGLISH ECONOMIC HISTORY.

Select Documents. Compiled and Edited by A. E. BLAND, B.A., of His Majesty's Public Record Office ; P. A. BROWN, M.A., Lecturer in the University of Durham ; and R. H. TAWNEY, B.A. Crown 8vo, 750 pp. Price 6s. net.

SCHOOL WORLD.—"An indispensable work of reference to all students of economic history."

THE JOURNAL OF EDUCATION.—"The rapid growth of interest in social and economic history abundantly justifies the publication of this important work. . . . Altogether this is a most useful and informing book, well deserving careful study. It throws a strong light on the present, and explains much that is not readily understood."

*New Volume of Mr Rogers' Aristophanes.***THE CLOUDS AND WASPS OF ARISTOPHANES.** The Greek Text, Revised, and

a Metrical Translation on opposite pages, with Introduction and Commentary. By BENJAMIN BICKLEY ROGERS, M.A. Fcap. 4to. 15s. Also the Two Plays separately, 10s. 6d. each.

SPECTATOR.—"Mr. Rogers's translation of Aristophanes belongs not merely to scholarship, but to literature as well. It is impossible to turn to a single page that has not its happy touch, its fertile invention ; and the accuracy wherewith Mr. Rogers represents the changing metres of the Greek poet is amazing."

THE TEACHING OF HISTORY

IN ELEMENTARY SCHOOLS

By **R. L. ARCHER, M.A.,**

PROFESSOR OF EDUCATION IN UNIVERSITY COLLEGE, BANGOR;

L. V. D. OWEN, B.A.,LECTURER IN HISTORY IN THE UNIVERSITY
OF SHEFFIELD;

AND

A. E. CHAPMAN, B.A.,ASSISTANT LECTURER IN THE UNIVERSITY
COLLEGE OF NORTH WALES, BANGOR.PRICE **3/6** NET.

THIS is intended as a companion volume to "The Teaching of Geography in Elementary Schools," by R. L. Archer, W. J. Lewis, and A. E. Chapman. The whole conception of historical teaching at the elementary stage has become more living of late years, and the need of a treatment which will give a vivid impression of periods, movements, and men, rather than a jejune succession of facts, is emphasized in the Board of Education's revised Suggestions to Teachers. Part I of the present volume attempts to show how such a treatment can be secured, both by choice of material, arrangement of syllabus, and methods of presentation; while Part II gives hints on each particular period of English history, laying particular stress on recent changes in the attitude of historians to the broad features of each period and the sources to which the teacher can go to obtain the kind of information required to secure such a treatment as is suggested in the earlier chapters of the book.

Macquart" series. It describes the final catastrophe of Le Voreux, the mining centre exploited by a company which ruthlessly sweats its employés, who are driven in desperation to wreck the mine by flooding it and tampering with the machinery, and general sabotage. The military are called in to suppress the strike. Most went astray over the technical phrases. *Les dernières constructions* is "the recently erected buildings." For *salle de recette* see Littré under *recette*: "recette ou salle de recette, lieu où l'on manipule le charbon à mesure qu'il arrive pour le trier et le classer." *Râlait*: "was at its last gasp." *Boulet* was too often mistaken for "balle," even by the better sort. *Disloquée sur son massif*: "dislodged from its foundation." *Elle marcha*: "it began to move, extending its connecting rod like a giant's knee as if to rise to its feet, but this was a dying effort; it sank down shattered and swallowed up." (Note change to imperfect.) *On croyait*: "it looked as if about to disappear in a cloud of dust." *Bue par la terre*: "as if sucked up in a quicksand." *Cierge* is, of course, "the altar-candle," not "candle" by itself.

A Prize of Two Guineas is offered for the best translation of the following passage from Cicero's Tusculan Disputations:—

Quamquam hic quidem tyrannus ipse iudicavit quam esset beatus. Nam cum quidam ex eius adsentatoribus, Damocles, commemoraret in sermone copias eius, opes, maiestatem dominatus, rerum abundantiam, magnificentiam aedium regiarum, negaretque unquam beatiorem quemquam fuisse: "Visne igitur," inquit, "O Damocle, quoniam te haec vita delectat, ipse eandem degustare et fortunam experiri meam?" Cum se ille cupere dixisset, collocari iussit hominem in aureo lecto strato pulcherrimo textili stragulo, magnificis operibus picto, abacosque complures ornavit argento auroque caelato. Tum ad mensam eximia forma pueros delectos iussit consistere eosque nutum illius intuentes diligenter ministrare. Aderant unguenta, coronae; incendebantur odores; mensae conquisitissimis epulis exstruebantur. Fortunatus sibi Damocles videbatur. In hoc medio apparatu fulgentem gladium e lacunari saeta equina aptum demitti iussit, ut impenderet illius beati cervicibus. Itaque nec pulchros illos ministratores aspiciebat nec plenum artis argentum nec manum porrigebat in mensam; iam ipsae defluebant coronae: denique exoravit tyrannum ut abire liceret, quod iam beatus nollet esse. Satisne videre-

tur declarasse Dionysius nihil esse ei beatum cui semper aliqui terror impendat.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners will be required to send real names for publication.

All competitions must reach the Office by April 15, addressed "Prize Editor," THE JOURNAL OF EDUCATION, 3 Broadway, Ludgate Hill, E.C.

Translations sent with an addressed and stamped envelope and six penny postage stamps will be returned corrected. Foreign postage stamps are not accepted.

Translations will not be returned unless both these conditions are complied with.

ON March 10, at the Royal Albert Hall Theatre, Miss Elsie Fogerty gave a lecture-demonstration of Rhythmic Training in Physical movements as studied by her students in her school of Speech Training, Drama, and Dancing. It is always interesting to watch the evolution of new adaptations to suit special conditions. Miss Fogerty gave a most illuminating lecture on her views as to the training in movement needed especially by those who are going on the stage. She made some very sound criticisms of existing defects in training, and able suggestions as to their remedy. That the illustrations did not quite reach the level of Miss Fogerty's theory is not perhaps to be wondered at in an experiment which is still in its early stages. It is improbable that the discontinuous and professedly unrhythmical exercises of the Swedish system can be made rhythmical by any mellow monotone or other devices of the teacher without spoiling all the remedial value they really possess. The fault of the dancing of various kinds seemed to lie almost entirely in the fact that the movement was accompanied by music, often far from the best; it was not a response to the music, nor an integral part of it, and hence it was often unrhythmical and lacking in spontaneity. The demonstration ended with an exceedingly well acted little wordless play. Miss Ruby Ginner most cleverly impersonated Pierrot, but perhaps the honours of the evening may be accorded to the very youthful Columbine, who charmed everyone by her joyousness and grace. We shall watch with interest the further developments of Miss Fogerty's scheme.

Holiday Quarters.

These School and Teachers' Advertisements are continued from page 233.

ENGLISH LECTORSHIP AT THE UNIVERSITY OF UPSALA

will become vacant July 1, 1916.

Qualifications.—The Lector must be born of English parents and have received a liberal English education. He should speak educated Southern English without any provincial accent. Knowledge of Swedish not necessary, but preference given to Candidates possessing some knowledge of a Scandinavian Language or German. Some previous practice in teaching English necessary, at any rate desirable. Age about 25 to 30. Preferably unmarried.

Duties.—Public lessons six hours weekly during the two terms (September 1 to middle of December, and middle of January to end of May). Private Lessons when required by Students. Practical Instruction in Pronunciation, Conversation, Reading, and Translation into English. With regard to his Public Courses, the Lector is bound to take the advice of the Professor of English.

Emoluments.—3,000 Kronor (£165) a year, paid quarterly. Private lessons, of course, paid extra. The Lector may reckon on earning altogether 3,500 to 4,500 Kronor a year, depending on his own exertions.

Engagement.—The Lector will be engaged for two years (July, 1916, to June, 1918). Appointment may be renewed for some years more, in case of mutual satisfaction, but it is expressly stated that the Lectorship cannot be held for life.

Applications, testimonials, and references to be sent to Professor ERIK BJÖRKMAN, Upsala, Sweden, before May 1 next.

BEDFORD COLLEGE FOR WOMEN. (UNIVERSITY OF LONDON.) REGENT'S PARK, LONDON, N.W.

DEPARTMENT OF GEOLOGY AND GEOGRAPHY.

The Council will shortly proceed to appoint an **ASSISTANT LECTURER in GEOGRAPHY.** The appointment will take effect as from September 1st next. The salary offered is £200 a year non-resident.

Six copies of applications and of not more than three recent testimonials should be sent not later than April 29th, to the **SECRETARY OF COUNCIL,** from whom further particulars may be obtained.

trict and has ample grounds with facilities for
Games. The Pendleton High School, like the sister
School in Manchester, is endowed from the Hulme
Trust, and receives grants from the Board of Educa-
tion and from the Royal Borough of Salford. Ap-
plications, which should state age, experience, and
qualifications, accompanied by not more than five
testimonials, must be sent, not later than 1st May,
to the Clerk to the Governors, Mr. HUBERT TRAGUE,
38 Barton Arcade, Manchester, from whom further
particulars may be obtained.

TORQUAY SECONDARY

SCHOOL.—Wanted, for Girls' Department,
to commence May 4th next, an ASSISTANT MIS-
TRESS specially qualified in Mathematics. Ap-
plications must state other subjects offered. Salary
according to scale, which may be obtained, together
with application form, of the CLERK TO THE GOVER-
NORS, Education Office, Torquay.

EDINBURGH ASSOCIATION FOR THE PROVISION OF HOSTELS FOR WOMEN STUDENTS.

The Board of Management of the Edinburgh Asso-
ciation for the Provision of Hostels for Women Stu-
dents are about to proceed to the appointment of
a PRINCIPAL LADY WARDEN for their new
Hostels situated at Craigmillar Park, Newington,
Edinburgh. The Hostels, three in number, have
each accommodation for 52 students. The Lady
Warden should be possessed of high administrative
capacity and tact, and, other qualifications being
equal, preference will be given to a lady with a Uni-
versity degree who has had experience of residence
in a College or Hostel.

The salary will be at the rate of £250 per annum,
with board and residence in one of the Hostels.

Candidates are requested not to call on individual
members of the Board of Management.

Application should be made on a prescribed form,
and accompanied by 20 copies of three recent testi-
monials and a letter giving additional details of quali-
fications.

Printed or type-written copies of letter and testi-
monials should be lodged with the INTERIM SECRE-
TARY, Edinburgh Association for the Provision of
Hostels for Women Students, Moray House, Edin-
burgh, not later than 15th May next, from whom may
be obtained forms of Application and Statement of
the Duties of the Office and Conditions of Appoint-
ment.

GIRLS' COLLEGIATE SCHOOL, PIETERMARITZBURG, NATAL.

TRESSES, to begin work as soon as possible.

1. DOMESTIC SCIENCE MISTRESS with
special subjects: Cookery, Dressmaking, Needle-
work. Training and experience essential. Salary £90,
£100 and £110 in three successive years.

2. JUNIOR FORM MISTRESS, usual English
subjects and Arithmetic up to Lower Third standard,
Nature Study and either Sewing or Ablett Drawing.
Salary £70, £80 and £90 in 3 successive years.

The School is Boarding and Day under a Commit-
tee. Board and residence during holidays if desired.
Passage out paid.

Apply, with copies of testimonials, names of personal
referees and particulars of age, religious denomina-
tion, qualifications, and experience, to Mrs. STEWART,
M.A., 14 Carlton Street, Edinburgh.

BRADFORD EDUCATION COMMITTEE.

Wanted, after Easter, an ASSISTANT MIS-
TRESS for the Belle Vue Girls' Secondary School.
Preference will be given to a Graduate with special
qualifications in Mathematics. French or History
and English will be considered additional qualifica-
tions. Salary according to qualifications and ex-
perience. Applications, on forms to be obtained
from this Office, should be returned to the DIRECTOR
OF EDUCATION at once.

By Order.

Education Office, Town Hall, Bradford.

March 24, 1916.

**THE
BERGMAN ÖSTERBERG
PHYSICAL TRAINING COLLEGE,
DARTFORD HEATH, KENT.**

Trustees:

Sir GEORGE NEWMAN, M.D. (Chairman).
Major WALDORF ASTOR, M.P.
Dr. CHRISTOPHER ADDISON, M.P.
Lord SHAW OF DUNFERMLINE.
The Marchioness of SALISBURY.

Principal:

Miss M. H. MEADE, B.A. (Moral Sciences Tripos).

Vice-Principal:

Miss A. WIKNER (Royal Cent. Inst. of Gymnastics, Stockholm).

The College was opened in 1885, and was the first of its kind in England. Students are prepared to be teachers of Scientific Physical Education on Ling's Swedish System. The Course extends over two years. It includes the study of Anatomy, Physiology, Theory of Education; the Theory and Practice of Gymnastics, Massage and Medical Gymnastics, Dancing and Outdoor Games. Students practise teaching in schools in the neighbourhood. The College stands in its own ground of 15 acres, in a beautiful and healthy locality close to Dartford Heath.

The demand for mistresses of physical training holding the Diploma of this College is at present far in excess of the supply.

The course begins in September. Further particulars may be obtained on application to the SECRETARY.

**BERGMAN ÖSTERBERG
UNION OF TRAINED GYMNASTIC TEACHERS.**

Ling's Swedish System.

Aim of the Union: To advance the cause of Physical Education on scientific lines.

In placing members of this Union as Teachers in Schools, careful and discriminating choice is exercised, and the exact requirements of each School specially considered.—PHYSICAL TRAINING COLLEGE, DARTFORD HEATH, KENT.

SOUTHPORT PHYSICAL TRAINING COLLEGE.

Beautifully situated near the Sea in healthy surroundings.

President:

Admiral Lord CHARLES BERESFORD, K.C.B., M.P.

Principals:

A. ALEXANDER, F.R.G.S.; Mrs. ALEXANDER.

The Staff consists of Medical Lecturers and experienced teachers in every branch of Physical Training, including a Swedish Mistress from the Royal Gymnastic Institute, Stockholm.

GIRLS of good education are trained as scientific teachers of Physical Training to qualify them for appointments as Gymnastics, Games, and Health Mistresses in schools and colleges. The course, extending over two years, includes:—Physiology, Anatomy, School Hygiene, First Aid and Sick Nursing, Remedial Exercises and Massage, Swedish Educational Gymnastics (Ling's System), Outdoor Games (Hockey, Net-Ball, Cricket, Tennis, Badminton, &c.), Dancing (including Old English and Morris Dances), Swimming and Rowing, Organized Recreative Games for School and Play-ground.

Diplomas and Gold Medals are awarded to successful students.

The demand for capable teachers of Physical Training is steadily increasing, and students of this College frequently obtain appointments before completing their training.

HEALTH STUDENTS.

Cases of spinal curvature or general physical weakness are received in residence, and treated under medical supervision.

The Senate Edition.

"La Guerre," Vol. II. A French Reader, compiled from articles upon the European War selected from the leading French Newspapers. With Notes on Idioms by TAYLOR DYSON, M.A. 10d
The subject matter of this Reader, from its retaining interest, leads the student unconsciously to a better knowledge of modern French construction. Many of the articles are of a conversational nature, and of the greatest value as supplying a means of acquiring a fuller vocabulary and a better knowledge of the subtleties of the language. Volume I is in use at all the great Public Schools.

THE SCHOOL AND SOCIETY

(REVISED EDITION, GREATLY ENLARGED)

By **JOHN DEWEY**,
Professor of Philosophy in Columbia University.

12mo.

Cloth.

pp. xvi+164.

Price 4s net

University of Chicago Press.

"Mr. Dewey has been recognized for some time now as the outstanding figure in educational reform in America. . . . 'The School and Society' was first published in 1900, and has been many times reprinted since. It is now revised, and enlarged by the addition of some valuable notes on child-psychology. When the book first appeared Dewey was already known among scholars as a philosopher of great promise, and had been invited to join the brilliant band of teachers who were attracted to the University of Chicago in the early nineties. He set about to establish what he called an 'experimental' school; he also called it an 'elementary' school, but this term would mislead an Englishman, for the general aims of the enterprise were much more nearly allied to those of the King Alfred School in London than to those of English elementary schools. In 'The School and Society' Professor Dewey expounded to parents and supporters of this school the principles on which he conceives the schooling of children should be based. . . . He speaks as a man of science and a thinker, to a thinking public. . . . Those who regard the business of education as a search for truth will find in his writings a provocation to study, unexampled among the teachers of this generation."—*Times*

An Anthology of the Poetry of the Age of Shakespeare.

Chosen and arranged by W. T. YOUNG, M.A., Lecturer in English Language and Literature at the University of London, Goldsmiths' College. Crown 8vo. 2s 6d net

"Here we have a whole world discovered in the round of Elizabethan life in town and in country: a mirroring of those 'spacious times' that yields the most faithful evidence of their multiform activities. . . . An anthology as excellent as the anthology of Elizabethan poetry compiled by Mr W. T. Young."

OCCASIONAL NOTES.

THE increase in the income-tax will press hardly upon men of moderate means with children to educate, and we are not surprised that there have been many protests in the papers. With

The Budget.

these we have every sympathy. The levy of income-tax is full of anomalies, and one of the most crying is the very slight relief given to married people with children. No great change can be expected in War time, but we hope that when peace returns the difference between the tax paid by childless people and that levied on those with families will be made much greater. This, however, is not the sole direction in which fathers should look for relief. Many of them have the matter to some extent in their own hands. They can avoid sending their sons to expensive boarding schools. More use must be made of day schools. When a paterfamilias writes that, of his modest £400 a year, he is paying £200 for the education of two sons, we feel that something is wrong. He could probably get them as good an education for £150, even if he is out of reach of a day school. Others complain of the costliness of a University education. The remedy for that is the reduction of the expense of living at Oxford and Cambridge. One result of the War, we hope, will be a strong movement for the simplification of life all the way up—in preparatory schools, public schools, and Universities.

ANOTHER result that we look for is an increase in the number of secondary day schools and an improvement in their quality. The higher schools in provincial towns of the second and third rank in especial present a problem that needs careful consideration. In a given

town there may be perhaps two hundred boys whose parents require for them the best secondary education—an education which will prepare them for the Universities, the technical colleges, the professions, and the higher grades of commercial life. The link with Oxford and Cambridge must be maintained—not merely for the sake of a few clever boys or to give social prestige, but because it is a stimulus to the whole intellectual life of the school. The disproportionate number of scholarships given for classics at Oxford and Cambridge compels the maintenance of a high standard of classical teaching. Modern languages and science are becoming more and more necessary. But the schools we have in mind are neither large enough to organize two or three different "sides," nor rich enough to provide good teachers in all subjects. In trying to do everything they frequently fail to do anything really well. They become Jacks of all trades, but masters of none. They would probably do much better if each could drop the higher teaching of one of the three great branches—classics, science, and modern languages—and concentrate on the other two, the few boys who required what could not be supplied being sent on by scholarships to another school. Such a scheme would require two things—first, the necessary scholarships, and, secondly, the adoption by the head masters of a self-denying ordinance which would bind them to encourage the transfer of boys whose educational needs demanded it.

THE above remarks apply to some extent to the education of girls, but in this case the problem is less complex, because their needs are less diverse. What we

The Girls.

fear as the result of the heavy income-tax is that fewer girls will be sent to school, and that those who are sent will be kept there a shorter time. Against such a deplorable possibility nothing can avail but the better education of fathers and mothers in the need for schooling for their daughters. The War should have done much to open their eyes. The great part women are playing in the struggle, the multiplicity and variety of the functions they have undertaken, the spirit of keenness, devotion to duty, and discipline they have shown, and the large measure of success which they have achieved ought to give the final death-blow to the old idea that their sphere of work can be limited to a few particular occupations. The most old-fashioned amongst us must surely agree that no precise bounds can be set to their capacities and powers. It follows that those powers ought to be given every chance of development, and that means more education, not less.

THE President of the Board of Education has appointed a Departmental Committee to consider the question of interrupted education, as we may briefly call it. The Committee is certainly needed.

Interrupted Education.

A considerable number of boys and girls have been removed from school before the normal age to assist in agriculture, and here and there in other work. A far larger number have gone straight from school to munition factories, where they are earning abnormally high wages. Many of these will find themselves stranded when the munitions works are closed down. So also will many others all over the country who are taking the place of men that have enlisted. The severe dislocation of our educational and industrial system caused by the diversion of some millions of men

to the army cannot but have serious consequences. The whole problem of education for the working classes during adolescence will have to be faced, and there is no more difficult problem in the whole realm of education.

WE welcome the Committee, but we are surprised at its constitution. It consists of five members of Local Authorities, a Trade Union Secretary, a Director of Education, and one or two other gentlemen, together with five officials from the four Government departments concerned. There is not a single teacher of any sort or kind upon it, nor, as far as we know, a single person who has ever been a teacher. The technical education of a host of boys and girls is one of the problems that will have to be discussed, but there is no one connected with technical education on the Committee. Experts have evidently been ruled out. No one with first-hand knowledge of the questions to be considered is wanted. It is true that there are two officials of the Board of Education and that one is the head of the technical branch of the Department, but unfortunately he is a gentleman who is better known for his contributions to the study of English literature than for his acquaintance with the training necessary for industry. In any case, it is not merely the bureaucratic view that is wanted, it is much more the view of the craftsman. In any sphere but education, such exclusion of the expert would be impossible. Imagine a committee to discuss the settlement on the land of discharged soldiers which did not contain anyone who had a first-hand knowledge of agriculture!

A PROTEST from the Head Mistresses' Association against the retrenchments in educational expenditure which are being made by Local Authorities, has appeared in the Press. It is stated that in many cases these reductions are made mainly on the education estimates, and, what is graver still, that this curtailment is effected largely by reducing staff and increasing the size of the classes. In most cases, the Head Mistresses declare, those directly responsible for the working of the school have not been consulted. A cast-iron scheme has been imposed upon all schools alike, the representations even of governing bodies being treated with complete indifference. Evidently the amateur is finding full scope for his talents on some of the committees, and what the amateur cannot understand is that a school staff is not like a body of servants in a big house, which the mistress can easily increase one year and diminish the next, as suits her purse and her convenience. The organization of a school is a thing of slow growth, a structure which it is easy to pull down, but difficult to build up. The size of classes in secondary schools, it is to be noted, is subject by the regulations of the Board to limitation, thirty-five being the largest number of children who under any circumstances may be taught together. Mr. Cholmeley, on behalf of the Head Masters' Association, has backed the mistresses up, and shown that the London County Council reduction on education is proportionally three times as great as their reduction in other branches of expenditure. The same note of alarm is sounded in a letter from a number of distinguished ladies, who well say that education has proved to be the Achilles' heel of England.

THE announcement in the press that Canon Lyttelton was resigning the Head Mastership of Eton after the summer term came as a surprise only to outsiders.

**The
Head Mastership
of Eton.**

Like his father, the famous classical scholar who was bracketed Senior Classic with C. J. Vaughan in 1858, he was a scholar of Trinity College, but won more fame as a cricketer than as a scholar, captained the University eleven, and was content with a Second Class in the Tripos of 1878. After a brief apprenticeship at Wellington College, he was appointed to a mastership in his old school in 1882, and in 1890 succeeded Mr. Robertson as Head Master of Haileybury. His reign at Haileybury was a mixed success, and his election to Eton, on the resignation of Dr. Warre in 1905, with such formidable rivals as Mr. Rawlins of Eton, Mr. Cyril Alington, now of Shrewsbury, and Mr. Lionel Ford of Harrow, was unexpected by Old Etonians or by the profession generally.

GREAT hopes were entertained of the reforms he was prepared to introduce into the most conservative of our great public schools. He had made himself the champion of the democratic Teachers' Guild; had espoused the cause of parents, and particularly of mothers; had set himself to the herculean task of reforming public-school morals by instruction in matters of sex; but he has hardly fulfilled the promise of his youth, and has, by some of his most ardent admirers, been described as the *roseau peint en fer*. To Latin verse he clung even more tenaciously than Dr. James of Rugby, demanding it as the one thing needful for secondary schools. Though a member of the Humanitarian League he still defended that time-honoured abuse, the Eton Beagles, in a heated newspaper correspondence, and recently by a sermon preached at the beginning of the War he spoke unadvisedly with his lips, though, in our opinion, he was fully justified in his main contention that nothing our enemies might do could supersede the lessons of the Sermon on the Mount. We see no reason to doubt the explanation of his decision given to the press that he felt the time had come to change his vocation by modern standards. He is still in the prime of life, and has still before him many years in another, if not a higher, sphere. Yet we cannot help asking what would be thought of a great physician who, at the age of sixty, announced his intention to take Holy Orders. Teaching has still to be made a separate profession. Eton threatens to be a school without rulers. The Provost, to the delight of all Old Etonians, has recovered from his serious operation, but is still confined to his sick chamber. The Vice-Provost, Mr. Warre Cornish, has sent in his resignation.

WE wonder when modern-language teachers are going to lift up their voice. The Civil Service Commissioners play the stepmother to modern languages quite as much as to physical science—at least, so far as the examination for the first division of the Service is concerned. An examination of the marks gained in the last examination held before the War shows this. There appear to have been 78 successful candidates, and of these only two gained really good marks in modern languages. Thirty-one candidates were successful, without the help of classics (which shows that classics is not

in Civil Service
Examinations.**

altogether the greedy monopolist it is sometimes supposed to be), but almost all of these evidently relied either upon mathematics and science or upon mathematics, with history and some abstract science to carry them to victory. It is true that 22 candidates took French, but they took the first paper only, which is merely composition and translation, and carries only 400 marks. Only five essayed the second part, a fact which is not surprising, seeing that an acquaintance with a large area of French literature is required, and a beggarly 200 marks is the price offered for this extensive knowledge. The candidates who did anything in German or Italian are not worth counting. We are glad to note that political science and political economy are popular, and history has a fair number of adherents, but in most cases these subjects are evidently regarded as only tributary streams. One would think that a knowledge of two modern languages, with a reasonable portion of their literatures, and of modern history and two abstract sciences, would be a pretty good equipment for a Civil Servant; but a young man with such an outfit as this would find great difficulty in getting past the turnstile.

THE table of marks gained by the candidates for the diplomatic service at the same date shows some remarkable features. There were six aspirants, two of whom were successful. Their success was purchased at a cheap rate, for neither got one-third marks of the possible maximum. The only subjects in which either made a respectable score were the three languages—French, Spanish, and German, and those scores were made in translation, conversation, and composition only, for only one candidate took a paper in literature, and on that paper he got 66 marks out of 200. For English and Foreign History the leader got just 25 per cent. of the maximum, the second candidate nothing. In Politics and Political Economy neither gained a mark. Evidently, beyond their languages, these two budding diplomats knew next to nothing, and of their languages they knew merely the linguistics. And these are samples of the men to whom our diplomacy is entrusted! It is not surprising that that diplomacy is not always a success. The performances are discreditable alike to the candidates and to the schools and colleges which educated, or rather failed to educate, them. The result, no doubt, is due largely to the fact that diplomacy is still a close preserve for young gentlemen whose fathers can provide them with a substantial private allowance. If the service was open to all, the poor clever boy would soon send up the price of entrance. We ought to have said that the maximum age limit for the examination is twenty-five.

A SUMMARY of a striking address delivered to young officers in the field by a senior officer has been published. The key-note of the whole is that knowledge is needed by the officer as well as character. Knowledge is, indeed, put first, even before character. You cannot lead unless you know what to do and how to do it. Loss and disaster are the sure consequences of ignorance. Men can have no confidence in an officer who does not know, nor can the officer have any confidence in himself. And this knowledge is no Heaven-sent gift; it can be gained only by hard work, study, and thought. Excellent advice; but why should it be given to boys only when

they are officers in the field? Knowledge is one of the foundations of success in peace no less than in war, in manufacturing, trading, social work, and government no less than in fighting. The weak point of the great public schools is their indifference to this gospel of knowledge. The masters do not preach it. The cabinet minister, bishop, or local magnate who gives an address on Speech Day does not preach it. Usually he expounds only the other half of the officer's doctrine, lets boys believe that nothing is required for success but character, and with subtle flattery allows ignorant youngsters to think that they are all that any one can wish them to be because they are good fellows. But the subalterns in France are learning otherwise. They are face to face with most terrible realities of life, and they are discovering that something more than *esprit de corps* is required if they are to be successfully confronted. The public-school boy knows that that is true, even where football and cricket are concerned, but he does not know that it is equally true of industry, diplomacy, politics. Nobody tells him that in every sphere of life you cannot lead unless you know what to do and how to do it; that loss and disaster are the sure consequences of ignorance; that men can have no confidence in a chief who does not know, and the chief can have no confidence in himself.

AN ingenious writer, whose identity it is not difficult to divine, has been writing in the *Times* about speech and literature. The question he sets out to investigate is how it is that we English who can be so eloquent in poetry are so little eloquent in speech. His argument is not free from obscurity, but the pith of it seems to be that most people can be eloquent in speech only at the cost of saying what is commonplace, and therefore not worth saying, and that English people do not care about listening to the commonplace, however well it is expressed. It is just because we have so much first-rate eloquence in prose and poetry that we care so little for the third-rate eloquence of the average platform speaker and the average conversationalist. Fine speech is to us nothing but imitation literature, and imitation literature we cannot abide. Speech, he says, is our national art, "the folk-song of our literature." This is enigmatic, and reads like wilful and perverse paradox, but what he appears to mean is that we really value speech only when it tells us something or gives us some new ideas. The writer esteems this national characteristic, and, indeed, goes so far as to say that he hopes we shall never become a nation with a command of language, for that would kill our "folk song."

PUT in brief, this seems to mean that the Englishman cares little for the arts of speech and writing, but a good deal for what is said or written. The theory of a connexion between lack of conversational power and respect for great literature will not stand the test of a comparison with, say, the French; for literature is the national art of France far more than of England, but we find that Frenchmen display just the same qualities—and frequently the same defects—on the platform and in the drawing-room as in their books. There is the same eloquence, the same ease, the same careful choice of words, the same clearness of thought. The truth is rather that the Englishman does not appreciate the technique of speech or writing as does the Frenchman. Good style

and well chosen phraseology give him no great pleasure. He reads books and listens to speeches for the sake of their substance, and if they have no substance, or only such substance as he has in his own mind already, he despises them. It is, on the whole, a healthy taste, as we often think when we see writers on education commend to English teachers the practices of French schools in the teaching of composition.

ENGLISH people, we are continually being told, lack the faculty of self-expression, and therefore children ought to be trained in self-expression. But here comes a problem. If writing is to be genuine self-expression, the child must write only when he really wants to express something; he must not write at the order of somebody else, for if he does, he will write artificially, inventing instead of expressing ideas and feelings. If he feels nothing about a primrose except that it is a yellow primrose, we must not expect him to say more. We should not encourage eloquent description and pretty sentiment which the child feels no real impulse to give us. We are inclined to judge from some school books which we have recently seen that there is a real danger of teachers fostering this kind of artificial composition. The value of it is certainly problematic. Perfect sincerity in speech and writing is more to be desired than facility of utterance. We shall not gain anything by training up a generation which can write graceful conventionalities about anything and everything. Rather we should teach boys and girls that the first rule of writing is: never write unless you really want to say something. Huxley we think it was who said that there was only one good rule for style: have something to say and then say it—an epigram which, if not adequate for the needs of the teacher, is a very solid foundation-stone.
